## The Constitution of India Chapter IV A

## Fundamental Duties

## ARTICLE 51A

Fundamental Duties- It shall be the duty of every citizen of India-
(a) to abide by the Constitution and respect its ideals and institutions, the National Flag and the National Anthem;
(b) to cherish and follow the noble ideals which inspired our national struggle for freedom;
(c) to uphold and protect the sovereignty, unity and integrity of India;
(d) to defend the country and render national service when called upon to do so;
(e) to promote harmony and the spirit of common brotherhood amongst all the people of India transcending religious, linguistic and regional or sectional diversities, to renounce practices derogatory to the dignity of women;
(f) to value and preserve the rich heritage of our composite culture;
(g) to protect and improve the natural environment including forests, lakes, rivers and wild life and to have compassion for living creatures;
(h) to develop the scientific temper, humanism and the spirit of inquiry and reform;
(i) to safeguard public property and to abjure violence;
(j) to strive towards excellence in all spheres of individual and collective activity so that the nation constantly rises to higher levels of endeavour and achievement;
(k) who is a parent or guardian to provide opportunities for education to his child or, as the case may be, ward between the age of six and fourteen years.

## PLEDGE

India is my country. All Indians are my brothers and sisters.

I love my country, and I am proud of its rich and varied heritage. I shall always strive to be worthy of it.

I shall give my parents, teachers and all elders respect, and treat everyone with courtesy.

To my country and my people, I pledge my devotion. In their well-being and prosperity alone lies my happiness.

## Preface

Dear Students,
Welcome to the tenth standard!
This year you will study two text books - Mathematics Part-I and Mathematics Part-II

The main areas in the book Mathematics Part-I are Algebra, Graph, Financial planning and Statistics. All of these topics were introduced in the ninth standard. This year you will study some more details of the same. The new tax system, GST is introduced in Financial planning. Wherever a new unit, formula or application is introduced, its lucid explanation is given. Each chapter contains illustrative solved examples and sets of questions for practice. In addition, some questions in practice sets are star-marked, indicating that they are challenging for talented students. A fter tenth standard, some students do not opt for Mathematics. This book gives them basic concepts and mathematics needed to work in other fields. The matter under the head 'For more information' is useful for those students who wish to study mathematics after tenth standard and achieve proficiency in it. So they are earnestly advised to study it. Read the book thoroughly at least once and understand the concepts.

Additional useful audio-visual material regarding each lesson will be available to you by using Q.R. code through 'App'. It will definitely be useful to you for your studies.

Much importance is given to the tenth standard examination. You are advised not to take the stress and study to the best of your ability to achieve expected success. Best wishes for it !

(Dr. Sunil Magar)

Pune
Date: 18 M arch 2018, Gudhipadva
Indian Solar Y ear : 27 Falgun 1939

Director
M aharashtra State Bureau of Textbook Production and Curriculum Research, Pune.

It is expected that students will develop the following competencies after studying Mathematics- Part I syllabus in standard X

| Area | Topic | Competency Statements |
| :---: | :---: | :---: |
| 1. Knowledge of numbers | 1.1 A rithmetic Progression | The students will be able to- <br> - solve examples using Arithmetic Progression. <br> - plan steps to achieve a goal in future. |
| 2. Algebra | 2.1 Quadratic Equations <br> 2.2 Linear equations in two variables | - solve day to day problems which can be expressed in the form of quadratic equations. <br> - decide the number of variables required to find solutions of word problems. <br> - convert a word problem into an equation in two variables and find its solution. |
| 3. Commercial Mathematics | 3.1 Financial planning | - understand the concepts of savings and investments. <br> - get familiar with financial transactions in business, profession etc. |
| 4. Statistics and Probability | 4.1 Probability <br> 4.2 Graph <br> and measures of central tendencies | - use the concept of probaility in games, voting etc. <br> - present the collected data in the form of graphs or pictures deciding the suitable form of presentation. <br> - find the mean, median and mode of a provided classified data. |

## Instructions for Teachers

Read the book in detail and understand the content thoroughly.Take the help of activities to explain different topics, to verify the formulae etc.

Practicals is also a means of evaluation. Activities given can also be used for this purpose. Encourage the students to think independently.Compliment a student if he solves an example by a different and logically correct method.

## List of some practicals (Specimen)

1. On a graph paper, draw a line parallel to the X - axis or Y - axis. W rite coordinates of any four points on the line. $W$ rite how the equation of the line can be obtained from the coordinates.
[Instead of parallel lines, lines passing through the origin or intersecting the X or Y - axis can also be considered]
2. Bear a two- digit number in mind. Without disclosing it, cunstruct a puzzle. Create two algebraic relations between the two digits of the number and solve the puzzle.
[The above practical can be extended to a three-digit number also.]
3. Read the information about contents on a food packet. Show the information by a pie diagram. For example, see the chart of contents like carbohydrates, proteins, vitamines etc. per given weight on a buiscuit packet. Show the proportion of the contents by a pie diagram. The contents can be divided into four classes as carbohydrates, proteins, fats and others.
4. Prepare a frequncy distribution table given by the teacher in Excel sheet on a computer. From the table draw a frequency polygon and a histogram in Excel.
5. Roll a die ten times and record the outcomes in the form of a table.
6. Observe the tax invoice given by your teacher. Record all of its contents. Recalculate the taxes and verify their correctness.
7. Calculate the sum of first $n$ natural numbers given by your teacher through the following activity. For example to find the sum of first four natural numbers, take a square-grid piece of paper of $4 \times 5$ squares. Then cut it as shown in the figure. Hence verify the formula $S_{n}=\frac{n(n+1)}{2}$ (Here $n=4$ )

$$
S_{n}=\frac{n(n+1)}{2} \quad \therefore S_{4}=\frac{4(4+1)}{2}=\frac{4 \times 5}{2}=\frac{20}{2}=10
$$

[Note: Here $a=1$ and $d=1$. The activity can be done taking different values of a and d. Similarly, you can find the sum of even or odd numbers, cubes of natural numbers etc.]
8. W rite $\alpha=6$ on one side of a card sheet and $\alpha=-6$ on its backside. Similarly, write $\beta=-3$ on one side of another card sheet and $\beta=7$ on its backside. From these values, form different values of $(\alpha+\beta)$ and $(\alpha \beta)$; using these values form quadratic equations.

## 1 Linear Equations in Two V ariables

- M ethods of solving linear equations in two variables - graphical method, Cramer's method
- Equations that can be transformed in linear equation in two variables
- A pplication of simultaneous equations

## Let's recall.

## Linear equation in two variables

An equation which contains two variables and the degree of each term containing variable is one, is called a linear equation in two variables.
$a x+b y+c=0$ is the general form of a linear equation in two variables; $a, b, c$ are real numbers and $a, b$ are not equal to zero at the same time.

Ex. $3 x-4 y+12=0$ is the general form of equation $3 x=4 y-12$
Activity : Complete the following table

| No. | Equation | Is the equation a linear equation in 2 <br> variables ? |
| :---: | :---: | :---: |
| 1 | $4 m+3 n=12$ | Y es |
| 2 | $3 x^{2}-7 y=13$ |  |
| 3 | $\sqrt{2} x-\sqrt{5} y=16$ |  |
| 4 | $0 x+6 y-3=0$ |  |
| 5 | $0.3 x+0 y-36=0$ |  |
| 6 | $\frac{4}{x}+\frac{5}{y}=4$ |  |
| 7 | $4 x y-5 y-8=0$ |  |

## Simultaneous linear equations

When we think about two linear equations in two variables at the same time, they are called simultaneous equations.

Last year we learnt to solve simultaneous equations by eliminating one variable. Let us revise it.
Ex. (1) Solve the following simultaneous equations.
(1) $5 x-3 y=8 ; 3 x+y=2$

## Solution :

Method I : $5 x-3 y=8 .$. (I)

$$
3 x+y=2 \ldots \text { (II) }
$$

Multiplying both sides of equation (II) by 3.

$$
\begin{align*}
& 9 x+3 y=6 \ldots \quad \text { (III) } \\
& 5 x-3 y=8 \ldots \quad(I) \tag{I}
\end{align*}
$$

Now let us add equations (I) and (III)
$5 x-3 y=8$
$+9 x+3 y=6$
$14 x=14$
$\therefore x=1$
substituting $x=1$ in equation (II)

$$
3 x+y=2
$$

$\therefore 3 \times 1+y=2$
$\therefore 3+y=2$
$\therefore \quad y=-1$
solution is $x=1, y=-1$; it is also written as ( $\mathrm{x}, \mathrm{y}$ ) = (1, -1 )

M ethod (II)

$$
\begin{array}{ll}
5 x-3 y=8 . & \text { (I) } \\
3 x+y=2 \ldots & \text { (II) }
\end{array}
$$

Let us write value of $y$ in terms of $x$ from equation (II) as

$$
\begin{equation*}
y=2-3 x \tag{III}
\end{equation*}
$$

Substituting this value of y in equation (I).

$$
\begin{aligned}
& 5 x-3 y=8 \\
\therefore & 5 x-3(2-3 x)=8 \\
\therefore & 5 x-6+9 x=8 \\
\therefore & 14 x-6=8 \\
\therefore & 14 x=8+6 \\
\therefore & 14 x=14 \\
\therefore & \quad x=1
\end{aligned}
$$

Substituting $x=1$ in equation (III).
$y=2-3 x$
$\therefore y=2-3 \times 1$
$\therefore y=2-3$
$\therefore y=-1$
$x=1, y=-1$ is the solution.

Ex. (2) Solve: $3 \mathrm{X}+2 \mathrm{y}=29$; $5 \mathrm{X}-\mathrm{y}=18$
Solution: $3 \mathrm{X}+2 \mathrm{y}=29 \ldots$ (I) and $5 \mathrm{X}-\mathrm{y}=18$
Let's solve the equations by eliminating ' $y$ '. Fill suitably the boxes below. Multiplying equation (II) by 2 .
$\therefore 5 \mathrm{X} \times \square-\mathrm{y} \times \square=18 \times \square$
$\therefore 10 \mathrm{x}-2 \mathrm{y}=\square \ldots$ (III)
Let's add equations (I) and (III)

$$
\therefore \mathrm{x}=\square
$$

Substituting $x=5$ in equation (I)

$$
3 x+2 y=29
$$

$\therefore 3 \times \square+2 \mathrm{y}=29$
$\therefore \square+2 y=29$
$\therefore \quad 2 \mathrm{y}=29-\square$
$\therefore \quad 2 \mathrm{y}=\square \quad \therefore \mathrm{y}=$ $\square$
$(\mathrm{x}, \mathrm{y})=(\square, \square)$ is the solution.
Ex. (3) Solve : $15 \mathrm{X}+17 \mathrm{y}=21 ; 17 \mathrm{X}+15 \mathrm{y}=11$
Solution : $15 \mathrm{X}+17 \mathrm{y}=21 \ldots$ (I)

$$
\begin{equation*}
17 x+15 y=11 \tag{II}
\end{equation*}
$$

In the two equations above, the coefficients of x and y are interchanged. While solving such equations we get two simple equations by adding and subtracting the given equations. A fter solving these equations, we can easily find the solution.

Let's add the two given equations.

$$
\begin{aligned}
& 15 x+17 y=21 \\
& +\begin{array}{r}
17 x+15 y=11 \\
\hline 32 x+32 y=32
\end{array}
\end{aligned}
$$

Dividing both sides of the equation by 32 .

$$
x+y=1 \ldots \text { (III) }
$$

Now, let's subtract equation (II) from (I)

| $15 x+17 y=21$ |
| ---: |
| $-17 x \pm 15 y=-11$ |
| $-2 x+2 y=10$ |

dividing the equation by 2 .

$$
-x+y=5 \ldots \text { (IV) }
$$

Now let's add equations (III) and (V).

$$
\begin{aligned}
x+y & =1 \\
+x+y & =5
\end{aligned} \quad \begin{aligned}
& \\
& \hline \therefore 2 y=6
\end{aligned} \quad \therefore \quad y=3
$$

Place this value in equation (III).

$$
x+y=1
$$

$\therefore x+3=1$
$\therefore \mathrm{X}=1-3$
$\therefore \mathrm{X}=-2$
$(\mathrm{x}, \mathrm{y})=(-2,3)$ is the solution.

## Practice Set 1.1

(1) Complete the following activity to solve the simultaneous equations.

$$
\begin{equation*}
5 x+3 y=9 \tag{I}
\end{equation*}
$$

$$
\begin{equation*}
2 x-3 y=12 \tag{II}
\end{equation*}
$$

Let's add eqations (I) and (II).
$5 x+3 y=9$

| $+{ }_{2 x}-3 y$ | $=12$ |
| ---: | :--- |
| $\square x$ | $=\square$ |

$x=\frac{\square}{\square} \quad x=\square$

Place $X=3$ in equation (I).
$5 \times \square+3 y=9$
$3 y=9-$ $\square$
$3 y=\square$
$y=\frac{\square}{3}$
$y=\square$
$\therefore$ Solution is $(\mathrm{x}, \mathrm{y})=(\square, \square)$.
2. Solve the following simultaneous equations.
(1) $3 a+5 b=26 ; a+5 b=22$
(2) $x+7 y=10 ; 3 x-2 y=7$
(3) $2 x-3 y=9 ; 2 x+y=13$
(4) $5 \mathrm{~m}-3 \mathrm{n}=19 ; \mathrm{m}-6 \mathrm{n}=-7$
(5) $5 x+2 y=-3 ; x+5 y=4$
(6) $\frac{1}{3} x+y=\frac{10}{3} ; 2 x+\frac{1}{4} y=\frac{11}{4}$
(7) $99 x+101 y=499 ; 101 x+99 y=501$
(8) $49 \mathrm{x}-57 \mathrm{y}=172 ; 57 \mathrm{x}-49 \mathrm{y}=252$

## Let's recall.

Graph of a linear equation in two variables
In the $9^{\text {th }}$ standard we learnt that the graph of a linear equation in two variables is a straight line. The ordered pair which satisfies the equation is a solution of that equation. The ordered pair represents a point on that line.
Ex. Draw graph of $2 \mathrm{x}-\mathrm{y}=4$.
Solution : To draw a graph of the equation let's write 4 ordered pairs.

| X | 0 | 2 | 3 | -1 |
| :---: | :---: | :---: | :---: | :---: |
| y | -4 | 0 | 2 | -6 |
| $(\mathrm{x}, \mathrm{y})$ | $(0,-4)$ | $(2,0)$ | $(3,2)$ | $(-1,-6)$ |

To obtain ordered pair by simple way let's take $\mathrm{X}=0$ and then $\mathrm{y}=0$.

Steps to follow for drawing a graph of linear equation in two variables.

Find at least 4 ordered pairs for given equation

Draw $X$ - axis, $Y$-axis on graph paper and plot the points

See that all 4 points lie on one line

Two points are sufficient to represent a line, but if co-ordinates of one of the two points are wrong then you will not get a correct line.
If you plot three points and if they are non collinear then it is understood that one of the points is wrongly plotted. But it is not easy to identify the incorrect point.
If we plot four points, it is almost certain that three of them will be collinear.

A linear equation $y=2$ is also written as $0 x+y=2$. The graph of this line is parallel to X -axis; as for any value of $\mathrm{x}, \mathrm{y}$ is always 2 .

| X | 1 | 4 | -3 |
| :---: | :---: | :---: | :---: |
| y | 2 | 2 | 2 |
| $(\mathrm{x}, \mathrm{y})$ | $(1,2)$ | $(4,2)$ | $(-3,2)$ |

Similarly equation $\mathrm{X}=2$ is written as $\mathrm{X}+0 \mathrm{y}=2$ and its graph is parallel to $Y$-axis.

## Let's learn.

## Graphical method

Ex. Let's draw graphs of $x+y=4,2 x-y=2$ and observe them.

| $x+y=4$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | -1 | 4 | 1 | 6 |
| $y$ | 5 | 0 | 3 | -2 |
| $(x, y)$ | $(-1,5)$ | $(4,0)$ | $(1,3)$ | $(6,-2)$ |

| $x$ | 0 | 1 | 3 | -1 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | -2 | 0 | 4 | -4 |
| $(x, y)$ | $(0,-2)$ | $(1,0)$ | $(3,4)$ | $(-1,-4)$ |

Each point on the graph satisfies the equation. The two lines intersect each other at $(2,2)$.
Hence ordered pair $(2,2)$ i.e. $x=2, y=2$ satisfies the equations $x+y=4$ and $2 \mathrm{x}-\mathrm{y}=2$.
The values of variables that satisfy the given equations, give the solution of given equations.
$\therefore$ the solution of given equations $x+y=4$, $2 \mathrm{X}-\mathrm{y}=2$ is $\mathrm{x}=2$, $y=2$.

Let's solve these equations by method of elimination.
$x+y=4$
$2 x-y=2$

Adding equations (I) and (II) we get,

$$
3 x=6 \therefore x=2
$$

$$
\begin{align*}
& \quad x+y=4  \tag{II}\\
& \therefore \quad 2+y=4 \\
& \therefore \quad y=2
\end{align*}
$$

Activity (I): Solve the following simultaneous equations by graphical method. - Complete the following tables to get ordered pairs.

| $x$ | 0 |  | 3 |  |
| :---: | :---: | :---: | :---: | :---: |
| $y$ |  | 0 |  | -3 |
| $(x, y)$ |  |  |  |  |

| $x \mathrm{X}-3 \mathrm{y}=1$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| X | 2 |  |  | -4 |
| y |  | 8 | -2 |  |
| $(\mathrm{x}, \mathrm{y})$ |  |  |  |  |

- Plot the above ordered pairs on the same co-ordinate plane.
- Draw graphs of the equations. - Note the co-ordinates of the point of intersection of the two graphs. Write solution of these equations.
Activity II: Solve the above equations by method of elimination. Check your solution with the solution obtained by graphical method.

## Let's think.

The following table contains the values of $x$ and $y$ co-ordinates for ordered pairs to draw the graph of $5 \mathrm{X}-3 \mathrm{y}=1$

| X | 0 | $\frac{1}{5}$ | 1 | -2 |
| :---: | :---: | :---: | :---: | :---: |
| y | $-\frac{1}{3}$ | 0 | $\frac{4}{3}$ | $-\frac{11}{3}$ |
| $(\mathrm{x}, \mathrm{y})$ | $\left(0,-\frac{1}{3}\right)$ | $\left(\frac{1}{5}, 0\right)$ | $\left(1, \frac{4}{3}\right)$ | $\left(-2,-\frac{11}{3}\right)$ |

- Is it easy to plot these points ? - Which precaution is to be taken to find ordered pairs so that plotting of points becomes easy ?

## Practice Set 1.2

1. Complete the following table to draw graph of the equations -
(I) $x+y=3$
(II) $x-y=4$

| x | 3 | $\square$ | $\square$ |
| :---: | :---: | :---: | :---: |
| y | $\square$ | 5 | 3 |
| $(\mathrm{x}, \mathrm{y})$ | $(3,0)$ | $\square$ | $(0,3)$ |

| $\mathrm{x}-\mathrm{y}=4$ |  |  |  |
| :---: | :---: | :---: | :---: |
| x | $\square$ | -1 | 0 |
| y | 0 | $\square$ | -4 |
| $(\mathrm{x}, \mathrm{y})$ | $\square$ | $\square$ | $(0,-4)$ |

2. Solve the following simultaneous equations graphically.
(1) $x+y=6 ; x-y=4$
(2) $x+y=5 ; x-y=3$
(3) $x+y=0 ; 2 x-y=9$
(4) $3 \mathrm{X}-\mathrm{y}=2 ; 2 \mathrm{x}-\mathrm{y}=3$
(5) $3 \mathrm{X}-4 \mathrm{y}=-7$; $5 \mathrm{X}-2 \mathrm{y}=0$
$(6)^{\star} 2 x-3 y=4 ; 3 y-x=4$

## Let's discuss.

To solve simultaneous equations $\mathrm{X}+2 \mathrm{y}=4 ; 3 \mathrm{X}+6 \mathrm{y}=12$ graphically, following are the ordered pairs.
$\mathrm{X}+2 \mathrm{y}=4$

| x | -2 | 0 | 2 |
| :---: | :---: | :---: | :---: |
| y | 3 | 2 | 1 |
| $(\mathrm{x}, \mathrm{y})$ | $(-2,3)$ | $(0,2)$ | $(2,1)$ |
| x | -4 | 1 | 8 |
| y | 4 | 1.5 | -2 |
| $(\mathrm{x}, \mathrm{y})$ | $(-4,4)$ | $(1,1.5)$ | $(8,-2)$ |

Plotting the above ordered pairs, graph is drawn. Observe it and find answers of the following questions.

(1) Are the graphs of both the equations different or same ?
(2) What are the solutions of the two equations $X+2 y=4$ and $3 X+6 y=12$ ? How many solutions are possible?
(3) What are the relations between coefficients of $x$, coefficients of $y$ and constant terms in both the equations ?
(4) What conclusion can you draw when two equations are given but the graph is only one line?

Now let us consider another example.
Draw graphs of $x-2 y=4,2 x-4 y=12$ on the same co-ordinate plane. Observe it. Think of the realation between the coefficients of $x$, coefficients of y and the constant terms and draw the inference.

## ICT Tools or Links.

Use Geogebra software, draw X- axis, Y-axis. Draw graphs of simultaneous equations.

## Let's learn.

## Determinant

$\left|\begin{array}{ll}\mathrm{a} & \mathrm{b} \\ \mathrm{c} & \mathrm{d}\end{array}\right|$ is a determinant. $(\mathrm{a}, \mathrm{b}),(\mathrm{c}, \mathrm{d})$ are rows and $\binom{a}{c},\binom{b}{d}$ are columns.

Degree of this determinant is 2 , because there are 2 elements in each column and 2 elements in each row. Determinant represents a number which is (ad-bc).
i.e. $\left|\begin{array}{ll}a^{X} & b \\ c & d\end{array}\right|=a d-b c$
$a d-b c$ is the value of determinant $\left|\begin{array}{ll}a & b \\ c & d\end{array}\right|$

Determinants, usually, are represented with capital letters as A, B, C, D, . . . . etc.

## s 8 S Solved Examples SS\&\&

Ex. Find the values of the following determinants.
(1) $A=\left|\begin{array}{ll}5 & 3 \\ 7 & 9\end{array}\right|$
(2) $N=\left|\begin{array}{rr}-8 & -3 \\ 2 & 4\end{array}\right|$
(3) $B=\left|\begin{array}{cc}2 \sqrt{3} & 9 \\ 2 & 3 \sqrt{3}\end{array}\right|$

## Solution :

(1) $A=\left|\begin{array}{ll}5 & 3 \\ 7 & 9\end{array}\right|=(5 \times 9)-(3 \times 7)=45-21=24$
(2) $\left.N=\left|\begin{array}{rr}-8 & -3 \\ 2 & 4\end{array}\right|=[(-8) \times(4)]-[(-3) \times 2)\right]=-32-(-6)$

$$
=-32+6=-26
$$

(3) $\left.\left.B=\left|\begin{array}{cc}2 \sqrt{3} & 9 \\ 2 & 3 \sqrt{3}\end{array}\right|=[2 \sqrt{3} \times 3 \sqrt{3})\right]-[2 \times 9)\right]=18-18=0$

## Let's learn.

## Determinant method (Cramer's Rule)

Using determinants, simultaneous equaions can be solved easily and in less space. This method is known as determinant method. This method was first given by a Swiss mathematician Gabriel Cramer, so it is also known as Cramer's method.

To use Cramer's method, the equations are written as $a_{1} x+b_{1} y=c_{1}$ and $a_{2} x+b_{2} y=c_{2}$.

$$
\begin{align*}
& a_{1} x+b_{1} y=c_{1} \cdots  \tag{I}\\
& a_{2} x+b_{2} y=c_{2} \cdots \tag{II}
\end{align*}
$$

Here $x$ and $y$ are variables, $a_{1}, b_{1}, c_{1}$ and $a_{2}, b_{2}, c_{2}$ are real numbers, $a_{1} b_{2}-a_{2} b_{1} \neq 0$

Now let us solve these equations.
Multiplying equation (I) by $b_{2}$.
$a_{1} b_{2} x+b_{1} b_{2} y=c_{1} b_{2} \ldots$
Multiplying equation (II) by $\mathrm{b}_{1}$.
$a_{2} b_{1} x+b_{2} b_{1} y=c_{2} b_{1}$

Subtracting equation (IV) from (III)
$a_{1} b_{2} x+b_{1} b_{2} y=c_{1} b_{2}$
$-a_{2} b_{1} x b_{2} b_{1} y=c_{2} b_{1}$
$\left(a_{1} b_{2}-a_{2} b_{1}\right) x=c_{1} b_{2}-c_{2} b_{1}$
$x=\frac{c_{1} b_{2}-c_{2} b_{1}}{a_{1} b_{2}-a_{2} b_{1}} \cdots$
Similarly $y=\frac{a_{1} c_{2}-a_{2} c_{1}}{a_{1} b_{2}-a_{2} b_{1}} \cdots$
To remember and write the expressions
$c_{1} b_{2}-c_{2} b, \quad a_{1} b_{2}-a_{2} b_{1}, \quad a_{1} C_{2}-a_{2} C_{1}$ we use the determinants.
Now $a_{1} x+b_{1} y=c_{1} \quad$ We can write 3 columns. $\binom{a_{1}}{a_{2}},\binom{b_{1}}{b_{2}},\binom{c_{1}}{c_{2}}$
and $a_{2} x+b_{2} y=c_{2}$
The values $\mathrm{x}, \mathrm{y}$ in equation (V), (VI) are written using determinants as follows

$$
\begin{aligned}
& x=\frac{c_{1} b_{2}-c_{2} b_{1}}{a_{1} b_{2}-a_{2} b_{1}}=\frac{\left|\begin{array}{ll}
c_{1} & b_{1} \\
c_{2} & b_{2}
\end{array}\right|}{\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right|} \\
& y=\frac{a_{1} c_{2}-a_{2} c_{1}}{a_{1} b_{2}-a_{2} b_{1}}=\frac{\left|\begin{array}{ll}
a_{1} & c_{1} \\
a_{2} & c_{2}
\end{array}\right|}{\left|\begin{array}{ll}
a_{1} & b_{1} \\
a_{2} & b_{2}
\end{array}\right|}
\end{aligned}
$$

To remember let us denote $D=\left|\begin{array}{ll}a_{1} & b_{1} \\ a_{2} & b_{2}\end{array}\right|, \quad D_{x}=\left|\begin{array}{ll}c_{1} & b_{1} \\ c_{2} & b_{2}\end{array}\right|, \quad D_{y}=\left|\begin{array}{ll}a_{1} & c_{1} \\ a_{2} & c_{2}\end{array}\right|$
$\therefore \mathrm{x}=\frac{\mathrm{D}_{\mathrm{x}}}{\mathrm{D}}, \mathrm{y}=\frac{\mathrm{D} \mathbf{y}}{\mathrm{D}}$
For writting D, DX, DY remember the order of columns $\binom{a_{1}}{a_{2}},\binom{b_{1}}{b_{2}},\binom{c_{1}}{c_{2}}$. From the equations,
$a_{1} x+b_{1} y=c_{1}$
and $a_{2} x+b_{2} y=c_{2}$ we get the columns $\binom{a_{1}}{a_{2}},\binom{b_{1}}{b_{2}},\binom{c_{1}}{c_{2}}$.

- In D the column of constants $\binom{c_{1}}{c_{2}}$ is omitted.
- In $D_{X}$ the column of the coefficients of $x,\binom{a_{1}}{a_{2}}$ is replaced by $\binom{c_{1}}{c_{2}}$.
- In $D_{y}$ the column of the coefficients of $y,\binom{b_{1}}{b_{2}}$ is replaced by $\binom{c_{1}}{c_{2}}$.

## Let's remember!

Cramer's method to solve simultaneous equations.

## Gabriel Cramer

(31 July, 1704 to 4 J anuary, 1752)
This Swiss mathematician was born in Geneva. He was very well versed in mathematics, since childhood. At the age of eighteen, he got a doctorate. He was a professor in Geneva.

## SSBS Solved Exampless. $\mathscr{S}$

Ex. (1) Solve the following simultaneous equations using Cramer's Rule.

$$
5 x+3 y=-11 ; 2 x+4 y=-10
$$

Solution : Given equations

$$
\begin{aligned}
& 5 \mathrm{X}+3 \mathrm{y}=-11 \\
& 2 \mathrm{X}+4 \mathrm{y}=-10 \\
& \mathrm{D}=\left|\begin{array}{ll}
5 & 3 \\
2 & 4
\end{array}\right|=(5 \times 4)-(2 \times 3)=20-6=14 \\
& \mathrm{D}_{\mathrm{X}}=\left|\begin{array}{ll}
-11 & 3 \\
-10 & 4
\end{array}\right|=(-11) \times 4-(-10) \times 3=-44-(-30) \\
& =-44+30=-14
\end{aligned} \begin{array}{r}
\mathrm{Dy}=\left|\begin{array}{rr}
5 & -11 \\
2 & -10
\end{array}\right|=5 \times(-10)-2 \times(-11)=-50-(-22) \\
\mathrm{X}=\frac{\mathrm{D} X}{\mathrm{D}}=\frac{-14}{14}=-1 \quad \text { and } \mathrm{y}=\frac{\mathrm{D} y}{\mathrm{D}}=\frac{-28}{14}=-2
\end{array}
$$

$\therefore(\mathrm{x}, \mathrm{y})=(-1,-2)$ is the solution.
Activity 1: To solve the simultaneous equations by determinant method, fill in the blanks

$$
y+2 x-19=0 ; 2 x-3 y+3=0
$$

Solution : Write the given equations in the form $a x+b y=c$

$$
\begin{aligned}
& 2 \mathrm{X}+\mathrm{y}=19 \\
& 2 x-3 y=-3 \\
& \mathrm{D}=\left|\begin{array}{ll}
\square & \square \\
2 & -3
\end{array}\right|=[\square \times(-3)]-[2 \times(\square)]=\square-(\square) \\
& =\square-\square=\square \\
& \mathrm{D}_{\mathrm{X}}=\left|\begin{array}{c}
19 \quad \square \\
\square-3
\end{array}\right|=[19 \times(\square)]-[(\square) \times(\square)]=\square-\square \\
& =\square
\end{aligned}
$$

$$
\begin{aligned}
\text { Dy }=\left|\begin{array}{ll}
\mid \square & 19 \\
2 & \square
\end{array}\right| & =[(\square) \times(\square)]-[(\square) \times(\square)] \\
& =\square-\square=\square
\end{aligned}
$$

By Cramer's Rule -

$$
\begin{array}{rl|l}
x & =\frac{D_{x}}{D} & y=\frac{D y}{D} \\
\therefore x & =\frac{\square}{\square}=\square & y=\frac{\square}{\square}=\square
\end{array}
$$

$$
\therefore(\mathrm{x}, \mathrm{y})=(\square,
$$

$\square$ ) is the solution of the given equations.

Activity 2: Complete the following activity -

## Let's think.

- What is the nature of solution if $D=0$ ?
- What can you say about lines if common solution is not possible?

## Practice Set 1.3

1. Fill in the blanks with correct number
$\left|\begin{array}{ll}3 & 2 \\ 4 & 5\end{array}\right|=3 \times$ $\square$ $-\square \times 4$
$=\square-8=$ $\square$
2. Find the values of following determinants.
(1) $\left|\begin{array}{ll}-1 & 7 \\ 2 & 4\end{array}\right|$
(2) $\left|\begin{array}{ll}5 & 3 \\ -7 & 0\end{array}\right|$
(3)
$\left|\begin{array}{cc}\frac{7}{3} & \frac{5}{3} \\ \frac{3}{2} & \frac{1}{2}\end{array}\right|$
3. Solve the following simultaneous equations using Cramer's rule.
(1) $3 x-4 y=10 ; 4 x+3 y=5$
(2) $4 \mathrm{X}+3 \mathrm{y}-4=0 ; 6 \mathrm{X}=8-5 \mathrm{y}$
(3) $x+2 y=-1 ; 2 x-3 y=12$
(4) $6 x-4 y=-12 ; 8 x-3 y=-2$
(5) $4 \mathrm{~m}+6 \mathrm{n}=54 ; 3 \mathrm{~m}+2 \mathrm{n}=28$
(6) $2 x+3 y=2 ; x-\frac{y}{2}=\frac{1}{2}$

## Let's learn.

Equations reducible to a pair of linear equations in two variables
Activity : Complete the following table.

| Equation | No. of variables | whether linear or not |
| :---: | :---: | :---: |
| $\frac{3}{x}-\frac{4}{\mathrm{y}}=8$ | 2 | Not linear |
| $\frac{6}{\mathrm{x}-1}+\frac{3}{\mathrm{y}-2}=0$ | $\square$ | $\square$ |
| $\frac{7}{2 \mathrm{x}+1}+\frac{13}{\mathrm{y}+2}=0$ | $\square$ | $\square$ |
| $\frac{14}{x+y}+\frac{3}{x-y}=5$ | $\square$ | $\square$ |

## Let's think.

In the above table the equations are not linear. Can you convert the equations into linear equations ?

## Let's remember!

We can create new variables making a proper change in the given variables. Substituting the new variables in the given non-linear equations, we can convert them in linear equations.

Also remember that the denominator of any fraction of the form $\frac{m}{n}$ cannot be zero.
©\&\& Solved examples $\mathscr{S} \mathscr{S}$
Solve:
Ex. (1) $\frac{4}{x}+\frac{5}{y}=7 ; \frac{3}{x}+\frac{4}{y}=5$
Solution: $\frac{4}{x}+\frac{5}{y}=7 ; \frac{3}{x}+\frac{4}{y}=5$

$$
\begin{align*}
& 4\left(\frac{1}{x}\right)+5\left(\frac{1}{y}\right)=7 \ldots  \tag{I}\\
& 3\left(\frac{1}{x}\right)+4\left(\frac{1}{y}\right)=5 \ldots \tag{II}
\end{align*}
$$

Replacing $\left(\frac{1}{x}\right)$ by $m$ and $\left(\frac{1}{y}\right)$ by $n$ in equations (I) and (II), we get $4 m+5 n=7 \ldots$ (III)
$3 m+4 n=5 \ldots$ (IV)
On solving these equations we get
$m=3, n=-1$
Now, $m=\frac{1}{x} \quad \therefore 3=\frac{1}{x} \quad \therefore x=\frac{1}{3}$

$$
n=\frac{1}{y} \quad \therefore-1=\frac{1}{y} \quad \therefore y=-1
$$

$\therefore$ Solution of given simultaneous equations is $(x, y)=\left(\frac{1}{3},-1\right)$

Ex.(2) $\frac{4}{x-y}+\frac{1}{x+y}=3 ; \frac{2}{x-y}-\frac{3}{x+y}=5$
Solution : $\frac{4}{x-y}+\frac{1}{x+y}=3 ; \frac{2}{x-y}-\frac{3}{x+y}=5$

$$
\begin{equation*}
4\left(\frac{1}{x-y}\right)+1\left(\frac{1}{x+y}\right)=3 \ldots \tag{I}
\end{equation*}
$$

$2\left(\frac{1}{x-y}\right)-3\left(\frac{1}{x+y}\right)=5 \ldots$
Replacing $\left(\frac{1}{x-y}\right)$ by a and $\left(\frac{1}{x+y}\right)$ by $b$ we get

$$
\begin{aligned}
& 4 a+b=3 \ldots(I I I) \\
& 2 a-3 b=5 \ldots(\text { IV })
\end{aligned}
$$

On solving these equations we get, $a=1 \mathrm{~b}=-1$
But $\mathrm{a}=\left(\frac{1}{x-y}\right) \quad, \mathrm{b}=\left(\frac{1}{x+y}\right)$

$$
\begin{aligned}
\therefore\left(\frac{1}{x-y}\right) & =1,\left(\frac{1}{x+y}\right)=-1 \\
\therefore \quad \mathrm{x}-\mathrm{y} & =1 \ldots(\mathrm{~V}) \\
\mathrm{x}+\mathrm{y} & =-1 \ldots(\mathrm{VI})
\end{aligned}
$$

Solving equation (V) and (VI) we get $x=0, y=-1$
$\therefore$ Solution of the given equations is $(x, y)=(0,-1)$

## Let's think.

In the above examples the simultaneous equations obtained by transformation are solved by elimination method.

If you solve these equations by graphical method and by Cramer's rule will you get the same answers ? Solve and check it.

Activity : To solve given equations fill the boxes below suitably.

Replacing $m, n$ by their original values.

$\therefore(x, y)=($,$) is the solution of the given simultaneous equations.$

## Practice Set 1.4

1. Solve the following simultaneous equations.
(1) $\frac{2}{x}-\frac{3}{y}=15 ; \frac{8}{x}+\frac{5}{y}=77$
(2) $\frac{10}{x+y}+\frac{2}{x-y}=4 ; ~ \frac{15}{x+y}-\frac{5}{x-y}=-2$
(3) $\frac{27}{x-2}+\frac{31}{y+3}=85 ; ~ \frac{31}{x-2}+\frac{27}{y+3}=89$
(4) $\frac{1}{3 x+y}+\frac{1}{3 x-y}=\frac{3}{4} ; \frac{1}{2(3 x+y)}-\frac{1}{2(3 x-y)}=-\frac{1}{8}$

## Let's learn.

## Application of Simultaneous equations

Activity : There are some instructions given below. Frame the equations from the information and write them in the blank boxes shown by arrows.
 that time.

Ex. (1) The perimeter of a rectangle is 40 cm . The length of the rectangle is more than double its breadth by 2 . Find length and breadth.

Solution : Let length of rectangle be xcm and breadth be ycm .
From first condition -

$$
\begin{align*}
2(x+y) & =40 \\
x+y & =20 \ldots \tag{I}
\end{align*}
$$

From $2^{\text {nd }}$ condition -

$$
\begin{gather*}
x=2 y+2 \\
\therefore x-2 y=2 \ldots \tag{II}
\end{gather*}
$$

Let's solve eq. (I), (II) by determinant method

$$
\begin{aligned}
& x+y=20 \\
& x-2 y=2
\end{aligned}
$$

$D=\left|\begin{array}{rr}1 & 1 \\ 1 & -2\end{array}\right|=[1 \times(-2)]-(1 \times 1)=-2-1=-3$
$D_{X}=\left|\begin{array}{lr}20 & 1 \\ 2 & -2\end{array}\right|=[20 \times(-2)]-(1 \times 2)=-40-2=-42$
$D_{y}=\left|\begin{array}{rr}1 & 20 \\ 1 & 2\end{array}\right|=(1 \times 2)-(20 \times 1)=2-20=-18$
$x=\frac{D_{x}}{D}$ and $y=\frac{D_{y}}{D}$
$\therefore x=\frac{-42}{-3}$ and $y=\frac{-18}{-3}$
$\therefore x=14, y=6$
$\therefore$ Length of the rectangle is 14 cm and breadth is 6 cm .

## Ex. (2)

Find selling price of wrist watch of each type.

Solution : Let selling price of each analogue watch be ₹ x Selling price of each digital watch be ₹ y From first condition -

$$
11 x+6 y=4330 \ldots \text { (I) }
$$

from $2^{\text {nd }}$ condition -

$$
\begin{equation*}
22 x+5 y=7330 \ldots \tag{II}
\end{equation*}
$$

multiplying equation (I) by 2 we get,

$$
22 x+12 y=8660 \ldots \text { (III) }
$$

subtract equation (III) from equation (II).

$$
\begin{gathered}
\begin{array}{c}
22 x+5 y=7330 \ldots \\
-\ldots 2 x+12 y=-8660 \ldots
\end{array} \\
\hline-7 y=-1330
\end{gathered}
$$

$$
\therefore \quad y=190
$$

Substitute this value of y in equation (I)

$$
\begin{aligned}
11 x+6 y & =4330 \\
\therefore \quad 11 x+6(190) & =4330 \\
\therefore \quad 11 x+1140 & =4330 \\
\therefore \quad 11 x & =3190 \\
\therefore \quad x & =290
\end{aligned}
$$

$\therefore$ selling price of each analogue watch is ₹ 290 and of each digital watch is ₹ 190 .

Ex. (3)

A boat travels 16 km upstream and 24 km downstream in 6 hours.

The same boat travels 36 km upstream and 48 km downstream in 13 hours.

Find the speed of water current and speed of boat in still water.
Solution : Let the speed of the boat in still water be $\mathrm{x} \mathrm{km} / \mathrm{hr}$ and the speed of water current be y km/hr
$\therefore$ speed of boat in downstream $=(x+y) k m / h r$.
and that in upstream $=(x-y) k m / h r$.
Now distance $=$ speed $\times$ time $\quad \therefore$ time $=\frac{\text { distance }}{\text { speed }}$
Time taken by the boat to travel 16 km upstream $=\frac{16}{x-y}$ hours and it takes $\frac{24}{x+y}$ hours to travel 24 km downstream.
from first condition -

$$
\begin{equation*}
\frac{16}{x-y}+\frac{24}{x+y}=6 \ldots \tag{I}
\end{equation*}
$$

from $2^{\text {nd }}$ condition
$\frac{36}{x-y}+\frac{48}{x+y}=13 \ldots$
By replacing $\frac{1}{x-y}$ by $m$ and $\frac{1}{x+y}$ by $n$ we get
$16 \mathrm{~m}+24 \mathrm{n}=6 \ldots$ (III)
$36 m+48 n=13 . .(I V)$

Solving equations (III) and (IV) $\mathrm{m}=\frac{1}{4}, \mathrm{n}=\frac{1}{12}$
Repalcing $m, n$ by their original values we get
$x-y=4 \ldots$ (V) $x+y=12 \ldots(V I)$
Solving equations (V), (VI) we get $x=8, y=4$
$\therefore$ speed of the boat in still water is $8 \mathrm{~km} / \mathrm{hr}$. and speed of water current is $4 \mathrm{~km} / \mathrm{hr}$.

Ex. (4) A certain amount is equally distributed among certain number of students. Each would get ₹ 2 less if 10 students were more and each would get ₹ 6 more if 15 students were less. Find the number of students and the amount distributed.
Solution : Let the number of students be x and amount given to each student be ₹ $y$.
$\therefore$ Total amount distributed is $x y$
From the first condition we get,
$(x+10)(y-2)=x y$
$\therefore x y-2 x+10 y-20=x y$
$\therefore-2 x+10 y=20$
$\therefore-\mathrm{X}+5 \mathrm{y}=10 \ldots$
From the $2^{\text {nd }}$ condition we get,
$(x-15)(y+6)=x y$
$\therefore x y+6 x-15 y-90=x y$
$\therefore 6 x-15 y=90$
$\therefore 2 x-5 y=30 \ldots$ (II)
Adding equations (I) and (II)
$+\begin{array}{r}-x+5 y=10 \\ 2 x-5 y=30\end{array}$

$$
x=40
$$

Substitute this value of $x$ in equation (I)
$-x+5 y=10$
$\therefore-40+5 y=10$
$\therefore \quad 5 y=50$

$$
\therefore \quad y=10
$$

Total amount distributed is $=x y=40 \times 10=₹ 400$.
$\therefore$ ₹ 400 distributed equally among 40 students.
Ex. (5) A three digit number is equal to 17 times the sum of its digits; If the digits are reversed, the new number is 198 more than the old number ; also the sum of extreme digits is less than the middle digit by unity. Find the original number.
Solution : Let the digit in hundreds place be x and that in unit place be y .

| $H$ | $T$ | unit |
| :---: | :---: | :---: |
| $x$ | $x+y+1$ | $y$ |

$\therefore$ the three digit number is $100 \mathrm{x}+10(\mathrm{x}+\mathrm{y}+1)+\mathrm{y}$

$$
=100 x+10 x+10 y+10+y=110 x+11 y+10
$$

the sum of the digits in the given number $=x+(x+y+1)+y=2 x+2 y+1$
$\therefore$ From first condition
Given number $=17 \times$ (sum of the digits)
$\therefore 110 x+11 y+10=17 \times(2 x+2 y+1)$
$\therefore 110 x+11 y+10=34 x+34 y+17$
$\therefore 76 x-23 y=7$
The number obtained by reversing the digits
$=100 y+10(x+y+1)+x=110 y+11 x+10$
Given number $=110 x+11 y+10$
From $2^{\text {nd }}$ condition, Given number $+198=$ new number.
$110 x+11 y+10+198=110 y+11 x+10$
99x $-99 y=-198$

$$
\begin{gather*}
x-y=-2 \\
\therefore x=y-2 \ldots \tag{II}
\end{gather*}
$$

Substitute this value of $x$ in equation (I).
$\therefore 76(y-2)-23 y=7$
$\therefore 76 y-152-23 y=7$

$$
53 y=159
$$

$\therefore \quad \mathrm{y}=3 \quad \therefore$ the digit in units place is $=3$
Substitute this value in equation (II)

$$
x=y-2
$$

$\therefore x=3-2=1$
$\therefore \quad \mathrm{x}=1 \quad \therefore$ The digit in hundred's place is 1
the digit in ten's place is $3+1+1=5$
$\therefore$ the number is 153 .

## PracticeSet 1.5

(1) Two numbers differ by 3 . The sum of twice the smaller number and thrice the greater number is 19 . Find the numbers.
(2) Complete the following.

(3) The sum of father's age and twice the age of his son is 70 . If we double the age of the father and add it to the age of his son the sum is 95 . Find their present ages.
(4) The denominator of a fraction is 4 more than twice its numerator. Denominator becomes 12 times the numerator, if both the numerator and the denominator are reduced by 6 . Find the fraction.
(5) Two types of boxes A, B are to be placed in a truck having capacity of 10 tons. When 150 boxes of type $A$ and 100 boxes of type $B$ are loaded in the truck, it weighes 10 tons. But when 260 boxes of type A are loaded in the truck, it can still accommodate 40 boxes of type B, so that it is fully loaded. Find the weight of each type of box.
(6) Out of 1900 km , Vishal travelled some distance by bus and some by aeroplane. Bus travels with average speed $60 \mathrm{~km} / \mathrm{hr}$ and the average speed of aeroplane is $700 \mathrm{~km} / \mathrm{hr}$. It takes 5 hours to complete the journey. Find the distance, Vishal travelled by bus.

## Problem Set - 1

1. Choose correct alternative for each of the following questions
(1) To draw graph of $4 x+5 y=19$, Find $y$ when $x=1$.
(A) 4
(B) 3
(C) 2
(D) -3
(2) For simultaneous equations in variables $x$ and $y, D_{x}=49, D_{y}=-63$, $D=7$ then what is $x$ ?
(A) 7
(B) -7
(C) $\frac{1}{7}$
(D) $\frac{-1}{7}$
(3) Find the value of $\left|\begin{array}{cc}5 & 3 \\ -7 & -4\end{array}\right|$
(A) -1
(B) -41
(C) 41
(D) 1
(4) To solve $x+y=3 ; 3 x-2 y-4=0$ by determinant method find D.
(A) 5
(B) 1
(C) -5
(D) -1
(5) $a x+b y=c$ and $m x+n y=d$ andan $\neq b m$ then these simultaneous equations have -
(A) Only one common solution.
(B) No solution.
(C) Infinite number of solutions.
(D) Only two solutions.
2. Complete the following table to draw the graph of $2 x-6 y=3$

| $x$ | -5 | $\square$ |
| :---: | :---: | :---: |
| $y$ | $\square$ | 0 |
| $(x, y)$ | $\square$ | $\square$ |

3. Solve the following simultaneous equations graphically.
(1) $2 x+3 y=12 ; x-y=1$
(2) $x-3 y=1 ; 3 x-2 y+4=0$
(3) $5 x-6 y+30=0 ; 5 x+4 y-20=0$
(4) $3 x-y-2=0 ; 2 x+y=8$
(5) $3 x+y=10 ; x-y=2$
4. Find the values of each of the following determinants.
(1) $\left|\begin{array}{ll}4 & 3 \\ 2 & 7\end{array}\right|$
(2) $\left|\begin{array}{lr}5 & -2 \\ -3 & 1\end{array}\right|$
(3) $\left|\begin{array}{rr}3 & -1 \\ 1 & 4\end{array}\right|$
5. Solve the following equations by Cramer's method.
(1) $6 x-3 y=-10 ; 3 x+5 y-8=0$
(2) $4 m-2 n=-4 ; 4 m+3 n=16$
(3) $3 x-2 y=\frac{5}{2} ; \frac{1}{3} x+3 y=-\frac{4}{3}$
(4) $7 \mathrm{x}+3 \mathrm{y}=15 ; 12 \mathrm{y}-5 \mathrm{x}=39$
(5) $\frac{x+y-8}{2}=\frac{x+2 y-14}{3}=\frac{3 x-y}{4}$
6. Solve the following simultaneous equations.
$\begin{array}{ll}\text { (1) } \frac{2}{x}+\frac{2}{3 y}=\frac{1}{6} \quad ; \quad \frac{3}{x}+\frac{2}{y}=0 & \text { (2) } \frac{7}{2 x+1}+\frac{13}{y+2}=27 ; \frac{13}{2 x+1}+\frac{7}{y+2}=33\end{array}$
(3) $\frac{148}{x}+\frac{231}{y}=\frac{527}{x y} \quad ; \quad \frac{231}{x}+\frac{148}{y}=\frac{610}{x y} \quad$ (4) $\frac{7 x-2 y}{x y}=5 \quad ; \quad \frac{8 x+7 y}{x y}=15$
(5) $\frac{1}{2(3 x+4 y)}+\frac{1}{5(2 x-3 y)}=\frac{1}{4} \quad ; \quad \frac{5}{(3 x+4 y)}-\frac{2}{(2 x-3 y)}=-\frac{3}{2}$
7. Solve the following word problems.
(1) A two digit number and the number with digits interchanged add up to 143. In the given number the digit in unit's place is 3 more than the digit in the ten's place. Find the original number.
Let the digit in unit's place is x
and that in the ten's place is $y$
$\therefore$ the number $=\square \mathrm{y}+\mathrm{x}$
The number obtained by interchanging the digits is $\square \mathrm{x}+\mathrm{y}$
According to first condition two digit number + the number obtained by interchanging the digits $=143$

$$
\begin{align*}
\therefore \quad & 10 \mathrm{y}+\mathrm{x}+\square=143 \\
& \therefore \quad \square \mathrm{x}+\square \mathrm{y}=143 \\
& \mathrm{x}+\mathrm{y}=\square \ldots(\mathrm{l}) \tag{I}
\end{align*}
$$

From the second condition,
digit in unit's place $=$ digit in the ten's place +3

$$
\begin{align*}
& \therefore \mathrm{x}=\square+3 \\
& \therefore \mathrm{x}-\mathrm{y}=3 . \tag{II}
\end{align*}
$$

Adding equations (I) and (II)

$$
\begin{gathered}
2 x=\square \\
x=8
\end{gathered}
$$

Putting this value of $x$ in equation (I)

$$
\begin{aligned}
& x+y=13 \\
& 8+\square=13 \\
\therefore \quad & y=\square
\end{aligned}
$$

The original number is $10 \mathrm{y}+\mathrm{x}$

$$
\begin{aligned}
& =\square+8 \\
& =58
\end{aligned}
$$

(2) K antabai bought $1 \frac{1}{2} \mathrm{~kg}$ tea and 5 kg sugar from a shop. She paid ₹ 50 as return fare for rickshaw. Total expense was ₹ 700 . Then she realised that by ordering online the goods can be bought with free home delivery at the same price. So next month she placed the order online for 2 kg tea and 7 kg sugar. She paid ₹ 880 for that. Find the rate of sugar and tea per kg.
(3) To find number of notes that A nushka had, complete the following activity.

| Suppose that An | (100 and |
| :---: | :---: |
|  | $\downarrow$ |
| A nushka got ₹ 2500/- from A nand as denominations mentioned above $\qquad$ equation I | If A nand would have given her the amount by interchanging number of notes, Anushka would have received |
| ) | $\therefore$. $\qquad$ equation II |

(4) Sum of the present ages of $M$ anish and Savita is $31 . M$ anish's age 3 years ago was 4 times the age of Savita. Find their present ages.
$(5)^{\star}$ In a factory the ratio of salary of skilled and unskilled workers is $5: 3$. Total salary of one day of both of them is ₹ 720 . Find daily wages of skilled and unskilled workers.
(6) ${ }^{\star}$ Places $A$ and $B$ are 30 km apart and they are on a straight road. Hamid travels from $A$ to $B$ on bike. At the same time Joseph starts from $B$ on bike, travels towards $A$. They meet each other after 20 minutes. If Joseph would have started from B at the same time but in the opposite direction (instead of towards A) Hamid would have caught him after 3 hours. Find the speed of Hamid and Joseph.

## 2 Quadratic Equations

## Let's recall.

You have studied polynomials last year. You know types of polynomials according to their degree. When the degree of polynomial is 1 it is called a linear polynomial and if degree of a polynomial is 2 it is called a quadratic polynomial.

Activity : Classify the following polynomials as linear and quadratic.

$$
5 x+9, \quad x^{2}+3 x-5, \quad 3 x-7, \quad 3 x^{2}-5 x, \quad 5 x^{2}
$$

Quadratic polynomials

Now equate the quadratic polynomial to 0 and study the equation we get. Such type of equation is known as quadratic equation. In practical life we may use quadratic equations many times.
Ex. Sanket purchased a rectangular plot having area $200 \mathrm{~m}^{2}$. Length of the plot was 10 m more than its breadth. Find the length and the breadth of the plot.
Let the breadth of the plot be x metre.
$\therefore$ Length $=(x+10)$ metre
A rea of rectangle $=$ length $\times$ breadth
$\therefore 200=(x+10) \times x$
$\therefore 200=x^{2}+10 x$
That is $x^{2}+10 x=200$
$\therefore x^{2}+10 x-200=0$

Now, solving equation $x^{2}+10 x-200=0$, we will decide the dimensions of the plot.

Let us study how to solve the quadratic equation.

## Let's recall.

Activity: $x^{2}+3 x-5,3 x^{2}-5 x, 5 x^{2}$; W rite the polynomials in the index form. Observe the coefficients and fill in the boxes.

$$
x^{2}+3 x-5, \quad 3 x^{2}-5 x+0, \quad 5 x^{2}+0 x+0
$$

$\downarrow$ Coefficients of $x^{2}$ are 1 , 3 and 5 these coefficients are non zero.

- Coefficients of x are 3, $\square$ and $\square$ respectively.
- Constants terms are $\square, \square$ and $\square$ respectively. Here constant term of second and third polynomial is zero.

## Let's learn.

## Standard form of quadratic equation

The equation involving one variable and having 2 as the maximum index of the variable is called the quadratic equation.

General form is $a x^{2}+b x+c=0$
In $a x^{2}+b x+c=0, \quad a, b, c$ are real numbers and $a \neq 0$.
$a x^{2}+b x+c=0$ is the general form of quadratic equation.
Activity: Complete the following table

| Quadratic <br> Equation | General form | a | b | c |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{x}^{2}-4=0$ | $x^{2}+0 x-4=0$ | 1 | 0 | -4 |
| $y^{2}=2 y-7$ | $\cdots \cdots \cdots$ | $\cdots$ | $\cdots$ | $\cdots$ |
| $x^{2}+2 x=0$ | $\cdots \cdots \cdots$ | $\cdots$ | $\cdots$ | $\cdots$ |

SOS Solved Examples $\mathscr{S} \& \mathscr{S}$
Ex. (1) Decide which of the following are quadratic equations?
(1) $3 x^{2}-5 x+3=0$
(2) $9 y^{2}+5=0$
(3) $m^{3}-5 m^{2}+4=0$
(4) $(I+2)(I-5)=0$

Solution : (1) In the equation $3 x^{2}-5 x+3=0, x$ is the only variable and maximum index of the variable is 2
$\therefore$ It is a quadratic equation.
(2) In the equation $9 y^{2}+5=0, \square$ is the only variable and maximum index of the variable is $\square$
$\therefore$ It
 a quadratic equation.
(3) In the equation $\mathrm{m}^{3}-5 \mathrm{~m}^{2}+4=0, \square$ is the only variable but maximum index of the variable is not 2 .
$\therefore \mathrm{It}$ $\qquad$ a quadratic equation.
(4) $(1+2)(I-5)=0$
$\therefore 1(I-5)+2(I-5)=0$
$\left.\therefore\right|^{2}-5|+2|-10=0$
$\left.\therefore\right|^{2}-3 \mid-10=0$, In this equation $\square$ is the only variable and maximum index of the variable is $\qquad$ .
$\square$ a quadratic equation.

## Let's learn.

## Roots of a quadratic equation

In the previous class you have studied that if value of the polynomial is zero for $x=a$ then $(x-a)$ is a factor of that polynomial. That is if $p(x)$ is a polynomial and $p(a)=0$ then $(x-a)$ is a factor of $p(x)$. In this case 'a' is the root or solution of $p(x)=0$

## For Example,

Let $x=-6$ in the polynomial $x^{2}+5 x-6$

$$
\begin{aligned}
& x^{2}+5 x-6=(-6)^{2}+5 \times(-6)-6 \\
& =36-30-6=0
\end{aligned}
$$

$\therefore \mathrm{x}=-6$ is a solution of the equation.
Hence -6 is one root of the equation $x^{2}+5 x-6=0$

$$
\begin{aligned}
& \text { Let } x=2 \text { in polynomial } x^{2}+5 x-6 \\
& \qquad \begin{array}{l}
x^{2}+5 x-6=2^{2}+5 \times 2-6 \\
=4+10-6 \\
=8 \neq 0
\end{array}
\end{aligned}
$$

$\therefore \quad x=2$ is not a solution of the equation $x^{2}+5 x-6=0$

## sscs Solved Example $\mathscr{S} \&$

Ex. $2 x^{2}-7 x+6=0$ check whether (i) $x=\frac{3}{2}$, (ii) $x=-2$ are solutions of the equations.
Solution: (i) Put $x=\frac{3}{2}$ in the polynomial $2 x^{2}-7 x+6$

$$
2 x^{2}-7 x+6=2\left(\frac{3}{2}\right)^{2}-7\left(\frac{3}{2}\right)+6
$$

$$
\begin{aligned}
& =2 \times \frac{9}{4}-\frac{21}{2}+6 \\
& =\frac{9}{2}-\frac{21}{2}+\frac{12}{2}=0
\end{aligned}
$$

$\therefore \mathrm{x}=\frac{3}{2}$ is a solution of the equation.
(ii) Let $x=-2$ in $2 x^{2}-7 x+6$

$$
\begin{aligned}
2 x^{2}-7 x+6 & =2(-2)^{2}-7(-2)+6 \\
& =2 \times 4+14+6 \\
& =28 \neq 0
\end{aligned}
$$

$\therefore \mathrm{x}=-2$ is not a solution of the equation.
Activity: If $x=5$ is a root of equation $k x^{2}-14 x-5=0$ then find the value of $k$ by completing the following activity.
Solution : One of the roots of equation $k x^{2}-14 x-5=0$ is $\square$
$\therefore$ Now Let $\mathrm{x}=$ $\square$ in the equation.

$\square$ $-5=0$
$\therefore 25 k-70-5=0$
$25 \mathrm{k}-\square=0$
$25 \mathrm{k}=$ $\square$
$\therefore \mathrm{k}=\frac{\square}{\square}=3$

## Let's remember!

(1) $a x^{2}+b x+c=0$ is the general form of equation where $a, b, c$ are real numbers and ' $a$ ' is non zero.
(2) The values of variable which satisfy the equation [or the value for which both the sides of equation are equal] are called solutions or roots of the equation.

## Practice Set 2.1

1. Write any two quadratic equations.
2. Decide which of the following are quadratic equations.
(1) $x^{2}+5 x-2=0$
(2) $y^{2}=5 y-10$
(3) $y^{2}+\frac{1}{y}=2$
(4) $x+\frac{1}{x}=-2$
(5) $(m+2)(m-5)=0$
(6) $m^{3}+3 m^{2}-2=3 m^{3}$
3. $W$ rite the following equations in the form $a x^{2}+b x+c=0$, then write the values of $a, b, c$ for each equation.
(1) $2 y=10-y^{2}$
(2) $(x-1)^{2}=2 x+3$
(3) $x^{2}+5 x=-(3-x)$
(4) $3 m^{2}=2 m^{2}-9$
(5) $P(3+6 p)=-5$
(6) $x^{2}-9=13$
4. Determine whether the values given against each of the quadratic equation are the roots of the equation.
(1) $x^{2}+4 x-5=0, x=1,-1$
(2) $2 m^{2}-5 m=0, m=2, \frac{5}{2}$
5. Find $k$ if $x=3$ is a root of equation $k x^{2}-10 x+3=0$.
6. One of the roots of equation $\left.5 m^{2}+2 m, k\right)=0$ is $\frac{-7}{5}$. Complete the following activity to find the value of ${ }^{k}$.

$$
m=\frac{-7}{5}
$$

Solution: $-1 /$ is a root of quadratic equation $5 m^{2}+2 m+k=0$
$\begin{array}{ll} & \text { Put } m=-7 / 5 \text { in the equation. } \\ 5 \times-7 / /^{2}+2 \times-7 / 5+k=0 \quad 1 \\ -7 \times \frac{49}{28 / 5}\end{array}+\left(-\frac{14}{5}\right)+k=0$

$$
\begin{gathered}
\frac{49}{5}+\sqrt{14}+k=0 \\
7+k=0 \\
k=-7
\end{gathered}
$$

## Let's recall.

Last year you have studied the methods to find the factors of quadratic polynomials like $x^{2}-4 x-5,2 m^{2}-5 m, a^{2}-25$. Try the following activity and revise the same.

Activity : Find the factors of the following polynomials.

$$
\begin{aligned}
& \text { (1) } x^{2}-4 x-5 \\
& =x^{2}-5 x+1 x-5 \\
& =x(\ldots)+1(\ldots) \\
& =(\ldots)(\ldots)
\end{aligned}
$$

(2) $2 m^{2}-5 m$
(3) $a^{2}-25$
$=a^{2}-5^{2}$
$=(\ldots)(\ldots)$

## Let's learn.

## Solutions of a quadratic equation by factorisation

By substituting arbitrary values for the variable and deciding the roots of quadratic equation is a time consuming process. Let us learn to use factorisation method to find the roots of the given quadratic equation.

$$
x^{2}-4 x-5=(x-5)(x+1)
$$

$(x-5)$ and $(x+1)$ are two linear factors of quadratic polynomial $x^{2}-4 x-5$.
So the quadratic equation obtained from $x^{2}-4 x-5$ can be written as $(x-5)(x+1)=0$
If product of two numbers is zero then at least one of them is zero.

$$
\therefore x-5=0 \text { or } x+1=0
$$

$\therefore x=5$ or $x=-1$
$\therefore \quad 5$ and the -1 are the roots of the given quadratic equation.
While solving the equation first we obtained the linear factors. So we call this method as 'factorization method' of solving quadratic equation.

## \&\&S Solved Examples S\&\&

Ex. Solve the following quadratic equations by factorisation.
(1) $m^{2}-14 m+13=0$
(2) $3 x^{2}-x-10=0$
(3) $3 y^{2}=15 y$
(4) $x^{2}=3$
(5) $6 \sqrt{3} x^{2}+7 x=\sqrt{3}$
(1) $m^{2}-14 m+13=0$
$\therefore m^{2}-13 m-1 m+13=0$
$\therefore \overline{m(m-13)}-1(m-13)=0$
$\therefore(m-13)(m-1)=0$
$\therefore m-13=0$ or $m-1=0$
$\therefore m=13$ or $m=1$
$\therefore 13$ and 1 are the roots of the given quadratic equation.
(2) $3 x^{2}-x-10=0$
$\therefore 3 x^{2}-6 x+5 x-10=0$
$\therefore 3 x(x-2)+5(x-2)=0$
$\therefore(3 x+5)(x-2)=0$
$\therefore(3 x+5)=0$ or $(x-2)=0$
$\therefore \mathrm{x}=-\frac{5}{3}$ or $\mathrm{x}=2$
$\therefore-\frac{5}{3}$, and 2 are the roots of the given quadratic equation.
(3) $3 \mathrm{y}^{2}=15 \mathrm{y}$
$\therefore 3 y^{2}-15 y=0$
$\therefore 3 y(y-5)=0$
$\therefore \quad 3 y=0$ or $(y-5)=0$
$\therefore y=0$ or $y=5$
$\therefore 0$ and 5 are the roots of quadratic equation.
(4) $X^{2}=3$
$\therefore \mathrm{x}^{2}-3=0$
$\therefore x^{2}-(\sqrt{3})^{2}=0$
$\therefore(X+\sqrt{3})(X-\sqrt{3})=0$
$\therefore(x+\sqrt{3})=0$ or $(x-\sqrt{3})=0$
$\therefore \quad x=-\sqrt{3}$ or $x=\sqrt{3}$
$\therefore-\sqrt{3}$ and $\sqrt{3}$ are the roots of given quadratic equation.
(5) $6 \sqrt{3} x^{2}+7 x=\sqrt{3}$

$$
\therefore 6 \sqrt{3} x^{2}+7 x-\sqrt{3}=0
$$

$\therefore 6 \sqrt{3} x^{2}+9 x-2 x-\sqrt{3}=0$
$\therefore 3 \sqrt{3} x(2 x+\sqrt{3})-1(2 x+\sqrt{3})=0$

$$
\begin{aligned}
& \overbrace{9}^{6 \sqrt{3} \times-\sqrt{3}}=-18 \\
& 9=3 \sqrt{3} \times \sqrt{3}
\end{aligned}
$$

$\therefore(2 x+\sqrt{3})(3 \sqrt{3} x-1)=0$
$\therefore 2 x+\sqrt{3}=0$ or $3 \sqrt{3} x-1=0$
$\therefore \quad 2 x=-\sqrt{3}$ or $3 \sqrt{3} x=1$
$\therefore \quad x=-\frac{\sqrt{3}}{2}$ or $x=\frac{1}{3 \sqrt{3}}$
$5 m^{2}-22 m-15=0 \quad \therefore-\frac{\sqrt{3}}{2}$ and $\frac{1}{3 \sqrt{3}}$ are the roots of the given quadratic equation.

## Practice Set 2.2

$-\lambda$. Solve the following quadratic equations by factorisation.
(1) $x^{2}-\sqrt{15 x}-54=0 \quad V 2 x^{2}+(1 x)-20=0$
(3) $2 y^{2}+27 y+13=0$

(4) $5 \mathrm{~m}^{2}=22 \mathrm{~m}+15$
(s) $2 x^{2}-2 x+\frac{1}{2}=0$
(6) $6 X-\frac{2}{x}=1$
$=-15$
(7) $\sqrt{2} X^{2}+7 X+5 \sqrt{2}=0$ to solve this quadratic equation by factorisation,
complete the following activity.
Solution: $\quad \sqrt{2} X^{2}+7 X+5 \sqrt{2}=0$

$$
\sqrt{2} x^{2}+\square+\square+5 \sqrt{2}=0
$$

$$
x(\ldots . .)+\sqrt{2}(\ldots . .)=0
$$

$$
\begin{array}{r}
x^{2}-9 x-6 x+54=0 \\
x(x-9)-6(x-9)=0 \\
(x-9)(x-6)=0 \\
x=9 \text { or } x=6
\end{array}
$$

$(\ldots .).(X+\sqrt{2})=0$
$(\ldots \ldots)=0$ or $(x+\sqrt{2})=0$
$\therefore \mathrm{x}=\square$ or $\mathrm{x}=-\sqrt{2}$
$\therefore \square$ and $-\sqrt{2}$ are roots of the equation.
(8) $3 \mathrm{X}^{2}-2 \sqrt{6} \mathrm{X}+2=0$
(9) $2 \mathrm{~m}(\mathrm{~m}-24)=50$
(10) $25 \mathrm{~m}^{2}=9$
(11) $7 \mathrm{~m}^{2}=21 \mathrm{~m}$
(12) $m^{2}-11=0$

## Let's learn.

Solution of a quadratic equation by completing the square
Teacher: Is $x^{2}+10 x+2=0$ a quadratic equation or not ?

Yogesh : $Y$ es Sir, because it is in the form $a x^{2}+b x+c=0$, maximum index of the variable $x$ is 2 and ' $a$ ' is non zero.
Teacher : Can you solve this equation?
Yogesh: No Sir, because it is not possible to find the factors of 2 whose sum is 10 .
Teacher : Right, so we have to use another method to solve such equations. Let us learn the method.
Let us add a suitable term to $x^{2}+10 x$ so that the new expression would be a complete square.

If $\frac{x^{2}+10}{} x+\left(\underline{x}=\left(\underline{x+a)^{2}} \geq\right.\right.$

then $\underline{x^{2}}+10 x+k=2 x^{2}+2 a x+a^{2}$
$=$
$\therefore 10=2 \mathrm{a}$ and $\mathrm{k}=\mathrm{a}^{2}$
by equating the coefficients for the variable x and constant term
$\therefore a=5 \quad \therefore k=a^{2}=(5)^{2}=25$
$\therefore \mathrm{x}^{2}+10 \mathrm{x}+2=(\mathrm{x}+5)^{2}-25+2=(\mathrm{x}+5)^{2}-23$
Now can you solve the equation $X^{2}+10 X+2=0$ ?
Rehana : $Y$ es Sir, left side of the equation is now difference of two squares and we can factorise it.
$(X+5)^{2}-(\sqrt{23})^{2}=0$
$\therefore(\mathrm{X}+5+\sqrt{23})(\mathrm{X}+5-\sqrt{23})=0$
$\therefore x+5+\sqrt{23}=0$ or $x+5-\sqrt{23}=0$
$\therefore \mathrm{X}=-5-\sqrt{23}$ or $\mathrm{X}=-5+\sqrt{23}$

Hameed : Sir, M ay I suggest another way ?

$$
\begin{aligned}
& (\mathrm{X}+5)^{2}-(\sqrt{23})^{2}=0 \\
& \therefore(\mathrm{X}+5)^{2}=(\sqrt{23})^{2} \\
& \therefore \mathrm{X}+5=\sqrt{23} \text { or } \mathrm{X}+5=-\sqrt{23} \\
& \therefore \mathrm{X}=-5+\sqrt{23} \text { or } \mathrm{X}=-5-\sqrt{23}
\end{aligned}
$$

## S\&\&Solved Examples $\mathscr{S} \mathscr{S}$

Ex. (1) Solve: $5 x^{2}-4 x-3=0$
Solution : It is convenient to make coefficient of $x^{2}$ as 1 and then convert the equation as the of difference of two squares, so dividing the equation by 5 , we get, $x^{2}-\frac{4}{5} x-\frac{3}{5}=0$ now if $x^{2}-\frac{4}{5} x+k=(x-a)^{2}$ then $x^{2}-\frac{4}{5} x+k=x^{2}-2 a x+a^{2}$.
compare the terms in $x^{2}-\frac{4}{5} x$ and $x^{2}-2 a x$.
$-2 \mathrm{ax}=-\frac{4}{5} \mathrm{x} \quad \therefore \mathrm{a}=\frac{1}{2} \times \frac{4}{5}=\frac{2}{5}$
$\therefore k=a^{2}=\left(\frac{2}{5}\right)^{2}=\frac{4}{25}$
Now, $x^{2}-\frac{4}{5} x-\frac{3}{5}=0$
$\therefore \mathrm{X}^{2}-\frac{4}{5} \mathrm{x}+\frac{4}{25}-\frac{4}{25}-\frac{3}{5}=0$
When equation is in the form
$x^{2}+b x+c=0$, it can be written as
$x^{2}+b x+\left(\frac{b}{2}\right)^{2}-\left(\frac{b}{2}\right)^{2}+c=0$ that is,
$\left(x+\frac{b}{2}\right)^{2}=\left(\frac{b}{2}\right)^{2}-c$
$\therefore\left(x-\frac{2}{5}\right)^{2}-\left(\frac{4}{25}+\frac{3}{5}\right)=0$
$\therefore\left(x-\frac{2}{5}\right)^{2}-\left(\frac{19}{25}\right)=0$
$\therefore\left(x-\frac{2}{5}\right)^{2}=\left(\frac{19}{25}\right)$
$\therefore x-\frac{2}{5}=\frac{\sqrt{19}}{5}$ or $x-\frac{2}{5}=-\frac{\sqrt{19}}{5}$
$\therefore \mathrm{X}=\frac{2}{5}+\frac{\sqrt{19}}{5}$ or $\mathrm{X}=\frac{2}{5}-\frac{\sqrt{19}}{5}$
$\therefore \mathrm{X}=\frac{2+\sqrt{19}}{5}$ or $\mathrm{X}=\frac{2-\sqrt{19}}{5}$
$\therefore \frac{2+\sqrt{19}}{5}$ and $\frac{2-\sqrt{19}}{5}$ are roots of the equation.
 M ethod I : Completing the square.

$$
\begin{array}{cll} 
& x^{2}+8 x-48=0 & x^{2}+8 x-48=0 \\
x^{2}+2 x 4 x+4^{2} \\
\begin{array}{c}
\downarrow \\
(x+4)^{2}
\end{array} & \therefore(x+4)^{2}-64=0 & \therefore x^{2}+12 x-4 x-48=0 \\
\therefore(x+4)^{2}=64=8 & \therefore x(x+12)-4(x+12)=0 \\
& \therefore x+4=80 r x+4=-8 \\
& \therefore x=4 \text { or } x=-12-8-4 & \therefore x+12)(x-4)=0 \\
& \therefore x=-12 \text { or } x=4
\end{array}
$$

$2 a=8 \quad a=4 \quad k=a^{2}$ M ethod II : Factorisation $K=16$

## Practice Set 2.3

Solve the following quadratic equations by completing the square method.
(1) $x^{2}+x-20=0$
(2) $x^{2}+2 x-5=0$
(3) $\overline{m^{2}-5 m}=-3$
(4) $9 y^{2}-12 y+2=0$
(5) $2 y^{2}+9 y+10=0$
(6) $5 \mathrm{X}^{2}=4 \mathrm{X}+7$

## Let's learn.

## Formula for solving a quadratic equation

$\mathrm{ax}+\mathrm{bx}+\mathrm{c}$, Divide the polynomial by $\mathrm{a}(\because \mathrm{a} \neq 0)$ to get $\mathrm{x}^{2}+\frac{b}{a} \mathrm{x}+\frac{c}{a}$.
Let us write the polynomial $\mathrm{x}^{2}+\frac{b}{a} \mathrm{x}+\frac{c}{a}$ in the form of difference of two square numbers. Now we can obtain roots or solutions of equation $\mathrm{X}^{2}+\frac{b}{a} \mathrm{X}+\frac{c}{a}=0$ which is equivalent to $a x^{2}+b x+c=0$.

$$
\begin{aligned}
& \mathrm{ax}+\mathrm{bx}+\mathrm{C}=0 \ldots \text { (I) } \\
& \mathrm{X}^{2}+\frac{b}{a} \mathrm{X}+\frac{c}{a}=0 \ldots \text { dividing both sides by a } \\
& \therefore \mathrm{X}^{2}+\frac{b}{a} \mathrm{X}+\left(\frac{b}{2 a}\right)^{2}-\left(\frac{b}{2 a}\right)^{2}+\frac{c}{a}=0 \\
& \therefore\left(x+\frac{b}{2 a}\right)^{2}-\frac{b^{2}}{4 a^{2}}+\frac{c}{a}=0
\end{aligned}
$$

$$
\begin{aligned}
& \therefore\left(x+\frac{b}{2 a}\right)^{2}-\frac{b^{2}-4 a c}{4 a^{2}}=0 \quad \therefore\left(x+\frac{b}{2 a}\right)^{2}=\frac{b^{2}-4 a c}{4 a^{2}} \\
& \therefore x+\frac{b}{2 a}=\sqrt{\frac{b^{2}-4 a c}{4 a^{2}}} \text { or } x+\frac{b}{2 a}=-\sqrt{\frac{b^{2}-4 a c}{4 a^{2}}} \\
& \therefore X=-\frac{b}{2 a}+\sqrt{\frac{b^{2}-4 a c}{4 a^{2}}} \text { or } \mathrm{X}=-\frac{b}{2 a}-\sqrt{\frac{b^{2}-4 a c}{4 a^{2}}} \\
& \therefore X=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a} \text { or } \mathrm{X}=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}
\end{aligned}
$$

In short the solution is written as $X=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ and these values are denoted by $\alpha, \beta$.
$\therefore \alpha=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}, \quad \beta=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}$.
The values of $a, b, c$ from equation $a x^{2}+b x+c=0$ are substituted in $\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ and further simplified to obtain the roots of the equation. So $X=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ is the formula used to solve quadratic equation. Out of the two roots any one ${ }^{2 a}$ can be represented by $\alpha$ and the other by $\beta$.

That is, instead (I) we can write $\alpha=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}, \beta=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a} \ldots$
Note that: If $\alpha=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}$ then $\alpha>\beta$, if $\alpha=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}$ then $\alpha<\beta$

## \&\&\&Solved Examples $\mathscr{O} \mathscr{S}$

Solve quadratic equations using formula.

$$
\text { Ex. (1) } \quad m^{2}-14 m+13=0
$$

Solution: $\mathrm{m}^{2}-14 \mathrm{~m}+13=0$ comparing

$$
\text { with } a x^{2}+b x+c=0
$$

we get $a=1, b=-14, C=13$,

$$
\begin{aligned}
\therefore b^{2}-4 a c & =(-14)^{2}-4 \times 1 \times 13 \\
& =196-52 \\
& =144
\end{aligned}
$$

$$
\begin{aligned}
& \mathrm{m}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \\
&=\frac{-(-14) \pm \sqrt{144}}{2 \times 1} \\
&=\frac{14 \pm 12}{2} \\
& \therefore \mathrm{~m}=\frac{14+12}{2} \text { or } \mathrm{m}=\frac{14-12}{2} \\
& \therefore \mathrm{~m}=\frac{26}{2} \text { or } \mathrm{m}=\frac{2}{2} \\
& \therefore \mathrm{~m}=13 \text { or } \mathrm{m}=1 \\
& \therefore 13 \text { and } 1 \text { are roots of the equation. }
\end{aligned}
$$

Ex. (2): $\mathrm{X}^{2}+10 \mathrm{X}+2=0$
Solution: $x^{2}+10 x+2=0$ comparing with $a x^{2}+b x+c=0$

$$
\begin{aligned}
& \text { we get } a=1, b=10, c=2, \\
& \begin{aligned}
\therefore b^{2}-4 a c & =(10)^{2}-4 \times 1 \times 2 \\
& =100-8 \\
& =92 \\
x & =\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \\
& =\frac{-10 \pm \sqrt{92}}{2 \times 1} \\
x & =\frac{-10 \pm \sqrt{4 \times 23}}{2} \\
& =\frac{-10 \pm 2 \sqrt{23}}{2} \\
& =\frac{2(-5 \pm \sqrt{23})}{2} \\
\therefore \quad x & =-5 \pm \sqrt{23} \\
\therefore \quad x & =-5+\sqrt{23} \text { or } x=-5-\sqrt{23}
\end{aligned}
\end{aligned}
$$

$\therefore$ the roots of the given quadratic equation are $-5+\sqrt{23}$ and $-5-\sqrt{23}$.
Ex. (3): $\mathrm{X}^{2}-2 \mathrm{X}-3=0$
Solution: comparing with $a x^{2}+b x+c=0$

$$
\text { we get } a=1, b=-2, c=-3 \text {, }
$$

$\therefore \mathrm{b}^{2}-4 \mathrm{ac}=(-2)^{2}-4 \times 1 \times(-3)=4+12=16$

$$
\begin{aligned}
& \therefore x=\frac{-(-2)+\sqrt{16}}{2} \text { or } x=\frac{-(-2)-\sqrt{16}}{2} \\
& =\frac{2+4}{2} \text { or } \frac{2-4}{2} \\
& =3 \text { or }-1
\end{aligned}
$$

## For more information :

Let us understand the solution of equation $x^{2}-2 x-3=0$ when solved graphically. $x^{2}-2 x-3=0 \quad \therefore \quad x^{2}=2 x+3$ The values which satisfy the equation are the roots of the equation.

Let $\mathrm{y}=\mathrm{x}^{2}=2 \mathrm{x}+3$. Let us draw graph of $\mathrm{y}=\mathrm{x}^{2}$ and $\mathrm{y}=2 \mathrm{x}+3$

$$
y=x^{2}
$$

| X | 3 | 2 | 1 | 0 | -1 | -2 | -3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| y | 9 | 4 | 1 | 0 | 1 | 4 | 9 |

$$
y=2 x+3
$$

| X | -1 | 0 | 1 | -2 |
| :---: | :---: | :---: | :---: | :---: |
| y | 1 | 3 | 5 | -1 |

These graphs intersect each other at $(-1,1)$ and $(3,9)$.
$\therefore$ The solutions of $x^{2}=2 x+3$ i.e $x^{2}-2 x-3=0$ are $x=-1$ or $x=3$.

In the adjacent diagram the graphs of equations $y=x^{2}$ and $y=2 x+3$ are given. From their points of intersection, observe and understand how you get the solutions of $x^{2}=2 x+3$ i.e solutions of $x^{2}-2 x-3=0$.

Ex. (4) $25 x^{2}+30 x+9=0$
Solution: $25 x^{2}+30 x+9=0$ comparing the equation with $a x^{2}+b x+c=0$ we get $a=25, b=30, c=9$,
$\therefore \mathrm{b}^{2}-4 \mathrm{ac}=(30)^{2}-4 \times 25 \times 9$ $=900-900=0$
$\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ $=\frac{-30 \pm \sqrt{0}}{2 \times 25}$
$\therefore \quad \mathrm{x}=\frac{-30+0}{50}$ or $\mathrm{x}=\frac{-30-0}{50}$
$\therefore \quad \mathrm{x}=-\frac{30}{50}$ or $\mathrm{x}=-\frac{30}{50}$
$\therefore \quad \mathrm{x}=-\frac{3}{5}$ or $\mathrm{x}=-\frac{3}{5}$
that is both the roots are equal.
Also note that $25 x^{2}+30 x+9=0$ means $(5 x+3)^{2}=0$

Ex. (5) $x^{2}+x+5=0$
Solution : $x^{2}+x+5=0$ comparing with

$$
a x^{2}+b x+c=0
$$

$$
\text { we get } a=1, b=1, c=5 \text {, }
$$

$$
\therefore b^{2}-4 a c=(1)^{2}-4 \times 1 \times 5
$$

$$
=1-20
$$

$$
=-19
$$

$$
\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}
$$

$$
=\frac{-1 \pm \sqrt{-19}}{2 \times 1}
$$

$$
=\frac{-1 \pm \sqrt{-19}}{2}
$$

But $\sqrt{-19}$ is not a real number. Hence roots of the equation are not real.

Activity: Solve the equation $2 x^{2}+13 x+15=0$ by factorisation method, by completing the square method and by using the formula. Verify that you will get the same roots every time.

## Practice Set 2.4

1. Compare the given quadratic equations to the general form and write values of $a, b, c$.
(1) $x^{2}-7 x+5=0$
(2) $2 m^{2}=5 m-5$
(3) $y^{2}=7 y$
2. Solve using formula.
(1) $x^{2}+6 x+5=0$
(2) $x^{2}-3 x-2=0$
(3) $3 m^{2}+2 m-7=0$
(4) $5 m^{2}-4 m-2=0$
(5) $y^{2}+\frac{1}{3} y=2$
(6) $5 x^{2}+13 x+8=0$
(3) With the help of the flow chart given below solve the equation $x^{2}+2 \sqrt{3} x+3=0$ using the formula.
Solution :

| compare equations $x^{2}+2 \sqrt{3} x+3=0$ and $a x^{2}+b x+c=0$ find the values of $a, b, c$. | Find value of $b^{2}-4 a c$ | W rite formula to solve quadratic equation. | Substitute values of $a, b, c$ and find roots. |
| :---: | :---: | :---: | :---: |
|  | Let's learn. |  |  |

## Nature of roots of a quadratic equation

You know that $\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ are roots of quadratic equation $\mathrm{ax}^{2}+\mathrm{bx}+\mathrm{c}=0$
(1) If $\mathrm{b}^{2}-4 \mathrm{c}=0$ then, $\mathrm{x}=\frac{-b \pm \sqrt{0}}{2 a} \therefore \mathrm{x}=\frac{-b+0}{2 a}$ or $\mathrm{x}=\frac{-b-0}{2 a}$
$\therefore$ the roots of the quadratic equation are real and equal.
(2) If $\mathrm{b}^{2}-4 \mathrm{ac}>0$, then $\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$
i.e. $\mathrm{x}=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}$ and $\mathrm{x}=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}$
$\therefore$ roots of the quadratic equation are real and unequal.
(3) If $b^{2}-4 a c<0$ then $\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$ are not real numbers $\therefore$ the roots of quadratic equations are not real.

Nature of roots of quadratic equation is determined by the value of $b^{2}-4 a c$. $b^{2}-4 a c$ is called discriminant of a quadratic equation and is denoted by Greek letter $\Delta$ (Delta)

Activity - Fill in the blanks.
(1)

(2)

(3) $\square$
$\rightarrow$

## SS\&SSolved examples $\mathscr{E}$ SS

Ex. (1) Find the value of the discriminant of the equation $x^{2}+10 x-7=0$
Solution: Comparing $x^{2}+10 x-7=0$ with $a x^{2}+b x+c=0$.

$$
\begin{gathered}
a=1, b=10, c=-7, \\
\therefore b^{2}-4 a c=10^{2}-4 \times 1 \times-7 \\
=100+28 \\
=
\end{gathered}
$$

Ex. (2) Determine nature of roots of the quadratic equations.
(i) $2 x^{2}-5 x+7=0$
(ii) $x^{2}+2 x-9=0$

Solution : Compare $2 x^{2}-5 x+7=0$ with

$$
\begin{aligned}
a x^{2}+b x & +c=0 \\
a=2, b & =-5, c=7, \\
\therefore b^{2}-4 a c & =(-5)^{2}-4 \times 2 \times 7 \\
D & =25-56 \\
D & =-31
\end{aligned}
$$

$$
\therefore \mathrm{b}^{2}-4 \mathrm{ac}<0
$$

$\therefore$ the roots of the equation are not real.

Solution : Compare $x^{2}+2 x-9=0$ with

$$
\begin{aligned}
& a x^{2}+b x+c=0 . \\
& a=\square, b=2, c=\square,
\end{aligned}
$$

$$
\therefore \mathrm{b}^{2}-4 \mathrm{ac}=2^{2}-4 \times \square \times \square
$$

$$
D=4-
$$

$\square$

$$
D=40
$$

$$
\therefore \mathrm{b}^{2}-4 \mathrm{ac}>0
$$

$\therefore$ the roots of the equation are real and unequal.

Ex. (3) $\sqrt{3} x^{2}+2 \sqrt{3} x+\sqrt{3}=0$
Solution : Compare $\sqrt{3} x^{2}+2 \sqrt{3} x+\sqrt{3}=0$ with $a x^{2}+b x+c=0$
We get $a=\sqrt{3}, b=2 \sqrt{3}, c=\sqrt{3}$,

$$
\begin{aligned}
\therefore b^{2}-4 a c & =(2 \sqrt{3})^{2}-4 \times \sqrt{3} \times \sqrt{3} \\
& =4 \times 3-4 \times 3 \\
& =12-12 \\
& =0
\end{aligned}
$$

$\therefore b^{2}-4 a c=0$
$\therefore$ Roots of the equation are real and equal.

## Let's learn.

The relation between roots of the quadratic equation and coefficients
$\alpha$ and $\beta$ are the roots of the equation $a x^{2}+b x+c=0$ then,

$$
\begin{aligned}
& \alpha+\beta=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}+\frac{-b-\sqrt{b^{2}-4 a c}}{2 a} \\
&=\frac{-b+\sqrt{b^{2}-4 a c}-b-\sqrt{b^{2}-4 a c}}{2 a} \\
&=-\frac{2 b}{2 a} \\
& \therefore \alpha+\beta=-\frac{b}{a}
\end{aligned}
$$

$$
\begin{aligned}
\alpha \times \beta & =\frac{-b+\sqrt{b^{2}-4 a c}}{2 a} \times \frac{-b-\sqrt{b^{2}-4 a c}}{2 a} \\
& =\frac{\left(-b+\sqrt{b^{2}-4 a c}\right) \times\left(-b-\sqrt{b^{2}-4 a c}\right)}{4 a^{2}} \\
& =\frac{b^{2}-\left(b^{2}-4 a c\right)}{4 a^{2}} \\
& =\frac{4 a c}{4 a^{2}} \\
& =\frac{c}{a} \\
& \therefore \alpha \beta=\frac{c}{a}
\end{aligned}
$$

Activity : Fill in the empty boxes below properly

$$
\text { For } 10 x^{2}+10 x+1=0,
$$

$$
\alpha+\beta=\square \text { and } \alpha \times \beta=\square
$$

S\&\&SSolved examples S\&\&
Ex. (1) If $\alpha$ and $\beta$ are the roots of the quadratic equation $2 x^{2}+6 x-5=0$, then find $(\alpha+\beta)$ and $\alpha \times \beta$.

Solution : Comparing $2 x^{2}+6 x-5=0$ with $a x^{2}+b x+c=0$.
$\therefore a=2, b=6, c=-5$
$\therefore \alpha+\beta=-\frac{b}{a}=-\frac{6}{2}=-3$
and $\alpha \times \beta=\frac{c}{a}=\frac{-5}{2}$

Ex. (2) The difference between the roots of the equation $x^{2}-13 x+k=0$ is 7 find $k$.
Solution : Comparing $x^{2}-13 x+k=0$ with $a x^{2}+b x+c=0$

$$
a=1, b=-13, c=k
$$

Let $\alpha$ and $\beta$ be the roots of the equation.

$$
\alpha+\beta=-\frac{b}{a}=-\frac{(-13)}{1}=13 \ldots \text { (1) }
$$

But $\alpha-\beta=7 \ldots$........ (given) (II)

$$
2 \alpha=20 \ldots(\operatorname{adding}(\mathrm{I}) \text { and (II)) }
$$

$$
\therefore \alpha=10
$$

$$
\therefore 10+\beta=13 \ldots(\text { from }(\mathrm{I}))
$$

$$
\therefore \beta=13-10
$$

$$
\therefore \beta=3
$$

But $\alpha \times \beta=\frac{c}{a}$

$$
\begin{aligned}
& \therefore 10 \times 3=\frac{\mathrm{k}}{1} \\
& \therefore \mathrm{k}=30
\end{aligned}
$$

Ex. (3) If $\alpha$ and $\beta$ are the roots of $x^{2}+5 x-1=0$ then find -

$$
\text { (i) } \alpha^{3}+\beta^{3} \text { (ii) } \alpha^{2}+\beta^{2}
$$

Solution: $x^{2}+5 x-1=0$
(ii) $\alpha^{2}+\beta^{2}=(\alpha+\beta)^{2}-2 \alpha \beta$

$$
\begin{aligned}
& =(-5)^{2}-2 \times(-1) \\
& =25+2
\end{aligned}
$$

$$
\alpha^{2}+\beta^{2}=27
$$

$$
\begin{aligned}
& a=1, b=5, c=-1 \\
& \alpha+\beta=-\frac{b}{a}=\frac{-5}{1}=-5 \\
& \alpha \times \beta=\frac{c}{a}=\frac{-1}{1}=-1 \\
& \text { (i) } \alpha^{3}+\beta^{3}=(\alpha+\beta)^{3}-3 \alpha \beta(\alpha+\beta) \\
& =(-5)^{3}-3 \times(-1) \times(-5) \\
& =-125-15 \\
& \alpha^{3}+\beta^{3}=-140
\end{aligned}
$$

## Let's learn.

To obtain a quadratic equation having given roots
Let $\alpha$ and $\beta$ be the roots of a quadratic equation in variable $X$
$\therefore \mathrm{X}=\alpha$ or $\mathrm{X}=\beta$
$\therefore \mathrm{X}-\alpha=0$ or $\mathrm{X}-\beta=0$
$\therefore(x-\alpha)(x-\beta)=0$
$\therefore x^{2}-(\alpha+\beta) x+\alpha \beta=0$
When two roots of equation are given then quadratic equation can be obtained as $\mathrm{X}^{2}-$ (addition of roots) $\mathrm{X}+$ product of the roots $=0$.

Activity (I): W rite the quadratic equation if addition of the roots is 10 and product of the roots $=9$
$\therefore$ Quadratic equation : $\mathrm{x}^{2}-\square \mathrm{x}+\square=\square$
Activity (II): W hat will be the quadratic equation if $\alpha=2, \beta=5$
It can be written as $x^{2}$ - $\square$
$\square$ $x+\square \times$ $\square=0$.
that is $\square x^{2}-\square x+\square=0$.
Note that, if this equation is multiplied by any non zero number, the roots of the equation are not changed.

## ©S\&SSolved examples $\mathscr{E}$ \& $\mathscr{}$

Ex. Obtain the quadratic equation if roots are $-3,-7$.
Solution: Let $\alpha=-3$ and $\beta=-7$
$\therefore \alpha+\beta=(-3)+(-7)=-10$ and $\alpha \times \beta=(-3) \times(-7)=21$
$\therefore$ and quadratic equation is, $x^{2}-(\alpha+\beta) x+\alpha \beta=0$
$\therefore x^{2}-(-10) x+21=0$
$\therefore \mathrm{x}^{2}+10 \mathrm{x}+21=0$

## Let's remember!

(1) If $\alpha$ and $\beta$ are roots of quadratic equation $a x^{2}+b x+c=0$,
(i) $\alpha=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}$ and $\beta=\frac{-b-\sqrt{b^{2}-4 a c}}{2 a}$
(ii) $\alpha+\beta=-\frac{b}{a}$ and $\alpha \times \beta=\frac{c}{a}$
(2) Nature of roots of quadratic equation $a x^{2}+b x+c=0$ depends on the value of $b^{2}-4 a c$. Hence $b^{2}-4 a c$ is called discriminant and is denoted by Greek letter $\Delta$.
(3) If $\Delta=0$ The roots of quadratic equation are real and equal.

If $\Delta>0$ then the roots of quadratic equation are real and unequal.
If $\Delta<0$ then the roots of quadratic equation are not real.
(4) The quadratic equation, whose roots are $\alpha$ and $\beta$ is

$$
x^{2}-(\alpha+\beta) x+\alpha \beta=0
$$

## Practice Set 2.5

1. Activity : Fill in the gaps and complete.
(1)

(2)

(3) If $\alpha, \beta$ are roots of quadratic equation,

2. Find the value of discriminant.
(1) $x^{2}+7 x-1=0$
(2) $2 y^{2}-5 y+10=0$
(3) $\sqrt{2} x^{2}+4 x+2 \sqrt{2}=0$
3. Determine the nature of roots of the following quadratic equations.
(1) $x^{2}-4 x+4=0$
(2) $2 y^{2}-7 y+2=0$
(3) $m^{2}+2 m+9=0$
4. Form the quadratic equation from the roots given below.
(1) 0 and 4
(2) 3 and -10
(3) $\frac{1}{2},-\frac{1}{2}$
(4) $2-\sqrt{5}, 2+\sqrt{5}$
5. Sum of the roots of a quadratic equation is double their product. Find $k$ if equation is $x^{2}-4 k x+k+3=0$
6. $\alpha, \beta$ are roots of $y^{2}-2 y-7=0$ find,
(1) $\alpha^{2}+\beta^{2}$
(2) $\alpha^{3}+\beta^{3}$
7. The roots of each of the following quadratic equations are real and equal, find $k$.
(1) $3 y^{2}+k y+12=0$
(2) $k x(x-2)+6=0$

## Let's learn.

## Application of quadratic equation

Quadratic equations are useful in daily life for finding solutions of some practical problems. We are now going to learn the same.
Ex. (1) There is a rectangular onion storehouse in the farm of Mr. Ratnakarrao at Tivasa. The length of rectangular base is more than its breadth by 7 m and diagonal is more than length by 1 m . Find length and breadth of the storehouse.
Solution : Let breadth of the storehouse be $x \mathrm{~m}$.
$\therefore$ length $=(x+7) m$, diagonal $=x+7+1=(x+8) m$
By Pythagorus theorem

$$
\begin{aligned}
& X^{2}+(x+7)^{2}=(x+8)^{2} \\
& x^{2}+x^{2}+14 x+49=x^{2}+16 x+64
\end{aligned}
$$

$\therefore \mathrm{X}^{2}+14 \mathrm{X}-16 \mathrm{X}+49-64=0$
$\therefore \mathrm{X}^{2}-2 \mathrm{x}-15=0$
$\therefore \underline{x^{2}-5 x}+\underline{3 x-15}=0$
$\therefore x(x-5)+3(x-5)=0$
$\therefore(x-5)(x+3)=0$
$\therefore x-5=0$ or $x+3=0$
$\therefore \mathrm{x}=5$ or $\mathrm{x}=-3$
But length is never negative $\therefore \mathrm{x} \neq-3$
$\therefore x=5$ and $x+7=5+7=12$

Onion Storehouse (K andachal)
$\therefore$ Length of the base of storehouse is 12 m and breadth is 5 m .

Ex. (2) A train travels 360 km with uniform speed. The speed of the train is increased by $5 \mathrm{~km} / \mathrm{hr}$, it takes 48 minutes less to cover the same distance. Find the initial speed of the train.
Solution : Let initial speed of the train be $x \mathrm{~km} / \mathrm{hr}$.
$\therefore$ New speed is $(x+5) \mathrm{km} / \mathrm{hr}$.
time to cover $360 \mathrm{~km}=\frac{\text { distance }}{\text { speed }}=\frac{360}{x}$ hours.
New time after increasing speed $=\frac{360}{x+5}$ hours.
from given condition

$$
\begin{aligned}
& \frac{360}{x+5}=\frac{360}{x}-\frac{48}{60} \\
\therefore & \frac{360}{x}-\frac{360}{x+5}=\frac{48}{60}
\end{aligned}
$$

$\therefore \frac{1}{x}-\frac{1}{x+5}=\frac{48}{60 \times 360} \quad----$ (Dividing both sides by 360 )
$\therefore \frac{\mathrm{x}+5-\mathrm{x}}{\mathrm{x}(\mathrm{x}+5)}=\frac{4}{5 \times 360}$
$\therefore \frac{5}{x^{2}+5 \mathrm{x}}=\frac{1}{5 \times 90}$
$\therefore \frac{5}{x^{2}+5 x}=\frac{1}{450}$
$\therefore \mathrm{X}^{2}+5 \mathrm{X}=2250$
$\therefore \mathrm{X}^{2}+5 \mathrm{X}-2250=0$
$\therefore \mathrm{X}^{2}+50 \mathrm{x}-45 \mathrm{X}-2250=0$
$\therefore x(x+50)-45(x+50)=0$
$\therefore(x+50)(x-45)=0$
$\therefore \mathrm{x}+50=0$ or $\mathrm{x}-45=0$
$\therefore \mathrm{x}=-50$ or $\mathrm{x}=45$
But speed is never negative $\therefore \mathrm{x} \neq-50$
$\therefore \mathrm{x}=45$
$\therefore$ Initial speed of the train is $45 \mathrm{~km} / \mathrm{hr}$.

## Practice Set 2.6

1. Product of Pragati's age 2 years ago and 3 years hence is 84 . Find her present age.
2. Sum of squares of 2 consecutive natural even numbers is 244 ; find the numbers.
3. In the orange garden of M r. M adhusudan there are 150 orange trees. The number of trees in each row is 5 more than that in each column. Find the number of trees in each row and each column with the help of following flow chart.

4. Vivek is older than K ishor by 5 years. The sum of the reciprocals of their ages is $\frac{1}{6}$. Find their present ages.
5. Suyash scored 10 marks more in second test than that in the first. 5 times the score of the second test is the same as square of the score in the first test. Find his score in the first test. $x=7 x+10 \quad 5(x+10)=x^{2}$
6. Mr. K asam runs a small business of making earthen pots. He makes certain number of pots on daily basis. Production cost of each pot is ₹ 40 more than 10 times total number of pots, he makes in one day. If production cost of all pots per day is ₹ 600 , find production cost of one pot and number of pots he makes per day.
7. Pratik takes 8 hours to travel 36 km downstream and return to the same spot. The speed of boat in still water is 12 km . per hour. Find the speed of water current.
8. Pintu takes 6 days more than those of N ishu to complete certain work. If they work together they finish it in 4 days. How many days would it take to complete the work if they work alone.
9. If 460 is divided by a natural number, quotient is 6 more than five times the divisor and remainder is 1 . Find quotient and diviser.
10. 

In the adjoining fig. $\square A B C D$ is a trapezium $A B \| C D$ and its area is $33 \mathrm{~cm}^{2}$. From the information given in the figure find the lengths of all sides of the $\square A B C D$. Fill in the empty boxes to get the solution.

Solution: $\square A B C D$ is a trapezium.

$$
\begin{aligned}
& \quad \mathrm{AB} \| \mathrm{CD} \\
& \mathrm{~A}(\square \mathrm{ABCD})=\frac{1}{2}(\mathrm{AB}+\mathrm{CD}) \times \square \\
& 33=\frac{1}{2}(\mathrm{X}+2 \mathrm{X}+1) \times \square \\
& \therefore \quad \square=(3 \mathrm{X}+1) \times \square \\
& \therefore 3 \mathrm{X}^{2}+\square-\square=0
\end{aligned}
$$

$\therefore 3 X(\ldots)+10(\ldots)=0$
$\therefore(3 X+10)(----)=0$
$\therefore(3 X+10)=0$ or $\quad \square=0$
$\therefore \mathrm{X}=-\frac{10}{3}$ or $\mathrm{X}=\square$
But length is never negative.
$\therefore \mathrm{X} \neq-\frac{10}{3} \quad \therefore \mathrm{X}=\square$
$\mathrm{AB}=---, \mathrm{CD}=---, \mathrm{AD}=\mathrm{BC}=---$

## Problem Set - 2

1. Choose the correct answers for the following questions.
(1) Which one is the quadratic equation? $x^{2}+5 x=2 \therefore x^{2}+5 x-2=0$
$x^{(A)} \frac{5}{8}-3=x^{3}$
(B) $\times(\underline{x}+5)=2$
(C) $n^{\prime}-1=2 n^{\prime}$
(D) $\frac{1}{x^{2}}(x+2)=x x x^{2}=x^{3}$
22) Out of the following equations which one is not a quadratic equation?
(A) $x^{2}+4 x=11+x^{2}$
(B) $x^{2}=4 x$
(C) $5 x^{2}=90$
(D) $2 x-x^{2}=x^{2}+5$
(3) The roots of $x^{2}+k x+k=0$ are real and equal, find $k$. $x^{2}+4 x-11-x^{2}=0$
HD 1 (A) 0
(B) 4
(C) 0 or 4
(D) 2
(4) For $\sqrt{2} x^{2}-5 x+\sqrt{2}=0$ find the value of the discriminant.

N.
(A) -5
(B) 17
(C) $\sqrt{2}$
(D) $2 \sqrt{2}-5$
$D=b^{2}-4 a c$
(5) Which of the following quadratic equations has roots 3,5 ?
(A) $x^{2}-15 x+8=0$
(B) $x^{2}-8 x+15=0$
(C) $x^{2}+3 x+5=0$
(D) $x^{2}+8 x-15=0$
(6) Out of the following equations, find the equation having the sum of its roots -5.
(A) $3 x^{2}-15 x+3=0$
(B) $x^{2}-5 x+3=0$
(C) $x^{2}+3 x-5=0$
(D) $3 x^{2}+15 x+3=0$
(7) $\sqrt{5} m^{2}-\sqrt{5} m+\sqrt{5}=0$ which of the following statement is true for this given equation?
(A) Real and uneual roots
(B) Real and equal roots
(C) Roots are not real
(D) Three roots.
(8) One of the roots of equation $x^{2}+m x-5=0$ is 2 ; find $m$.
(A) -2
(B) $-\frac{1}{2}$
(C) $\frac{1}{2}$
(D) 2
2. Which of the following equations is quadratic ?
(1) $x^{2}+2 x+11=0$
(2) $x^{2}-2 x+5=x^{2}$
(3) $(x+2)^{2}=2 x^{2}$
3. Find the value of discriminant for each of the following equations.
(1) $2 y^{2}-y+2=0$
(2) $5 m^{2}-m=0$
(3) $\sqrt{5} x^{2}-x-\sqrt{5}=0$
4. One of the roots of quadratic equation $2 x^{2}+k x-2=0$ is -2 , find $k$.
5. Two roots of quadratic equations are given ; frame the equation.
(1) 10 and -10
(2) $1-3 \sqrt{5}$ and $1+3 \sqrt{5}$
(3) 0 and 7
6. Determine the nature of roots for each of the quadratic equation.
(1) $3 x^{2}-5 x+7=0$
(2) $\sqrt{3} x^{2}+\sqrt{2} x-2 \sqrt{3}=0$
(3) $m^{2}-2 m+1=0$
7. Solve the following quadratic equations.
(1) $\frac{1}{x+5}=\frac{1}{x^{2}}$
(2) $x^{2}-\frac{3 x}{10}-\frac{1}{10}=0$
(3) $(2 x+3)^{2}=25$
(4) $m^{2}+5 m+5=0$
(5) $5 m^{2}+2 m+1=0$
(6) $x^{2}-4 x-3=0$
8.* Find $m$ if $(m-12) x^{2}+2(m-12) x+2=0$ has real and equal roots.
9.* The sum of two roots of a quadratic equation is 5 and sum of their cubes is 35 , find the equation.
8. Find quadratic equation such that its roots are square of sum of the roots and square of difference of the roots of equation $2 x^{2}+2(p+q) x+p^{2}+q^{2}=0$
9. M ukund possesses ₹ 50 more than what Sagar possesses. The product of the amount they have is 15,000 . Find the amount each one has.
10. The difference between squares of two numbers is 120 . The square of smaller number is twice the greater number. Find the numbers.
11. Ranjana wants to distribute 540 oranges among some students. If 30 students were more each would get 3 oranges less. Find the number of students.
12. M r. Dinesh owns an agricultural farm at village Talvel. The length of the farm is 10 meter more than twice the breadth. In order to harvest rain water, he dug a square shaped pond inside the farm. The side of pond is $\frac{1}{3}$ of the breadth of the farm. The area of the farm is 20 times the area of the pond. Find the length and breadth of the farm and of the pond
13. A tank fills completely in 2 hours if both the taps are open. If only one of the taps is open at the given time, the smaller tap takes 3 hours more than the larger one to fill the tank. How much time does each tap take to fill the tank completely ?

## 3 Arithmetic Progression

## Let's learn.

## Sequence

We write numbers $1,2,3,4, \ldots$ in an order. In this order we can tell the position of any number. For example, number 13 is at $13^{\text {th }}$ position. The numbers(1), $4_{2} 9216$, $\breve{25}, \breve{36}, \breve{49}, \ldots$ are also written in a particular order. Here $16=4^{2}$ is at $4^{\text {th }}$ position. similarly, $25=5^{2}$ is at the $5^{\text {th }}$ position; $49=7^{2}$ is at the $7^{\text {th }}$ position. In this set of numbers also, place of each number is detremined.

A set of numbers where the numbers are arranged in a definite order, like the natural numbers, is called a sequence.

In a sequence a particular number is written at a particular position. If the numbers are written as $a_{1}, a_{2}, a_{3}, a_{4} \ldots$ then $a_{1}$ is first, $a_{2}$ is second, ... and so on. It is clear that $a_{n}$ is at the $n^{\text {th }}$ place. A sequence of the numbers is also represented by alphabets $f_{1}, f_{2}, f_{3}, \ldots$ and we find that there is a definite order in which numbers are arranged.

When students stand in a row for drill on the playground they form a sequence. We have experienced that some sequences have a particular pattern.

Complete the given pattern

| Pattern | 〇 | QO | QOO | 800 |  |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| N umber <br> of circles | 1 | 3 | 5 | 7 | 9 | 11 | 13 | 15 | 17 |

| Pattern | $\frac{\Delta \Delta}{\Delta \Delta}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of triangles | $5+3$ | $8+3$ | $=11+3=$ | 14 | 17 | 20 | 23 |

Look at the patterns of the numbers. Try to find a rule to obtain the next number from its preceding number. This helps us to write all the next numbers.

See the numbers $2,11,-6,0,5,-37,8,2,61$ written in this order.
Here $a_{1}=2, a_{2}=11, a_{3}=-6, \ldots$ This list of numbers is also a sequence. But in this case we cannot tell why a particular term is at a particular position ; similarly we cannot tell a definite relation between the consecutive terms.

In general, only those sequences are studied where there is a rule which determines the next term.

For example (1) $4,8,12,16 \ldots$ (2) $2,4,8,16,32, \ldots$
(3) $\frac{1}{5}, \frac{1}{10}, \frac{1}{15}, \frac{1}{20} \ldots$

## Terms in a sequence

In a sequence, ordered terms are represented $a s t_{1}, t_{2}, t_{3}, \ldots . t_{n} \ldots$ In general sequence is written as $\left\{t_{n}\right\}$. If the sequence is infinite, for every positive integer $n$, there is a term $\mathrm{t}_{\mathrm{n}}$.
Activity I: Some sequences are given below. Show the positions of the terms
by $\mathrm{t}_{1}, \mathrm{t}_{2}, \mathrm{t}_{3}, \ldots$
(1) $9,15,21,27, \ldots$

Here $t_{1}=9, \quad t_{2}=15, \quad t_{3}=21, \ldots$
(2) $7,7,7,7, \ldots$

Here $t_{1}=7, \quad t_{2}=7, \quad t_{3}=7, \ldots$
(3) $-2,-6,-10,-14, \ldots \quad$ Here $t_{1}=-2, \quad t_{2}=-6, \quad t_{3}=-10, \ldots$

Activity II: Some sequences are given below. Check whether there is any rule among the terms. Find the similarity between two sequences.

To check the rule for the terms of the sequence look at the arrangements on the next page, and fill the empty boxes suitably.
(1) $1,4,7,10,13, \ldots$
(2) $6,12,18,24, \ldots$
(3) $3,3,3,3, \ldots$
(4) $4,16,64, \ldots$
(5) $-1,-1.5,-2,-2.5$,
(6) $1^{3}, 2^{3}, 3^{3}, 4^{3}, \ldots$

Let's find the relation in these sequences. Let's understand the thought behind it.
(1)

(2)

(3)

(4) 4

(6) $1^{3}, \quad 2^{3}, \quad 3^{3}, \ldots$

Here in the sequences (1), (2), (3), (5), the similarity is that next term is obtained by adding a particular number to the previous number. Each ot these sequences is called an A rithmetic Progression.

Sequence (4) is not an arithmetic progression. In this sequence the next term is obtained by mutliplying the previous term by a particular number. This type of sequences is called a Geometric Progression.

Sequence (6) is neither arithmetic progression nor geometric progression. $x$
This year we are going to study arithmetic progression.

## Arithmetic Progression

Some sequences are given below. For every sequence write the next three terms.
(1) $100 \overrightarrow{0} 70,40,10$,
(2) $-7,-4,-1,2, \ldots$
(3) $4,4,4, \ldots$

In the given sequences, observe how the next term is obtained.
(2) -7

$-7+3 \quad-4+3$

$-1+3$

$2+3$

5+3
(3) 4

In each sequence above, every term is obtained by adding a particular number in the previous term. The difference between two consecutive terms is constant.

The diference in ex. (i) is negative, in ex. (ii) it is positive and in ex. (iii) it is zero. If the difference between two consecutive terms is constant then it is called the common difference and is generally denoted by letter d .

In the given sequence if the difference between two consecutive terms $\left(t_{n+1}-t_{n}\right)$ is constant then the sequence is called A rithmetic Progression (A.P.). In this sequence $t_{n+1}-t_{n}=d$ is the common difference.
In an A.P. if first term is denoted by a and common difference iod then,
$\mathrm{t}_{1}=\mathrm{a}, \mathrm{t}_{2}=\mathrm{a}+\mathrm{d}$
$d=1$
$1,2,3$
$2-1=1$
$t_{3}=(a+d)+d=a+2 d$
$\overline{\bar{A}} . P$. having first term as a and common difference $d$ is

$$
a,(a+d),(a+2 d),(a+3 d), \ldots .
$$

Let's see some examples of A.P.
Ex.(1) A rifa saved ₹ 100 every month. In one year the total amount saved after every month is as given below.

| M onth | I | II | III | IV | V | VI | VII | VIII | IX | X | XI | XII |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Saving (') | $100 \rightarrow 200$ | $-300 \rightarrow 400$ | 500 | 600 | 700 | 800 | 900 | 1000 | 1100 | 1200 |  |  |

The numbers showing the total saving after every month are in A.P. ( + )

Ex. (2) Pranav borrowed ₹ 10000 from his friend and agreed to repay ₹ 1000 per month. So the remaining amount to be paid in every month will be as follows.

Ex. (3) Consider the table of 5 , that is numbers divisible by 5.
$5,10,15,20,2{ }^{3} 50,55,60,65, x^{\circ}$. is an infinite A.P.
Ex (1) and (2) are finite A.P. while (3) is an infinite A.P.

## Let's remember!

(1) In a sequence if difference $\left(\mathrm{t}_{\mathrm{n}+1}-\mathrm{t}_{\mathrm{n}}\right)$ is constant then the sequence is called an arithmetic progression.
(2) In an A.P. the difference between two consecutive terms is constant and is denoted by d .
(3) Difference $d$ can be positive, negative or zero.
(4) In an A.P. if the first term is a, and common difference is $d$ then the terms in the sequence are $a,(a+d),(a+2 d), \ldots$

Activity: W rite one example of finite and infinite A.P. each.

## $\mathscr{S} \mathscr{S} \mathscr{S}$ Solved examples $\mathscr{S} \mathscr{S} \mathscr{S}$

Ex. (1) Which of the following sequences are A.P ? If it is an A .P, find next two terms.
(i) $5,12,19,26$,
(ii) $2,-2,-6,-10, \ldots$
(iii) $1,1,2,2,3,3, \ldots$
(iv) $\frac{3}{2}, \frac{1}{2},-\frac{1}{2}, \ldots$

Solution: (i) In this sequence $5,12,19,26, \ldots$,

$$
\begin{array}{lll}
\text { First term }=t_{1}=5, & t_{2}=12, & t_{3}=19, \ldots \\
d=\begin{array}{lll}
t_{2}-t_{1}=12-5=7 \\
t_{3}-t_{2}=19-12=7 & \frac{d=7}{a=5} & 5,12,19
\end{array} \quad 6,33,40
\end{array}
$$

Here first term is 5 and common difference which is constant is $\mathrm{d}=7$
$\therefore$ This sequence is an A.P.
Next two terms in this A.P. are $2 \underline{26+7=33}$ and $3 \underline{\underline{3}+7=40 .}$
Next two terms in given A.P. are 33 and 40
(ii) In the sequence 2, $-2,-6,-10, \ldots$,

$$
\begin{aligned}
& t_{1}=2, \quad t_{2}=-2, t_{3}=-6, \quad t_{4}=-10 \ldots \\
& t_{2}-t_{1}=-2-2=-4 \\
& t_{3}-t_{2}=-6-(-2)=-6+2=-4 \\
& t_{4}-t_{3}=-10-(-6)=-10+6=-4
\end{aligned}
$$

From this difference between two consecutive terms that is $t_{n}-t_{n-1}=-4$
$\therefore \mathrm{d}=-4$, which is constant. $\quad \therefore$ It is an A.P.
Next two terms in this A.P. are $(-10)+(-4)=-14$ and $(-14)+(-4)=-18$
(iii) In the sequence $1,1,2,2,3,3, \ldots$,

$$
\begin{aligned}
& t_{1}=1, t_{2}=1, \quad t_{3}=2, \quad t_{4}=2, \quad t_{5}=3, \quad t_{6}=3 \ldots \\
& t_{2}-t_{1}=1-1=0 \quad t_{3}-t_{2}=2-1=1 \\
& t_{4}-t_{3}=2-2=0 \quad t_{3}-t_{2} \neq t_{2}-t_{1}
\end{aligned}
$$

In this sequence difference between two consecutive terms is not constant.
$\therefore$ This sequence is not an A.P.
(iv) In the sequence $\frac{3}{2}, \frac{1}{2},-\frac{1}{2},-\frac{3}{2}, \ldots$,

$$
\begin{aligned}
& t_{1}=\frac{3}{2}, \quad t_{2}=\frac{1}{2}, t_{3}=-\frac{1}{2}, \quad t_{4}=-\frac{3}{2} \cdots \\
& t_{2}-t_{1}=\frac{1}{2}-\frac{3}{2}=-\frac{2}{2}=-1 \\
& t_{3}-t_{2}=-\frac{1}{2}-\frac{1}{2}=-\frac{2}{2}=-1 \\
& t_{4}-t_{3}=-\frac{3}{2}-\left(-\frac{1}{2}\right)=-\frac{3}{2}+\frac{1}{2}=-\frac{2}{2}=-1
\end{aligned}
$$

Here the common difference $\mathrm{d}=-1$ which is constant.
$\therefore$ Given sequence is an A.P. Let's find next two terms of this A.P.
$-\frac{3}{2}-1=-\frac{5}{2}, \quad \frac{5}{2}-1=-\frac{7}{2}$
$\therefore$ Next two terms are $-\frac{5}{2}$ and $-\frac{7}{2}$

Ex. (2) The first term a and common difference $d$ are given. Find first four terms of A.P.
(i) $a=-3, d=4$
(ii) $a=200, d=7$
(iii) $a=-1, d=-\frac{1}{2}$
(iv) $a=8, d=-5$

Solution : (i) Given $a=-3, d=4$

$$
t_{1}=-3
$$

$$
\begin{aligned}
& \mathrm{t}_{2}=\mathrm{t}_{1}+\mathrm{d}=-3+4=1 \\
& \mathrm{t}_{3}=\mathrm{t}_{2}+\mathrm{d}=1+4=5 \\
& \mathrm{t}_{4}=\mathrm{t}_{3}+\mathrm{d}=5+4=9 \\
& \therefore \text { A.P. is }=-3,1,5,9, \ldots
\end{aligned}
$$

(iii) $a=-1, d=-\frac{1}{2}$

$$
a=t_{1}=-1
$$

$$
\mathrm{t}_{2}=\mathrm{t}_{1}+\mathrm{d}=-1+\left(-\frac{1}{2}\right)=-\frac{3}{2}
$$

$$
t_{3}=t_{2}+d=-\frac{3}{2}+\left(-\frac{1}{2}\right)=-\frac{4}{2}=-2
$$

$$
t_{4}=t_{3}+d=-2+\left(-\frac{1}{2}\right)
$$

$$
=-2-\frac{1}{2}=-\frac{5}{2}
$$

$\therefore$ A.P. is $=-1,-\frac{3}{2},-2,-\frac{5}{2}, \ldots$
(ii) Given $a=200, d=7$
$a=t_{1}=200$
$\mathrm{t}_{2}=\mathrm{t}_{1}+\mathrm{d}=200+7=207$
$\mathrm{t}_{3}=\mathrm{t}_{2}+\mathrm{d}=207+7=214$
$t_{4}=t_{3}+d=214+7=221$
$\therefore$ A.P. is $=200,207,214,221, \ldots$
(iv) $a=8, d=-5$
$a=t_{1}=8$
$\mathrm{t}_{2}=\mathrm{t}_{1}+\mathrm{d}=8+(-5)=3$
$\mathrm{t}_{3}=\mathrm{t}_{2}+\mathrm{d}=3+(-5)=-2$
$t_{4}=t_{3}+d=-2+(-5)=-7$
$8,3,-2,-7, \ldots$
$\therefore$ A.P. is $=8,3,-2,-7, \ldots$

## Practice Set 3.1

1. Which of the following sequences are A.P. ? If they are A.P. find the common difference. $d$ $2.5 \quad 2.3$
(1) $2,4,6,8, \ldots 2$
$(2) 2^{2}, \frac{8}{7}, 3,3, \frac{2}{3}, \ldots \times(3)-1+4,-6,-2,2, \ldots d=4$
(4) $0.3,0.33,0.0333, \ldots$
(5) $0,-4,-8,-12, \ldots$ (6) $-\frac{1}{5},-\frac{1}{5},-\frac{1}{5}, \ldots$
(7) $3,3+\sqrt{2}, 3+2 \sqrt{2}, 3+3 \sqrt{2}, \ldots$
(8) $127,132,137, \ldots$
2. Write an A.P. whose first term is a and common difference is $d$ in each of the following.
(1) $a=10, d=5$
(2) $a=-3, d=0$
(3) $a=-7, d=\frac{1}{2}$
(4) $a=-1.25, d=3$
HDD) $a=6, d=-3$
(6) $a=-19, d=-4$

3. Find the first term and common difference for each of the A.P. add
(1) $5,1,-3,-7, \ldots 1-5=-4$
(2) $0.6,0.9,1.2,1.5, \ldots$

## (3) $127,135,143,151, \ldots$ <br> $$
\begin{aligned} d & =8 \leftarrow \leftarrow \\ & =135-127 \end{aligned}
$$

(4) $\frac{1}{4}, \frac{3}{4}, \frac{5}{4}, \frac{7}{4}, \ldots \mathrm{Hy}$

## Let's think.

- Is $5,8,11,14, \ldots$ an A.P. ? If so then what will be the $100^{\text {th }}$ term? Check whether 92 is in this A.P.? Is number 61 in this A.P.?

## Let's learn.

$\mathrm{n}^{\text {th }}$ term of an A. P. $100^{\text {th }} a, a+d, d+2 d$
In the sequence $5,8,11,14, \ldots$ the difference between two consecutive terms is 3 . Hence, this sequence is an A.P.

Here the first term is 5 . If 3 is added to 5 we get the second term 8 . Similarly to find $100^{\text {th }}$ term what should be done?
First term Second term Third term ...
Number 5,
$5+3=8$

$$
8+3=11
$$

In this way reaching unto $100^{\text {th }}$ term will be time consuming. Let's see if we can find any formula for it.

| 5 | 8 | 11 | 14 | $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | $5+1 \times 3$ | $5+2 \times 3$ | $5+3 \times 3$ | $\ldots$ | $5+(\mathrm{n}-1) \times 3$ | $5+\mathrm{n} \times 3$ | $\ldots$ |
| $1^{\text {st }}$ | $2^{\text {nd }}$ | $3^{\text {rd }^{\text {d }}}$ | $4^{\text {th }}$ | $\ldots$ | $\mathrm{n}^{\text {th }}$ | $(\mathrm{n}+1)^{\text {th }}$ | $\ldots$ |
| term | term | term | term |  | term | term |  |
| $\mathrm{t}_{1}$ | $\mathrm{t}_{2}$ | $\mathrm{t}_{3}$ | $\mathrm{t}_{4}$ |  | $\mathrm{t}_{\mathrm{n}}$ | $\mathrm{t}_{\mathrm{n}+1}$ |  |

Generally in the A.P. $\mathrm{t}_{1}, \mathrm{t}_{2}, \mathrm{t}_{3}, \ldots$ If first term is a and common difference is d ,

$$
\begin{aligned}
& t_{1}=a \\
& t_{2}=t_{1}+d=a+d=a+(2-1) d \\
& t_{3}=t_{2}+d=a+d+d=a+2 d=a+(3-1) d \\
& t_{4}=t_{3}+d=a+2 d+d=a+3 d=a+(4-1) d
\end{aligned}
$$

We get

U sing the above formula we can find the $100^{\text {th }}$ term of the A.P. $5,8,11,14, \ldots$ Here $=5 d=3$

$$
\begin{aligned}
t_{n} & =a+(n-1) d \\
\therefore \quad t_{100} & =5+(100-1) \times 3 \\
& =5+99 \times 3 \\
& =5+297 \\
t_{100} & =302
\end{aligned}
$$

$100^{\text {th }}$ term of this A.P. is 302 .
Let's check whether 61 is in this A.P. To find the answer we use the same formula.

If 61 is $\mathrm{n}^{\text {th }}$ term means t , then

$\uparrow$
19

$\therefore 61=5+3 n-3$

$$
6 \backslash=3 n+2 \quad: 3 n=61-2
$$

$\therefore 3 n=59$
$\therefore \mathrm{n}=\frac{59}{3}$

But then, n is not a natural number.
$\therefore 61$ is not in this A.P.

## Let's think.

K abr's mother keeps a record of his height on each birthday. W hen he was one year old, his height was 70 cm , at 2 years he was 80 cm tall and 3 years he was 90 cm tall. His aunt M eera was studying in the $10^{\text {th }}$ class. She said, "it seems like K abir's height grows in A rithmetic Progression". A spuming this, she calculated how tall Kabir will be at the age of 15 years when he is in the $10^{\text {th }}$ ! She was shocked to find it. You too assume that Kabir grows in A.P. and find out his height at the age of 15 years.

## © S\&S solved examples \&\&S

Ex. (1) Find $\mathrm{t}_{\mathrm{n}}$ for following A.P. and then Ex. (2) Which term of the following A.P. find $30^{\text {th }}$ term of A.P. $3,8,13,18, \ldots$
Solution :Given A.P. 3, 8, 13, 18, ...
Were $t_{1}=\underline{3}, t_{2}=8, t_{3}=13, t_{4}=18$, $d=t_{2}-t_{1}=\underline{8}-\underline{3}=5 \mathrm{~V}$
We know that $\mathrm{t}_{\mathrm{n}}=\mathrm{a}+(\mathrm{n}-1) \mathrm{d}$

$$
\begin{aligned}
& \therefore \mathrm{t}_{\mathrm{n}}=3+(n-1) x=\frac{5}{2} \because \frac{d=5}{n=30} \\
& \therefore \mathrm{t}_{\mathrm{n}}=3+5 n-5
\end{aligned}
$$

$\therefore \mathrm{t}_{\mathrm{n}}=5 \mathrm{n}$
$\therefore 30^{\text {th }}$ term $=\mathrm{t}_{30}=5 \underline{\times 30}-2$

$$
=150-2=148
$$

Ex. (3) Check whether 301 is in the sequence 5, 11, 17, 23, ...?
Solution: In the sequence $5,11,17,23, \ldots$

$$
\begin{aligned}
& \mathrm{t}_{1}=5, \mathrm{t}_{2}=11, \mathrm{t}_{3}=17, \mathrm{t}_{4}=23, \ldots \\
& \mathrm{t}_{2}-\mathrm{t}_{1}=11-5=6 \\
& \mathrm{t}_{3}-\mathrm{t}_{2}=17-11=6
\end{aligned}
$$

$\therefore$ This sequence is an A.P.
First term $\mathrm{a}=5$ and $\mathrm{d}=6$
If 301 is $\mathrm{n}^{\text {th }}$ term, then.
$\mathrm{t}_{\mathrm{n}}=\mathrm{a}+(\mathrm{n}-1) \mathrm{d}=301$
$\therefore 301=5+(n-1) \times 6$

$$
=5+6 n-6
$$

$\therefore 6 \mathrm{n}=301+1=302$
$\therefore \mathrm{n}=\frac{302}{6}$. But it is not an integer.
$\therefore 301$ is not in the given sequence.

Ex. (4) How many two digit numbers are divisible by 4 ?
Solution : List of two digit numbers divisible by 4 is
$12,16,20,24, \ldots, 96$.
Let's find how many such numbers are there.

$$
\mathrm{t}_{\mathrm{n}}=96, \quad \mathrm{a}=12, \quad \mathrm{~d}=4
$$

From this we will find the value of $n$.
$\mathrm{t}_{\mathrm{n}}=96, \therefore$ By formula,

$$
96=12+(n-1) \times 4
$$

$$
=12+4 n-4
$$

$\therefore 4 n=88$
$\therefore \mathrm{n}=22$
$\therefore$ There are 22 two digit numbers divisible by 4.

Ex. (5) - The $10^{\text {th }}$ term and the $18^{\text {th }}$ term of an A.P. are 25 and 41 respectively then find $38^{\text {th }}$ term of that $A . P .$, similarly if $n^{\text {th }}$ term is 99 . Find the value of $n$.
Solution : In the given A.P. $\mathrm{t}_{10}=25$ and $\mathrm{t}_{18}=41$.
We know that, $\mathrm{t}_{\mathrm{n}}=\mathrm{a}+(\mathrm{n}-1) \mathrm{d}$

$$
\begin{align*}
& \therefore \mathrm{t}_{10}=\mathrm{a}+(10-1) \mathrm{d} \\
& \therefore 25=a+9 \mathrm{~d} \ldots(\mathrm{I} \tag{I}
\end{align*}
$$

Similarly $\mathrm{t}_{18}=a+(18-1) \mathrm{d}$

$$
\begin{aligned}
& \therefore \quad 41=a+17 d \ldots \text { (II) } \\
& 25=a+9 d \ldots \text { From (I) } . \\
& a=25-9 d .
\end{aligned}
$$

Substituting this value in equation II.
$\therefore$ Equation (II) $a+17 d=41$

$$
\begin{aligned}
\therefore \quad & 25-9 d+17 d=41 \\
& 8 d=41-25=16 \\
& d=2
\end{aligned}
$$

Substituting $d=2$ in equation I.

$$
a+9 d=25
$$

$\therefore a+9 \times 2=25$
$\therefore a+18=25$
$\therefore a=7$
If $\mathrm{n}^{\text {th }}$ term is 99 , then to find value of n .

$$
\begin{aligned}
& t_{n}=a+(n-1) d \\
& 99=7+(n-1) \times 2 \\
& 99=7+2 n-2 \\
& 99=5+2 n \\
& \therefore 2 n=94 \\
& \therefore n=47
\end{aligned}
$$

$\therefore$ In the given progression $38^{\text {th }}$ term is 81 and 99 is the $47^{\text {th }}$ term.

## Practice Set 3.2

1. W rite the correct number in the given boxes from the following A. P.
(i) $1,8,15,22, \ldots$

$$
\begin{aligned}
& \text { Here } a=\square, t_{1}=1, t_{2}=8, t_{3}=15, \\
& t_{2}-t_{1}=8-\square=7 \\
& t_{3}-t_{2}=15-8=7 \therefore d=7
\end{aligned}
$$

(ii) $3,6,9,12, \ldots$

Here $\mathrm{t}_{1}=\square, \mathrm{t}_{2}=\square, \mathrm{t}_{3}=\square, \mathrm{t}_{4}=\square$,
$\mathrm{t}_{2}-\mathrm{t}_{1}=\square, \mathrm{t}_{3}-\mathrm{t}_{2}=\square \quad \therefore \mathrm{d}=\square$
(iii) $-3,-8,-13,-18, \ldots$

Here $\mathrm{t}_{3}=\square, \mathrm{t}_{2}=\square, \mathrm{t}_{4}=\square, \mathrm{t}_{1}=\square$,

$$
\mathrm{t}_{2}-\mathrm{t}_{1}=\square, \mathrm{t}_{3}-\mathrm{t}_{2}=\square \quad \therefore \mathrm{a}=\square, \mathrm{d}=\square
$$

(iv) $70,60,50,40, \ldots$

Here $\mathrm{t}_{1}=\square, \mathrm{t}_{2}=\square, \mathrm{t}_{3}=\square, \ldots$

$$
\operatorname{tn}=a+(n-1) d
$$

$$
\therefore \mathrm{a}=\square, \mathrm{d}=\square
$$

$$
=-12+(20-1) 7
$$

| progression. Yes | $d$ $=t_{2}-t_{1}$ <br> $-12,-5,2,9,16,23,30, \ldots$ $=-5-(-12)=-5+12=7$$\quad=t_{3}-t_{2}=-12+133$ |
| ---: | :--- |

3. Given Arithmetic Progression $12,16,20,24, \ldots$ Find the $24^{\text {th }}$ term of this $=2+5=7$

HH) progression. $\quad t_{n}=a+(n-1) d \quad a=12, \bar{y}=24, d=16-12=4$
4. Find the $\underline{19}^{\text {th }}$ term of the following A.P.
$7,13,19,25, \ldots \quad d=13-7=6$
Find the $27^{\text {th }}$ term of the following A.P.
$9,4,-1,-6,-11, \ldots$
L. Find how many three digit natural numbers are divisible by 5 .
7. The $11^{\text {th }}$ term and the $21^{\text {st }}$ term of an A.P. are $1 \underline{6}$ and 29 respectively, then find the $41^{\text {th }}$ term of that A.P. $\quad t_{11}=16 \quad n=11 \quad{ }_{t_{21}}=29 \quad n=21 \quad t_{41}=$ ?
8. $11,8,5,2, \ldots$ In this A.P. which term is number -151 ? $=$
9. In the natural numbers from 10 to 250 , how many are divisible by 4 ?
10. In an A.P. $17^{\text {th }}$ term is 7 more than its $10^{\text {th }}$ term. Find the common difference.

## TheWiseTeacher

Once upon a time, there lived a king. He appointed two teachers Tara and M eera to teach horse riding for one year to his children Y ashwantraje and Geetadevi. He asked both of them how much salary they wanted.

Tara sạid, "Give me 100 gold coins in first month and every month increase the amount by 100 gold coins." M eera said, "'Give me 10 gold coins in the first month and every month just double the amount of the previous month."
The king agreed. A fter three months Y ashwantraje said to his sister, " M y teacher is smarter than your teacher as she had asked for more money." Geetadevi said, "I also thought the same, I asked M eeratai about it. She only smiled and said compare the salaries after 8 months. I calculated their 9 months salaries. Y ou can also check."

| M onths | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Tara's <br> salary | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | - | - | - |
| M eera's <br> salary | 10 | 20 | 40 | 80 | 160 | 320 | 640 | 1280 | 2560 | - | - | - |

Complete the above table.
Tara's salary $100,200,300,400, \ldots$ is in A.P.

$$
\mathrm{t}_{1}=100, \quad \mathrm{t}_{2}=200, \mathrm{t}_{3}=300, \ldots \quad \mathrm{t}_{2}-\mathrm{t}_{1}=100=\mathrm{d}
$$

Common difference is 100 .
M eera's salary $10,20,40,80$, . . is not an A.P. Reason is $20-10=10,40-20=20,80-40=40$ So the common difference is not constant.

B ut here each term is double the preceding term.
Here $\frac{t_{2}}{t_{1}}=\frac{20}{10}=2, \frac{t_{3}}{t_{2}}=\frac{40}{20}=2, \frac{t_{4}}{t_{3}}=\frac{80}{40}=2$
$\therefore \frac{t_{n+1}}{t_{n}}$ The ratio of a term and its preceding term is constant. This type of progression is called a geometric progression. Notice that if ratio $\frac{t_{n+1}}{t_{n}}$ is greater than 1, then geometric progression will increase faster than arithmetic progression.

If the ratio is smaller than 1 , note how the geometric progression changes.
This year we are going to study A rithmetic Progression only. We have seen how to find the $\mathrm{n}^{\text {th }}$ term of an A.P. Now we are going to see how to find the sum of the first nterms.

## Quick Addition

Three hundred years ago there was a single teacher school in Germany. The teacher was Buttner and he had an assistant J ohann M artin B ortels. He used to teach al phabets to the children and sharpen their pencils. Buttner was a strict teacher. One day he wanted to do some work and wanted peace in the class, so he tried to occupy all students with a lengthy addition. They were asked to add all intergers from 1 to 100. In few minutes one slate was slammed on the floor. He looked at Carl Gauss and asked, "I asked you to add all integers from 1 to 100 . Why did you keep the slate down? Don't you want to do it ?"
Carl Gauss said, "I have done the addition."
The teacher asked, "How did you do it so quickly? You wouldn't have written all the numbers ! W hat is the answer ?"
Carl Gauss said, "Five thousand fifty"
Teacher was so surprised and asked him, 'How do you find the answer?"
Carl Gauss explained his quick addition method:
Nos. in increasing order
Nos. in decreasing order
Sum

$\begin{array}{llll}101 & 101 & 101 & 101\end{array}$ 101
The sum of each pair is 101 . This sum occurs 100 times so $101 \times 100$ is the product needed. It is 10100. In this 1 to 100 are counted two times. Therefore, half of 10100 is 5050 and sum of 1 to 100 is 5050 . The teacher appreciated his work.

Now using this method of Gauss, let's find sum of $n$ terms of an A.P.

## J ohann Friedrich Carl Gauss

$30^{\text {th }}$ A pril $1777-23^{\text {rd }}$ February 1855.
Carl Gauss was a great German mathematician, He was born in Braunschweig, he was the only son of uneducated parents. He showed a glimpse of his intelligence in Buttner's school. A fter some years, Buttner's helper, Johann Martin Bartels and Gauss became friends. Together, they published a book on A Igebra. B artels made the other people realise the extra
 ordinary intelligence of Gauss.

## Sum of first $\mathbf{n}$ terms of an A. P.

Arithmetic Progression $a, a+d, a+2 d, a+3 d, \ldots a+(n-1) d$
In this progression a is the first term and d is the common difference. Let's write the sum of first $n$ terms as $S_{n}$.
$S_{n}=[a] \quad+[a+d]+\ldots+[a+(n-2) d]+[a+(n-1) d]$
Reversing the terms and rewritting the expression again,
$S_{n}=[a+(n-1) d]+[a+(n-2) d] \quad+\ldots+[a+d]+[a]$
On adding,
$2 S_{n}=[a+a+(n-1) d]+[a+d+a+(n-2) d]+\ldots+[a+(n-2) d+a+d]+[a+(n-1) d+a]$
$2 S_{n}=[2 a+(n-1) d]+[2 a+(n-1) d]+\ldots+[2 a+(n-1) d] \ldots n$ times.
$\therefore 2 S_{n}=n[2 a+(n-1) d]$
$\therefore S_{n}=\frac{n}{2}[2 a+(n-1) d] \quad$ or $\quad S_{n}=n a+\frac{n(n-1)}{2} d$
Ex. Let's find the sum of first 100 terms of A.P 14) $16,18 \ldots \ldots$
$\rightarrow$ Here $a=14, \quad \frac{d=2, e^{16}-14}{n} n=100$
— $S_{n}=\frac{n}{2}[2 a+(n-1) d] \ldots$ formula

$$
\begin{aligned}
\therefore \mathrm{S}_{100} & =\frac{100}{2}[2 \times 14+(100-1) \times 2] \\
& =50[28+198] \\
& =50 \times 226=11300
\end{aligned}
$$

$\therefore$ Sum of first 100 terms of given A.P. is 11,300

## Let's remember!

For the given A rithmetic Progression, if first term is a and common difference is $d$ then

$$
\begin{gathered}
t_{n}=[a+(n-1) d] \\
S_{n}=\frac{n}{2}[2 a+(n-1) d]=n a+\frac{n(n-1)}{2} d
\end{gathered}
$$

Let's find one more formula for sum of first $n$ terms.
In the A.P. $a, a+d, a+2 d, a+3 d, \ldots a+(n-1) d$
First term $=\mathrm{t}_{1}=\mathrm{a}$ and $\mathrm{n}^{\text {th }}$ term is $[\mathrm{a}+(\mathrm{n}-1) \mathrm{d}]$
Now $S_{n}=\frac{n}{2}[\underline{a}+\underline{a}+(n-1) d]$
$\therefore \quad S_{n}=\frac{n}{2}\left[t_{1}+t_{n}\right]=\frac{n}{2}$ [First term+ last term]
© $8 \mathbb{S}$ Solved examples $\mathscr{S}$ \&
Ex. (1) Find the sum of first $n$ natural numbers.
Solution : First n natural numbers are $1,2,3, \ldots, \mathrm{n}$.
Here $a=1, d=1, n^{\text {th }}$ term $=n$

$$
\begin{aligned}
\therefore S_{n} & =1+2+3+\ldots+n \\
S_{n} & =\frac{n}{2}[\text { First term }+ \text { last term }] \ldots . . \text { (by the formula) } \\
& =\frac{n}{2}[1+n] \\
& =\frac{n(n+1)}{2}
\end{aligned}
$$

$\therefore$ Sum of first n natural number is $\frac{\mathrm{n}(\mathrm{n}+1)}{2}$.
Ex. (2) Find the sum of first $n$ even natural numbers.
Solution : First $n$ even natural numbers are $2,4,6,8, \ldots, 2 n$.

$$
\mathrm{t}_{1}=\text { First term }=2, \mathrm{t}_{\mathrm{n}}=\text { last term }=2 \mathrm{n}
$$

## Method I

$$
\begin{aligned}
& =\frac{n}{2}\left[t_{1}+t_{n}\right] \\
& =\frac{n}{2}[2+2 n] \\
& =\frac{n}{2} \times 2(1+n) \\
& =n(1+n)
\end{aligned}
$$

## Method II

$$
\begin{aligned}
S_{n} & =2+4+6 \ldots+2 n \\
& =2(1+2+3+\ldots+n) \\
& =\frac{2[n(n+1)]}{2} \\
& =n(1+n)
\end{aligned}
$$

Method III

$$
\begin{aligned}
S_{n} & =\frac{n}{2}[2 a+(n-1) d] \\
& =\frac{n}{2}[2 \times 2+(n-1) 2] \\
& =\frac{n}{2}[4+2 n-2] \\
& =\frac{n}{2}[2+2 n] \\
& =\frac{n}{2} \times 2(1+n) \\
& =n(1+n)
\end{aligned}
$$

$\therefore$ Sum of first $n$ even natural numbers is $n(1+n)$.

Ex. (3) Find the sum of first n odd natural numbers.
Solution : First n natural numbers

$$
\begin{aligned}
& 1,3,5,7, \ldots,(2 n-1) \\
& a=t_{1}=1 \text { and } t_{n}=(2 n-1), d=2
\end{aligned}
$$

## Method I

$$
\begin{aligned}
S_{n} & =\frac{n}{2}\left[t_{1}+t_{n}\right] \\
& =\frac{n}{2}[1+(2 n-1)] \\
& =\frac{n}{2}[1+2 n-1] \\
& =\frac{n}{2} \times 2 n \\
& =n^{2}
\end{aligned}
$$

## Method II

$S_{n}=\frac{n}{2}[2 a+(n-1) d]$
$=\frac{n}{2}[2 \times 1+(n-1) \times 2]$
$=\frac{n}{2}[2+2 n-2]$
$=\frac{n}{2} \times 2 n$
$=\mathrm{n}^{2}$

## Method III

$$
\begin{aligned}
& 1+3+\ldots 2 n-1 \\
&=(1+2+3+\ldots+2 n) \\
&-(2+4+6+\ldots+2 n) \\
&= \frac{2 n(2 n+1)}{2}-\frac{2 n(n+1)}{2} \\
&=\left(2 n^{2}+n\right)-\left(n^{2}+n\right) \\
&= n^{2}
\end{aligned}
$$

Ex. (4) Find the sum of all odd numbers from 1 to 150.
Solution : 1 to 150 all odd numbers are 1, 3, 5, 7, . . , 149 .
Which is an A.P.
Here $a=1$ and $d=2$. First let's find how many odd numbers are there from 1 to 150 , so find the value of $n$, if $t_{n}=149$

$$
\begin{array}{ll}
t_{n}=a+(n-1) d & \\
149=1+(n-1) 2 & \therefore 149=1+2 n-2 \\
& \therefore n=75
\end{array}
$$

N ow let's find the sum of these 75 numbers

$$
1+3+5+\ldots+149
$$

$a=1$ and $d=2, n=75$

Method I $\quad S_{n}=\frac{n}{2}[2 a+(n-1) d]$

$$
\begin{aligned}
& \mathrm{S}_{\mathrm{n}}=\square \\
& \mathrm{S}_{\mathrm{n}}=\square \times \square \\
& \mathrm{S}_{\mathrm{n}}=\square
\end{aligned}
$$

Method II $S_{n}=\frac{n}{2}\left[t_{1}+t_{n}\right]$

$$
\begin{aligned}
& \mathrm{S}_{\mathrm{n}}=\frac{75}{2}[1+149] \\
& \mathrm{S}_{\mathrm{n}}=\square \times \square \\
& \mathrm{S}_{\mathrm{n}}=\square
\end{aligned}
$$

1. First term and common difference of an A.P. are 6 and 3 respectively ; find $S_{27}$.

$$
\begin{aligned}
\rightarrow \quad \frac{a}{} & =6, d=3, S_{27}=? \quad n=27 \\
S_{n} & =\frac{n}{2}[\square+(n-1) d] \\
S_{27} & =\frac{27}{2}\left[\frac{12}{4}+(27-1)(3)=\frac{27}{2}[12+78]\right. \\
& =\frac{27}{2} \times 50 \\
& =27 \times 45=\square 1295
\end{aligned}
$$

2. Find the sum of first 123 even natural numbers.

Ht ${ }^{3}$. Find the sum of all even numbers between 1 and 350 .

$$
2 \cdots 5 \leftarrow_{350}
$$

4. In an A.P. $19^{\text {th }}$ term is 52 and $38^{\text {th }}$ term is 128 , find sum of first 56 terms.
5. Complete the following activity to find the sum of natural numbers betw een 1 and 140 H(D) which are divisible by 4 .

Between 1 and 140, natural numbers divisible by 4

$$
136=4+4 n-14
$$

$$
\begin{array}{r}
136=4+(n-1) \times 4 \\
n=34
\end{array}
$$

$$
\therefore 4 n=136
$$

$$
\begin{aligned}
& 4 n=136 \\
& \therefore n=\frac{3}{46}=34 \\
& 1) d]
\end{aligned}
$$

$$
\left.S_{34}=34[2 \times 4+(34-1) 4]\right]^{-}=17[8+33 \times 4]
$$

Sum of numbers from 1 to 140 , which are divisible by $4=$ $\qquad$ $=17[8+132]$ $=17[140]$

$$
=2380
$$

6. ${ }^{\star}$ Sum of first 55 terms in an A.P. is 3300 , find its $28^{\text {th }}$ term.
Y. 7. In In A.P. sum of threeconsecutivetermsis 27 and their productis 504 , find the terms. (A spume that three consecutive terms in A.P. are $a-d, a, a+d$. .)
7. Find four consecutive terms in an A.P. whose sum is 12 and sum of $3^{\text {rd }}$ and $4^{\text {th }}$ term is 14.
(A spume the four consecutive terms in A.P. are $a-d, a, a+d, a+2 d$. )
8. If the $9^{\text {th }}$ term of an A.P. is zero then show that the $29^{\text {th }}$ term is twice the $19^{\text {th }}$ term.

## Let's learn.

## Application of A.P.

Ex. (1) A mixer manufacturing company manufactured 600 mixers in $3^{\text {rd }}$ year and in $\checkmark 7^{\text {th }}$ year they manufactured 700 mixers. If every year there is same growth in the production of mixers then find (i) Production in the first year (ii) Production in $10^{\text {th }}$ year (iii) Total production in first seven years.
Solution : Addition in the number of mixers manufactured by the company per year is constant therefore the number of production in successive years is in A.P. (i) Let's assume that company manufactured $\mathrm{t}_{\mathrm{n}}$ mixers in the $\mathrm{n}^{\text {th }}$ year then as per given information,
$\checkmark t_{3}=600, t_{7}=700$
We know that $t_{n}=a+(n-1) d . \checkmark$
$\checkmark t_{3}=a+(3-1) d$ $a+2 d=600 \ldots$ (I)
$\mathrm{t}_{7}=\mathrm{a}+6 \mathrm{~d}=700$
$a+2 \bar{d}=600 \therefore$ Substituting $a=600-2 d$ in equation (II), $600-2 d+6 d=700$ $4 d=100$

$4=700$
$4 d=100$
$a+2 d=600 \therefore a+2 \times 25=600$ $a+50=600 \quad \therefore a=550$
$\therefore$ Production in first year was 550 .
(ii) $t_{n}=a+(n-1) d$
$\mathrm{t}_{10}=\frac{1}{5} 50+(10-1) \times 25=550+9 \times 25$ $=550+225$
Production in $10^{\text {th }}$ year was 775 .

## $s_{1}+s_{2}+s$

(iii) For finding total production in first 7 years let's use formula for $S_{n}$.

$$
\begin{aligned}
& \text { iii) For finding total production in first } 7 \text { years let's use formula for } S_{n} \text {. } \\
& \checkmark S_{n}=\frac{n}{2}[2 a+(n-1) d]=\frac{7}{2}[2 \times 550+(7-1) \times 25]=\frac{7}{2}[1100+6 \times 25] \\
& \checkmark_{S_{n}}=\frac{7}{2}[1100+150]=\frac{7}{2}[1250]=7 \times 625=4375
\end{aligned}
$$

Total production in first' 7 years is 4375 mixers. $=550+575+600+625+$
Ex. (2) A jay sharma repays the borrowed amount of ₹ $3,25,000$ by paying ₹ 30500 in the first month and then decreases the payment by ₹ 1500 every month. How long will it take to clear his amount?

Solution : Let the time required to clear the amount ben months. The monthly payment decreases by ₹ 1500 . Therefore the payments are in A.P.

First term $=a=30500, d=-1500$

$$
\begin{aligned}
& \text { A mount }=S_{n}=3,25,000 \\
& S_{n}=\frac{n}{2}[2 a+(n-1) d] \\
& 3,25,000=\frac{n}{2}[2 \times 30500+(n-1) d] \\
& \quad=\frac{n}{2}[2 \times 30500-1500 n+1500] \\
& 3,25,000=30500 n-750 n^{2}+750 n \\
& \therefore 750 n^{2}-31250 n+325000=0
\end{aligned}
$$

divide both sides by 250 .
$\therefore 3 n^{2}-125 n+1300=0$
$\therefore 3 n^{2}-60 n-65 n+1300=0$
$\therefore 3 n(n-20)-65(n-20)=0$
$\therefore(n-20)(3 n-65)=0$
$\therefore \mathrm{n}-20=0,3 \mathrm{n}-65=0$
$\therefore \mathrm{n}=20$ or $\mathrm{n}=\frac{65}{3}=21 \frac{2}{3}$
In an A.P. n is a natural number.

$$
\therefore \mathrm{n} \neq \frac{65}{3} \quad \therefore \quad \mathrm{n}=20
$$

(Or, after 20 months, $S_{20}=3,25,000$ then the total amount will be repaid. It is not required to think about further period of time.)
$\therefore$ To clear the amount 20 months are needed.

Ex. (3) A nvar saves some amount every month. In first three months he saves ₹ 200 , ₹ 250 and ₹ 300 respectively. In which month will he save $₹ 1000$ ?

Solution: Saving in first month ₹ 200; Saving in second month ₹ 250 ; ..... 200, 250, 300, .. this is an A.P. Here $a=200, d=50$, Let's find $n$ using $t_{n}$ formula and then find $S_{n}$.

$$
\begin{aligned}
\mathrm{t}_{\mathrm{n}} & =a+(n-1) d \\
& =200+(n-1) 50 \\
& =200+50 n-50 \\
1000 & =150+50 n \\
150+50 n & =1000 \\
50 \mathrm{n} & =1000-150 \\
50 n & =850 \\
\therefore \mathrm{n} & =17
\end{aligned}
$$

In the $17^{\text {th }}$ month he will save ₹ 1000 .
Let's find that in 17 months how much total amount is saved.

$$
\begin{aligned}
S_{n} & =\frac{n}{2}[2 a+(n-1) d] \\
& =\frac{17}{2}[2 \times 200+(17-1) \times 50] \\
& =\frac{17}{2}[400+800] \\
& =\frac{17}{2}[1200] \\
& =17 \times 600 \\
& =10200
\end{aligned}
$$

In 17 months total saving is ₹ 10200 .

Ex. (4) A s shown in the figure, take point $A$ on the line and draw a half circle $P_{1}$ of
 radius 0.5 with $A$ as centre. It intersects given line in point B. Now taking B as centre draw a half circle $P_{2}$ of radius 1 cm which is on the other side of the line.
N ow again taking A as centre draw a half circle $P_{3}$ of radius 1.5 cm . If we draw half circles like this having radius $0.5 \mathrm{~cm}, 1 \mathrm{~cm}$, $1.5 \mathrm{~cm}, 2 \mathrm{~cm}$, we get a figure of spiral shape. Find the length of such spiral shaped figure formed by 13 such half circles. $\left(\pi=\frac{22}{7}\right.$ )

Solution : Semi circumferences $P_{1}, P_{2}, P_{3}, \ldots$ are drawn by taking centres $A, B, A$, $B, \ldots$ It is given that radius of the first circle is 0.5 cm . The radius of the second circle is $1.0 \mathrm{~cm}, \ldots$. From this information we will find $P_{1}, P_{2}, P_{3}, \ldots P_{3}$.
Length of the first semi circumference $=P_{1}=\pi r_{1}=\pi \times \frac{1}{2}=\frac{\pi}{2}$

$$
\begin{aligned}
& \mathrm{P}_{2}=\pi \mathrm{r}_{2}=\pi \times 1=\pi \\
& \mathrm{P}_{3}=\pi \mathrm{r}_{3}=\pi \times 1.5=\frac{3}{2} \pi
\end{aligned}
$$

The lengths are $P_{1}, P_{2}, P_{3}, \ldots$, and the numbers $\frac{1}{2} \pi, 1 \pi, \frac{3}{2} \pi, \ldots$ are in A.P. Here $\mathrm{a}=\frac{1}{2} \pi, \mathrm{~d}=\frac{1}{2} \pi$, From this let' s find $\mathrm{S}_{13}$.

$$
\begin{aligned}
S_{n} & =\frac{n}{2}[2 a+(n-1) d] \\
S_{13} & =\frac{13}{2}\left[2 \times \frac{\pi}{2}+(13-1) \times \frac{1}{2} \pi\right] \\
& =\frac{13}{2}[\pi+6 \pi] \\
& =\frac{13}{2} \times 7 \pi= \\
& =\frac{13}{2} \times 7 \times \frac{22}{7} \\
& =143 \mathrm{~cm}
\end{aligned}
$$

$\therefore$ The total length of spiral shape formed by 13 semicircles is 143 cm .

Ex. (5) In the year 2010 in the village there were 4000 people who were literate. Every year the number of literate people increases by 400 . How many people will be literate in the year 2020?
Solution :

| Y ear | 2010 | 2011 | 2012 | $\cdots$ | 2020 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Literate People | 4000 | 4400 | 4800 | $\cdots$ | $\square$ |

$$
a=4000, \quad d=400 \quad \begin{aligned}
\mathrm{n} & =11 \\
\mathrm{t}_{\mathrm{n}} & =a+(\mathrm{n}-1) \mathrm{d} \\
& =4000+(11-1) 400 \\
& =4000+4000 \\
& =8000
\end{aligned}
$$

In year 2020, 8000 people will be literate.
Ex. (6) In year 2015, M rs. Shaikh got a job with salary ₹ $1,80,000$ per year. Her employer agreed to give ₹ 10,000 per year as increment. Then in how many years will her annual salary be ₹ $2,50,000$ ?

## Solution :

| Y ear | First Y ear <br> $(2015)$ | Second Y ear <br> $(2016)$ | Third Y ear <br> $(2017)$ | $\ldots$ |
| :---: | :---: | :---: | :---: | :---: |
| Salary $(₹)$ | $[1,80,000]$ | $[1,80,000+10,000]$ |  | $\cdots$ |

$$
\begin{aligned}
& a=1,80,000 \quad d=10,000 \quad n=? \quad t_{n}=2,50,000 ₹ \\
& t_{n}=a+(n-1) d \\
& 2,50,000=1,80,000+(n-1) \times 10,000 \\
& (n-1) \times 10000=70,000 \\
& (n-1)=7 \\
& n=8
\end{aligned}
$$

In the $8^{\text {th }}$ year her annual salary will be ₹ $2,50,000$.

2. On $1^{\text {st }}$ Jan 2016, Sanika decides to save ₹ 10 , ₹ 11 on second day, ₹ 12 on third day. If she decides to save like this, then on $31^{\text {st }} \mathrm{Dec} 2016$ what would be her total saving?
2. A man borrows ₹ 8000 and agrees to repay with a total interest of $₹ 1360$ in monthly instal mints. Each instalment being less than the preceding one by ₹ 40 . Find the amount of the first and last instalment. $8000+\overline{1360}=9360, d=-40$
3. Sachin invested in a national saving certificate scheme. In the first year he invested $n=12$ ₹ 5000 , in the second year ₹ 7000 , in the third year ₹ 9000 and so on. Find the $\alpha \cdots t_{n}$ total amount that he invested in 12 years.
4. There is an auditorium with 27 rows of seats. There are 20 seats in the first row, 22 seats in the second row, 24 seats in the third row and so on. Find the number of seats in the $15^{\text {th }}$ row and also find how many total seats are there in the auditorium?
5. K argil's temperature was recorded in a week from Monday to Saturday. All readings were in A.P. The sum of temperatures of Monday and Saturday was $5^{\circ} \mathrm{C}$ more than sum of temperatures of Tuesday and Saturday. If temperature of W ednesday was $-30^{\circ}$ celsius then find the temperature on the other five days.
6. On the world environment day tree plantation programme was arranged on a land which is triangular in shape. Trees are planted such that in the first row there is one tree, in the second row there are two trees, in the third row three trees and so on. Find the total number of trees in the 25 rows.

## Problem Set - 3

1. Choose the correct alternative answer for each of the following sub questions.
(1) The sequence $-10,-6,-2,2, \ldots=-6-(-10)=-6+10=10-6=4$
(A) is an A.P., Reason $d=-16$ (B) is an A.P., Reason $d=4$
$\begin{array}{ll}\text { (C) is an A.P., Reason } d=-4 & \text { (D) is not an A.P. }\end{array}$
(2) First four terms of an A.P. are ....., whose first term is -2 and common difference is -2 .

$$
a=-2, d=-2
$$

(A) $-2,0,2,4$
(B) $-2,4,-8,16$
(e) $-2,-4,-6,-8$
(D) $\underset{=}{2},-4,-8,-16$
(3) What t is the sum of the first 30 natural numbers? 1, _ 30
(A) 464
(D) 465
(C) 462
(D) 461
(4) For an given A.P. $t_{7}=4, d=-4$ then $a=.28$
(A) 6
(B) 7
(C) 20
(D) 28
$t_{7}=a+(n-1) d$
(5) For an given A.P. $a=3.5, d=0, n=101$, then $t_{n}=\ldots 4=a \quad+(7-1) \times(-4)$
(A) 0
(B) 3.5
(C) 103.5
(D) 104.5
$4=a-24$
$4=a+(6 x-4)$
(6) In an A.P. first two terms are $-3,4$ then $21^{\text {st }}$ term is ...
(A) -143
(B) 143
(C) 137
(D) 17
(7) If for any A.P. $d=5$ then $t_{18}-t_{13}=\ldots$
(A) 5
(B) 20
(C) 25
(D) 30
(8) Sum of first five multiples of 3 is. . .
(A) 45
(B) 55
(C) 15
(D) 75
(9) $15,10,5, \ldots$ In this A.P. sum of first 10 terms is . . .
(A) -75
(B) -125
(C) 75
(D) 125
(10) In an A.P. $1^{\text {st }}$ term is 1 and the last term is 20. The sum of all terms is $=399$ then $\mathrm{n}=.$. .
(A) 42
(B) 38
(C) 21
(D) 19
2. Find the fourth term from the end in an A.P. $-11,-8,-5, \ldots, 49$.
3. In an A.P. the $10^{\text {th }}$ term is 46 , sum of the $5^{\text {th }}$ and $7^{\text {th }}$ term is 52 . Find the A.P.
4. The A.P. in which $4^{\text {th }}$ term is -15 and $9^{\text {th }}$ term is -30 . Find the sum of the first 10 numbers.
5. Two A.P.'s are given $9,7,5, \ldots$ and $24,21,18, \ldots$. If $n^{\text {th }}$ term of both the progressions are equal then find the value of n and $\mathrm{n}^{\text {th }}$ term.
6. If sum of $3^{\text {rd }}$ and $8^{\text {th }}$ terms of an A.P. is 7 and sum of $7^{\text {th }}$ and $14^{\text {th }}$ terms is -3 then find the $10^{\text {th }}$ term.
7. In an A.P. the first term is -5 and last term is 45 . If sum of all numbers in the A.P. is 120 , then how many terms are there? W hat is the common difference?
8. Sum of 1 to $n$ natural numbers is 36 , then find the value of $n$.
9. Divide 207 in three parts, such that all parts are in A .P. and product of two smaller parts will be 4623.
10. There are 37 terms in an A.P., the sum of three terms placed exactly at the middle is 225 and the sum of last three terms is 429 . W rite the A.P.
11. . If first term of an A.P. is a, second term is b and last term is c , then show that sum of all terms is $\frac{(a+c)(b+c-2 a)}{2(b-a)}$.
12. . If the sum of first $p$ terms of an A.P. is equal to the sum of first $q$ terms then show that the sum of its first $(p+q)$ terms is zero. $(p \neq q)$
13. $\begin{array}{ll}\text { If }\end{array} m$ times the $m^{\text {th }}$ term of an A.P. is eqaul to $n$ times $n^{\text {th }}$ term then show that the $(m+n)^{\text {th }}$ term of the A.P. is zero.
14. ₹ 1000 is invested at 10 percent simple interest. Check at the end of every year if the total interest amount is in A.P. If this is an A.P. then find interest amount after 20 years. For this complete the following activity.

Simple interest $=\frac{P \times R \times N}{100}$
Simple interest after 1 year $=\frac{1000 \times 10 \times 1}{100}=\square$
Simple interest after 2 year $=\frac{1000 \times 10 \times 2}{100}=\square$
Simple interest after 3 year $=\frac{\square \times \square \times \square}{100}=300$
According to this the simple interest for 4, 5, 6 years will be 400 , $\qquad$respectively.
From this $\mathrm{d}=\square$, and $\mathrm{a}=\square$
A mount of simple interest after 20 years

$$
\begin{aligned}
& \mathrm{t}_{\mathrm{n}}=\mathrm{a}+(\mathrm{n}-1) \mathrm{d} \\
& \mathrm{t}_{20}=\square+(20-1) \square \\
& \mathrm{t}_{20}=\square
\end{aligned}
$$

A mount of simple interest after 20 years is $=\square$

## 4 Financial Planning

## Let's discuss.

Teacher : Dear students, in our country which tax system is in practice for business?
A yush: GST system is in practice.
Teacher: Very good! What do you know about GST ?
A yan: GST stands for Goods and Service Tax.
A isha: $\quad Y$ es, the whole country follows the same tax levy system.
Teacher : Correct, before GST every state had variety of taxes levied at different stages of trading. Observe the picture given below and tell which taxes existed before GST and are now subsumed in GST ?
Shafik: Taxes that existed before were Excise Duty, Custom Duty, VAT, Entertainment tax, Central sales tax, Service tax, Octroi etc.
Teacher : All these taxes are subsumed under GST, that is why GST is One nation, One tax, O ne market. GST is in effect from $1^{\text {st }}$ of July 2017.

## Let's learn.

## Tax Invoice

## Tax Invoice of goods purchase (Sample)

SUPPLIER : A to Z SWEETMART
GSTIN : 27A BCDE 1234H $1 Z 5$
143, Shivaji Rasta, M umbai : 400001, M aharashtra. M o No. 9263692111 e-mail - atoz@gmail.com
Invoice No. GST/110
Invoice Date: 31-Jul-2017

| $\begin{gathered} \text { S. } \\ \text { No. } \end{gathered}$ | HSN code | $\begin{gathered} \text { Name } \\ \text { of } \\ \text { Product } \end{gathered}$ | R ate | Quantity | Taxable <br> Amount | $\stackrel{\text { Rate }}{\text { CGST }}^{\text {Cax }}$ |  | $\underset{\text { Rate }{ }^{\text {SGST }}}{\text { Tax }}$ |  | Total ₹ | $\begin{array}{r} 236 \\ -200 \end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| , | 210690 | Pedhe | ₹ 400 per kg! | 500 gm .2 | -200.00 | 2.5\% | 5.00 | 2.5\% | 5.00 | 210.00 |  |
| $\checkmark$ | 210691 | Chocolate | ₹ 80 , | $1 \mathrm{Bar}{ }^{\text {r }}$ | 80.00 | M4\% | 11.20 | 14\% | 11.20 | 102.40 |  |
| 3 | 2105 | Ice-cream | $\begin{aligned} & \text { ₹ } 200 \\ & \text { per pack } \end{aligned}$ | $\begin{gathered} 1 \text { pack } 2 \\ (500 \mathrm{gm} .) \end{gathered}$ | 200.00 | $9 \%$ | $18.00$ | 9\% | $18.00$ | 236.00 |  |
| 4 | 1905 | B read | ₹ 35 V | 1 pack | 35.00 | 0\% | 0.00 | 0\% | 0.00 | 35.00 |  |
| /5 | 210690 | Butter | ₹ 500 per kg. | 250 gm | 125.00 | 6\% | 7.50 | 6\% | 7.50 | 140.00 |  |
| Total Rupees |  |  |  |  |  |  | 41.70 |  | 41.70 | 723.40 |  |

Ved: In the invoice we see some new words, please explain them.
Teacher: CGST and SGST are two components of GST. CGST is Central Goods and Service $\boldsymbol{T}$ ax which is to be paid to the central government. Whereas SGST is $\boldsymbol{S}$ tate $\mathbf{G}$ oods and Service $\mathbf{T}$ ax which is to be paid to the state government.
Ria: What is in the right most corner with a long queue of numbers and al phabets?
Teacher : It is GSTIN, dealer's indentification number. (GSTIN- G oods and Service Tax Identification Number). GSTIN is mandatory for the dealer whose annual turn over in previous financial year exceeds rupees 20 lacs. You know that PAN has 10 alpha-numerals, similarly GSTIN has 15 alphanumerals. It includes $1 \overline{10 \text { digitPAN }}$ of the dealer.
e.g. : 27 A B C D E 1234 H 1 Z 5 10 digit PAN of the firm
1 represents one registration
N ote : Here 27 is the state code of $M$ aharashtra. From Uniform for all (By default) 27, one can understand that a person or a firm is

2 digits for state code

Check sum digit (confirms the validity of GSTIN when entered on GST portal)

Jennie : There is a word HSN code in the tax invoice.

Teacher: All Goods are classified by giving numerical code called HSN code. It is to be quoted in the tax invoice. Full form of HSN is Harmonized System of Nomenclature. ~
J oseph : A s usual there is name of the shop, address, state, date, invoice number, mobile number and e-mail ID also in the tax invoice.
Teacher : N ow we will see how the GST is charged for each product (Goods) in the bill. 0 bserve the given bill and fill in the boxes with the appropriate number. Price of 1 kg of Pedhe is ₹ 400 , therefore cost of 500 gm . of Pedhe is ₹ 200 . CGST at the rate of $2.5 \%$ is ₹ 5 and SGST at the rate of $2.5 \%$ is ₹ 5.00 .

- It means that the rate of GST on Pedhe is $2.5+2.5=5 \%$ and hence the total GST is ₹ 10.
- The rate of GST on chocolate is $28 \%$ and hence the total GST is ₹ 22.40
Rate of GST on Ice-cream is 18 \%, hence the total cost of ice-cream is ₹ 36
- On butter CGST rate is $6 \%$ and SGST rate is also $6 \%$. So GST rate on butter is $12 \%$.
Aditya : Rate of GST on bread is $0 \%$. The rate of CGST and SGST is same for each product.
Ninad: Rates of GST are different for diferent products such as 0\%, 5\%, 12\%, 18\% and 28\%.
Teacher : These rates are fixed and prescribed by the government. Now let us observe the tax rnvoice of services provided. Fill in the blanks with the help of given information.

|  |  | $\checkmark$ Tax | voice | service | provi | (Sam | (e) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $x^{2} \frac{5}{5}$ | GSTIN | Mo. No. 75 27 AAAAA 555 | $\begin{aligned} & \text { od Jun } \\ & 88580 \\ & 5 B 1 Z \end{aligned}$ | tion, K he 00 email | hed-Shiva - ahar.k | $\begin{aligned} & \text { ur, Pune } \\ & \text { led@ yar } \\ & \text { Invoi } \end{aligned}$ | I <br> ahoo.com <br> ice Dat | $\begin{aligned} & \text { nvoice } \\ & n \\ & \text { e } 25 \text {-De } \end{aligned}$ | $\begin{aligned} & \hline \text { No. } 58 \\ & \text { c-2017 } \end{aligned}$ |
|  | SAC | Food items | Qty | $\begin{aligned} & \text { Rate } \\ & \text { (in ₹) } \end{aligned}$ | Taxable amount |  | $\underbrace{\text { GST }}_{3}$ |  |  |
| 28 | 9961 | $\checkmark$ Coffee | 1 | $\checkmark 20$ | 20.00 | 2.5\% | 0.50 | 2.5\% | .0.5 |
|  | 9963 | $\checkmark$ M asala Tea | 1 | 10 | 10.00 | 2:5\% | 0.25 | 2.5\% | . $0: 25$ |
|  | 9962 | M asala Dosa | 2 | 60 | 4.120 | 2.5\% | 3. | 2.5 | 3. |
|  |  |  |  | Total | 1.50 | + | $3: 75$ | + | 3:75 |
|  |  |  |  |  | - | rand T | oṭal = | ₹ - +5 | 7.5 |

Teacher: Compare both, Goods and Service Tax invoices and find the difference in codes.

Patrick : In the tax invoice for Goods, there is HSN code while in service invoice there is SAC.
Teacher: Services are also classified and special code numbers are given. These are called SAC or Service Accounting Code.

| $\begin{aligned} & \text { Sr. } \\ & \text { No. } \end{aligned}$ | Types | $\begin{gathered} \text { Rate of } \\ \text { GST } \end{gathered}$ | Goods and services items list |
| :---: | :---: | :---: | :---: |
| 1 | $\begin{aligned} & \text { Zero } \\ & \text { rated } \end{aligned}$ | 0\% | G oods - Essential Commodities like food grains, fruits, vegetables, milk, salt, earthen pots etc. <br> Services- Charitable trust activities, transport of water, use of roads and bridges, public library, agriculture related services, Education and Heal th care services etc. |
| II | Low rated | 5\% | G oods- Commonly used items- LPG cylinder, Tea, coffee, oil, Honey, Frozen vegetables, spices, sweets etc. Services - Railway transport services, bus transport services, taxi services, Air transport (economy class), Hotels providing food and beverages etc. |
| III | Stand- <br> ard <br> rated <br> (I slab) | 12\% | Goods- Consumer goods: Butter, Ghee, Dry fruits, Jam, Jelly, Sauces, Pickles. M obile phone etc. <br> Services - Printing job work, Guest house, Services related to construction business. |
| IV | Stand- <br> ard <br> rated <br> (II slab) | $18 \%$ <br> (M ost <br> of the <br> Goods and <br> services <br> are <br> included) | Goods - Marble, Granite, Perfumes, Metal items, Computer, Printer, M onitor, CCTV etc. <br> Services - Courier services, Outdoor catering, Circus, Drama, Cinema, Exhibitions, Currency exchange, B roker Services in share trading etc. |
| V | Highly rated | $\frac{28 \%}{2}$ | G oods - Luxury items, M otor Cycles and spare parts, Luxury cars, Pan-masala, Vacuum cleaner, Dish washer, AC, Washing machine, Fridge, Tobacco prodū̄ts, Aérated water etc. <br> Services - Five star Hotel accommodation A musement parks, W ater parks, Theme parks, Casino, Racecourse, IPL games, A ī transport (business class) etc. |
| Reference : www.cbec.gov.in (Central B oard of Excise \& Customs) <br> Besides these rates, find on which goods are the GST rates levied between 0 and 5 ? |  |  |  |

Note : - The rates and types of GST are as prescribed by the government at the time of writing this chapter. GST rates are subject to change. Electricity, petrol, diesel etc are not under purview of GST.

Activity I: M ake a list of ten things you need in your daily life. Find the GST rates with the help of GST rate chart given here, N ews papers or books, internet, or the bills of purchases. Verify these rates with the list prepared by your friends.

| Goods | Rate of GST | Goods | Rate of GST |
| :---: | :---: | :---: | :---: |
| 1. Sketch book | ----- | 6. - - -- | ----- |
| 2. Compass-box | ---- | 7.-- - - | ---- |
| 3. - - - - | ---- | 8. - - - - | ---- |
| 4. - - - - |  | 9. - - - - |  |
| 5. ---- |  | 10. ---- |  |

Activity II: Make a list of ten services and their GST rates as per actvity I. (e.g. Railway and ST bus booking services etc.) You can also collect service bills and complete the given information

| Services | R ate of GST | Services | Rate of GST |
| :---: | :---: | :---: | :---: |
| 1.Railway booking | ---- - | 6. - - -- | ---- |
| 2.Courier Services | ---- | 7.- | ---- |
| 3.- - -- |  | 8. - - - - | ---- |
| 4.- - - - | ---- | 9. - - - - | ---- |
| 5.---- |  | 10. - - - - | ---- |

Activity III: Complete the given table by writing remaining SAC and HSN codes with rates and add some more items in the list.

| Services | SAC | GST rate | Goods | HSN | GST rate |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Railway transport <br> services | 996511 | -- | Dulux paint | 3208 | $28 \%$ |
| A irways services <br> (economy) | 996411 | -- | B all bearing | 84821011 | $28 \%$ |
| Currency exchange <br> services | 997157 | -- | Speedometer | 8714 | $28 \%$ |
| Brokerage services | 997152 | -- | Potatoes | 0701 | $0 \%$ |
| Taxi services | 996423 | -- | -- | -- | -- |
| Five-star Hotel services | 9963 | -- | -- | -- | -- |
| -- | -- | -- | -- | -- | -- |

Activity IV : Prepare a chart of Goods and Services as in activity III with codes and GST rates. Stick or draw the pictures of Goods and services to enhance your activity.
Note : Rates on goods and services, SAC and HSN codes are only for information, no need to remember them.
Project: Collect various Goods and Service tax invoices. Study these invoices with reference to GST and discuss with your classmates.

## SSES Solved Examples $\mathscr{S}$ SS

Ex. (1) Arati Gas Agency supplied LPG cylinder to the consumer for taxable value of ₹ 545 . GST charged is $5 \%$. What is the amount of CGST and SGST in the tax invoice? What is the total amount paid by the consumer? Find the amount of GST to be paid by Arati Gas Agency.

Solution : Rate of GST $=5 \% \quad \therefore$ Rate of CGST 2.5\%, and Rate of SGST $=2.5 \%$. CGST $=-\frac{2.5}{100} \times(45=13.625=₹ 13.63$
$\therefore$ SGST $=$ CGST $=₹ 13.63$

Arati Gas Agency has to pay CGST $=₹ 13.63$. and SGST $=₹ 13.63$
$\therefore$ Total GST to be paid $=13.63 \times 2=₹ 27.26$
Ex. (2) Courier service agent charged total ₹ 590 to courier a parcel from Nashik to Nagpur. In the tax invoice taxable value is ₹ 500 on which CGST is ₹ 45 and SGST is ₹ 45 . Find the rate of GST charged for this service.
Solution : Total GST = CGST + SGST = $45+45=₹ 90$.

$$
\text { Rate of GST }=\frac{90}{500} \times 100=18 \%
$$

$\therefore$ Rate of GST charged by agent is $18 \%$.
Ex. (3) Shreekar bought a Laptop with $10 \%$ discount on printed price. The printed price of that Laptop was ₹ 50,000 . $18 \%$ GST was charged on discounted price. Find the amount of CGST and SGST. What amount did Shreekar pay ?
Solution : Discount $=10 \%$ of $50,000=₹ 5,000$
$\therefore$ Taxable value of Laptop $=50,000-5,000=₹ 45,000$.
$\therefore$ Rate of GST $=18 \%$ (Given) $\quad \therefore$ Rate of CGST $=9 \%$
$\therefore$ CGST $=9 \%$ of $45,000=\frac{9}{100} \times 45000=₹ 4050$.
$\therefore$ SGST $=₹ 4050$.
$\therefore$ Amount paid $=45000+4050+4050=₹ 53,100$.
Ans. Shreekar paid ₹ 53,100 for the Laptop.

Note : Value of Goods on which GST is levied is called taxable value. Total value or Invoice value is the value with GST. If not mentioned take the selling prices as taxable price. Remember that in tax invoice CGST amount is always equal to SGST amount.

## Practice Set 4.1

1. 'Pawan Medical' supplies medicines. On some medicines the rate of GST is $12 \%$, then what is the rate of CGST and SGST? $6 \% 6 \%$
2. On certain article if rate of CGST is $9 \%$ then what is the rate of SGST? and what is the rate of GST? $9 \%, 18 \%$
3. 'M/s. Real Paint' sold 2 tins of lustre paint and taxable value of each tin is ₹ 2800. If the rate of GST is $28 \%$, then find the amount of CGST and

4. The taxable value of a wrist watch belt is ₹ 586 . Rate of GST is $18 \%$. Then what is price of the belt for the customer ?
5. The total value (with GST) of a remote-controlled toy car is ₹ 1770. Rate of GST is $18 \%$ on toys. Find the taxable value, CGST and SGST for this toy-car.
6. 'Tiptop Electronics' supplied an AC of 1.5 ton to a company. Cost of the AC supplied is ₹ 51,200 (with GST). Rate of CGST on AC is $14 \%$. Then find the following amounts as shown in the tax invoice of Tiptop Electronics.
(1) Rate of SGST $14 \%$
(2) Rate of GST on $\mathrm{AC}^{28^{\circ}}(3)$
3) Taxable value of AC $x$
(4) Total amount of GST
(5) Amount of CGST
(6) A mount of SGST
7. Prasad purchased a washing-machine from 'Maharashtra Electronic Goods'. The discount of $5 \%$ was given on the printed price of ₹ 40,000 . Rate of GST charged was $28 \%$. Find the purchase price of washing machine. Also find the amount of CGST and SGST shown in the tax invoice.

## Let's learn.

GSF in trading chain

Let's learn through an example how GST is charged and paid to the government at every stage of trading.
Illustration : Suppose manufacturer of a watch has sold one watch for ₹ 200 . (including profit) to the wholsaler. Wholesaler sold that watch for $₹ 300$ to the retailer. Retailer sold it to the customer for ₹ 400. Rate of GST charged at every stage is $12 \%$. Then how each trader $\overline{\mathrm{pays}}$ GST and takes his input tax credit (ITC) $\overline{\overline{a t}}$ every stage of transaction is shown in the following flow-chart. Observe and study it.

## Explanation :

Here three financial transactions took place till the watch from manufacturer reaches to the customer. How the taxes are charged, collected and paid to the central government and state government at each stage is shown below. The statement of taxes paid is given in the table thereafter.

Here all the three financial transactions took place in one state. Therefore three tax invoices were generated as follows. Each tax invoice shows the brief computation of GST.

Tax invoice of manufacturer
B2B

| GST in Tax Invoice II |
| :--- |
| Price of watch $=₹ 300$ |
| CGST 6\% $=₹ 18$ |
| SGST 6\% $=₹ 18$ |
| Total |

Tax invoice of wholesaler
B2B

## Let's remember!

- Trading between GSTIN holders is known as Business to Business, in short B2B. Trading between GSTIN holder and consumer is known as Business to Consumer, in short B2C. This is the last link in the trading chain.
B ifurcation of taxes paid to the government by the traders at each stage.

|  | CGST | SGST | Total GST paid |
| :---: | :---: | :---: | :---: |
| - By the manufacturer | ₹ $12+$ | ₹ 12 | $=\longrightarrow$ ₹ 24 |
| - By the wholesaler | ₹ 6 _ + | ₹ 6 | $=\longrightarrow$ ₹ 12 |
| - By the retailer | ₹ $6+$ | ₹ 6 | $=$ - ₹ 12 |
|  | ₹ 24 + | ₹ 24 | $=$ ₹ 48 |

Note : Observe that at every stage, a trader has paid GST after subtracting the tax he paid at the time of purchase from the tax he collected at the time of sale.

At the end the customer paid ₹ 448 for the watch. So the total tax paid by the traders was indirectly paid by the customer. So GST is a type of indirect tax. In this case, the wholesaler and retailer used their input tax as credit and got back all the GST paid by them.

## What is Input Tax Credit? (ITC)

GST is levied and collected at every stage of trading from manufacturer to consumer. When trader paysGST) at the time of purchase, it is called 'Input tax' and he collects GST at the time of sale which is called 'Output tax'. At the time of paying GST to the government a trader deducts the input tax from the output tax and pays the remaining tax. This deduction of input tax is called Input Tax Credit.
GST payable $=$ Output tax - ITC
In short, while paying taxes to the government each trader in the trading chain subtracts the tax paid at the time of purchase from the tax collected at the time of sale and pays the remaining tax.

## © © S Solved Examples $\mathscr{E C O}$

Ex. (1) Mr. Rohit is a retailer. He paid GST of ₹ 6500 at the time of purchase. He collected GST of ₹ 8000 t the time of sale. (i) Find his input tax and out put tax. (ii) What is his Input tax credit? (iii) Find his payable GST. (iv) Hence find the payable CGST and payable SGST.
Solution : Mr. Rohit's payable GST means, GST to be paid to the government by $\longrightarrow$ Mr. Rohit.
(i) Output tax (tax collected at the time of sale) $=₹ 8000$
(ii) Input tax (tax paid at the time of purchase) $=₹ 6500$

$$
\therefore I T C=₹ 6500 .
$$

(iii) GST payable $=0$ utput tax - ITC

$$
=₹ 8000-₹ 6500=₹ 1500
$$

(iv) $\therefore$ payable CGST $=\frac{1500}{2}=₹ 750$ and payable SGST $=₹ 750$.

Ex. (2) M/s. Jay Chemicals purchased a liquid soap having taxable value ₹ 8000 and sold it to the consumers for the taxable value ₹ 10,000 . Rate of GST is $18 \%$. Find the CGST and SGST payable by M/s. Jay Chemicals.

## Solution :

Input Tax $=18 \%$ of 8000

$$
=\frac{18}{100} \times 8000=₹ 1440 \text {. }
$$

Output Tax $=18 \%$ of 10,000

$$
=\frac{18}{100} \times 10000=₹ 1800
$$

$\therefore$ GST payable $=0$ utput tax - ITC

$$
\begin{aligned}
& =1800-1440 \\
& =₹ 360
\end{aligned}
$$

$\therefore$ payable CGST = ₹ 180 and payable SGST $=₹ 180$ by M/s. Jay Chemicals
Ex. (3) M/s. Jay Chemicals purchased a liquid soap for ₹ 8000 (with GST) and sold it to the consumers for ₹ 10,000 (with GST). Rate of GST is $18 \%$. Find the amount of CGST and SGST to be paid by Jay Chemicals
Solution : Note that here the prices are including GST.

Total value (value with GST) = Taxable value +GST
If the taxable value of liquid soap is ₹ 100 , then the total value is ₹ 118 . The ratio of $\frac{\text { Total value }}{\text { Taxable V alue }}$ is constant as the rate of GST is same.
i) For total value of ₹ 118 , the taxable value is ₹ 100 and for total value of ₹ 8000 , let the taxable value be ₹ $x$.
$\therefore \frac{\mathrm{x}}{8000}=\frac{100}{118}$
$\therefore \mathrm{x}=\frac{8000}{118} \times 100=₹ 6779.66$
$\therefore$ GST paid at the time of purchase $=8000-6779.66$

$$
\begin{equation*}
\text { Input tax }=₹ 1220.34 \quad \therefore \text { ITC }=₹ 1220.34 . \tag{I}
\end{equation*}
$$

ii) For total value of ₹ 10,000 let the taxable value be ₹ $y$.
$\therefore \frac{y}{10000}=\frac{100}{118}$
$\therefore \mathrm{y}=\frac{10,00,000}{118}=₹ 8474.58$.
$\therefore$ Output tax (tax collected) $=10000.00-8474.58$

$$
\text { = ₹ } 1525.42 \ldots \ldots \text { (II) }
$$

$\therefore$ GST payable $=0$ utput tax - Input tax $=1525.42-1220.34$

$$
\text { = ₹ } 305.08 \text {. }
$$

$\therefore$ payable CGST $=$ payable SGST $=305.08 \div 2=₹ 152.54$
Ans.: Jay Chemicals has to pay ₹ 152.54 CGST and ₹152.54 SGST.
Note : Observe Ex. 2 and Ex. 3 carefully. Both the types of 'Tax Invoices' are commonly used. While purchasing goods, ask the shopkeeper whether the printed price includes GST.

## ICT Tools or Links.

Note : A trader (tax payer) has to pay the GST within the prescribed time limit. He has to submit and file the GST returns as per the rules. All these can be done online. You can learn more about GST returns on www.gst.gov.in. (GST offline utility is also available to prepare returns)

Ex. (4) Suppose a manufacturer sold a cycle for a taxable value of ₹ 4000 to the wholesaler. Wholesaler sold it to the retailer for ₹ 4800 (taxable value). Retailer sold it to a customer for ₹ 5200 (taxable value). R ate of GST is $12 \%$. Complete the following activity to find the payable CGST and SGST at each stage of trading.

Solution : Trading chain

Output tax of manufacturer $=12 \%$ of $4000=400 \times \frac{120}{100}=480$
GST payable by manufacturer $=₹ 480$
Output tax of wholesaler $=12 \%$ of $4800=₹ 576$
$\therefore$ GST payable by wholesaler $=0$ output tax - Input tax

$$
\begin{aligned}
& =576-480 \\
& =₹ 96
\end{aligned}
$$

Output tax of retailer $=12 \%$ of $5200=624$ $\frac{12}{100} \times 5205$

- GST payable by Retailer $=0$ output tax of retailer - ITC of retailer

$$
\begin{aligned}
& =624-5 I 0576 \\
& =48
\end{aligned}
$$

Statement of GST payable at each stage of trading

## Let's think.

- Suppose in the month of July the output tax of a trader is equal to the input tax, then what is his payable GST?
- Suppose in the month of July output tax of a trader is less than the input tax then how to compute his GST?

## Practice Set 4.2

1 'Chetana Store' paid total GST of ₹ $1,00,500$ at the time of purchase and collected 122500 GST ₹ $1,22,500$ at the time of sale during $1^{\text {st }}$ of July 2017 to $31^{\text {st }}$ July 2017. Find $-100500$ the GST payable by Chetana Stores. 22000

Nazama is a proprietor of a firm, registered under GST. She has paid GST of ₹ 12,500 on purchase and collected ₹ 14,750 on sale. What is the amount of ITC to be claimed ? $W$ hat is the amount of GST payable? ITC=12500, GST $=2250$
3. A mir Enterprise purchased chocolate sauce bottles and paid GST of ₹ 3800 . He sold those bottles to A kbari Bros. and collected GST of ₹ 4100. M ayank Food Corner purchased these bottles from A kabari Bros and paid GST of ₹ 4500 . Find the amount of GST payable at every stage of trading and hence find payable CGST and SGST.

4.M alik Gas A gency (Chandigarh Union Territory) purchased some gas cylinders for industrial use for ₹ 24,500, and sold them to the local customers for ₹ 26,500. Find the GST to be paid at the rate of 5\% and hence the CGST and UTGST to be paid for this transaction. (for Union Territories there is UTGST instead of SGST.)
5. M/s Beauty Products paid $18 \%$ GST on cosmetics worth ₹ 6000 and sold to a customer for ₹ 10,000 . What are the amounts of CGST and SGST shown in the tax invoice issued?
6. Prepare Business to Consumer (B2C) tax invoice using given information. W rite the name of the supplier, address, state, Date, invoice number, GSTIN etc. as per your choice. Supplier: M/s - -- - Address---- State--- - Date

Invoice No. - - - - GSTIN -- -------- - - - -
Particulars - Rate of M obile Battery - ₹ 200 Rate of GST 12\% HSN 8507, 1 pc. Rate of Headphone - ₹ 750 Rate of GST 18\% HSN 8518, 1 pc.
(7) Prepare Business to Business (B2B) Tax Invoice as per the details given below. name of the supplier, address, Date etc. as per your choice.
Supplier - Name, Address, State, GSTIN, Invoice No., Date
Recipient - Name, A ddress, State, GSTIN,
Items: (1) Pencil boxes 100, HSN - 3924,
(2) Jigsaw Puzzles 50, HSN 9503,

| Rate - ₹ 20, | GST 12 $\%$ |
| :--- | :--- |
| Rate - ₹ 100 | GST $12 \%$. |

## For M ore Information

## C omposition Scheme

The person whose annual turn over in the previous financial year is less than 1.5 crore can opt for composition scheme under GST rules. GST rates applicable to composition dealers are as follows.

GST rates for composition Scheme

| Sr. <br> No. | Supplier | GST rate | (CGST + SGST) |
| :---: | :--- | :---: | :---: |
| 1. | Restaurants | $5 \%$ | $2.5 \%+2.5 \%$ |
| 2. | M anufacturers \& traders | $1 \%$ | $0.5 \%+0.5 \%$ |

## Some rules for composition dealers

- Composition dealers cannot collect tax from the customers, hence they can not issue tax invoice. They have to give 'bill of supply'.
- Composition dealers should file the return quarterly (i.e. every 3 months.)
- Composition dealers cannot sell goods outside the state (Inter-state sale is not allowed) But they can purchase goods from other states.
- Composition dealers cannot avail the benefits of ITC.
- On the signboard of the shop, he should mention 'Composition taxable person'.
- On the B ill of supply it is mandatory to print 'Composition taxable person not eligible to collect tax on supplies' in bold letters.

## Features of GST

- M any Indirect Taxes are subsumed under GST.
- No dispute between Goods and Services.
- Statewise Registration for traders.
- GSTIN holder needs to keep all the records and should pay GST in time.
- Transparency in transactions.
- This tax system is simple and easy to understand .
- Removal of cascading effect of taxes hence the prices are controlled
- Increase in Quality of Goods and Services as they are globally competetive.
- Boost to 'M ake in India’ project.
- Technology driven tax system leads to speedy decisions.
- Goods and Service Tax system is a Dual model, as equal amount of tax is levied by Central and State governments.

## For M ore Information

## IG ST - Integrated G ST (for Inter state trade)

When trading of goods and services takes place between two or more states, the GST is Ievied only by the Central Government, and it is termed as IGST, hence the total amount is paid to the Central Government.
Suppose if a trader buys goods from another state and sells them in his state, then let us see how he can avail of the ITC, which he has paid as IGST at the time of purchase.
For example: Trader 'M ' (of M aharashtra) purchased scooter parts for ₹ 20,000 from trader 'P' (of Punjab) and paid tax of ₹ 5600 as IGST (GST rate 28\%) to the trader ' P '.

Trader 'M ' sold these parts to local consumers for ₹ 25,000 and collected ₹ 7000 GST at the rate of $28 \%$, bifurcated as CGST ₹ 3500 + SGST ₹ 3500
At the time of paying taxes to the Government, see, how to take ITC of ₹ 5600 .

Note : For taking credit of IGST first preference to be given to pay the liability of IGST then CGST and remaining amount can be utilised to pay SGST. Here there is no IGST during the sale for trader ' M ', so first the credit is used for CGST and then for SGST.

## C GST payable $=3500-3500=\mathbf{0}$

So out of ₹ 5600 credit of ₹ 3500 is utilised for CGST and the remaining amount $5600-3500=2100$ is the credit available for SGST
$\therefore$ SGST payable $=3500-2100=1400 ₹$
Trader 'M' has to pay ₹ 1400 as SG ST.
Note that, trader ' ${ }^{\prime}$ ' got full credit of ₹ 5600 . (so that ITC is completely utilised)

## Rule for availing ITC

ITC paid at the time of purchase
Tax collected (output liabilities)
Firstly₹ $(0) \longrightarrow$ utilised for IGST
While taking credit of IGST
(₹ 5600)

Hence payable SGST is ₹ 1400

## Let's recall.

In the previous class we have learnt the importance of savings and investments, which you might have started practising whenever possible. We develop good habits to maintain physical health, in the same way we should develop a habit of saving and investing regularly to maintain financial health. There are many different ways of investments. So deep study and experience both are essential.

## Let's discuss.

Shweta is working in a company. From this month her salary increased by 5\% and in the next month she will also get bonus. She is thinking of investing this increment. Her friend Neha is working in the office of a financial advisor, so she can advise Shweta in this matter. Neha told, 'It is important to have diversification in one's investments. e.g. you should think of investing in life insurance, health insurance, owning a house, FD's and
 recurring account in the bank etc...' Shweta said, 'I have insurance and FD in the bank. Even Provident Fund is deducted regularly from my salary. W hat are the other ways?' Neha $\overline{\text { answered, "Investing in shares, M utual }}$ Funds (M F), Debentures, Bonds etc is more popular these days. Inclination of people towards SIP is also increasing. Well I think, you are getting salary increment every month, sर्ड्Systematic Investment Plan (SIP) is suitable for you."

We hear such dialogues every now and then. So we all must have the current information beneficial for all as it says 'बहुजन हिताय, बहुजन सुखाय'.

In this chapter we shall learn about shares, mutual funds and SIP before actually investing in them.

## Let's learn.

## Shares

To own a shop is proprietorship. When two or more individuals coming together to carry out a business is a partnership, which requires small capital. To establish a company, desiring persons come together and form a company. Company is to be registered under the Indian Companies' Act, 1956. Persons who form a company are called Promoters and the company is called Limited Company.
A mount required to start a company is called Capital. This capital is divided into small equal parts, each part is of ₹ 1 , ₹ 2 , ₹ 5 , ₹ 10 or ₹ 100 etc. This small part is called share of the company. These shares are sold in the sharemarket to raise the capital.
Share : A share is the smallest unit of the capital. The value of a share is printed on the company's certificate with other details and it is called a share certificate.
Share Holder : A person who owns the share is called a share holder. The shareholder is a part owner of the company in the proportion of number of shares he/she holds.

Stock Exchange : It is a place where buying and selling of shares take place. It is also known as share market or stock market, equity market or capital market. Companies should be listed in the stock market for trading.
Face Value (FV): The value printed on the share certificate is called the Face value of the share. It is also called Nominal value or Printed value or par value.

## $100 \rightarrow 1000 \rightarrow 100000$

$\checkmark$ Market Value (MV) : The price at which the shares are sold or purchased in the stock market is called Market value (MV) of the share.

In the live sharemarket the M arket V alue changes frequently.
If the company's performance is better than expected, then those shares are in demand. The number of shares is fixed, therefore share supply could not be increased and hence the share price increases. If the company is not doing well, the share price falls. [Increase in price is shown by (green triangle upward), and decrease in price is shown by (Red triangle downward).] This is the reason for increase or decrease in SENSEX and NIFTY index.

Dividend : The part of annual profit of a company which is distributed per share among shareholders is called dividend. If the company is performing well then the value of share capital increases hence the price of the share goes up. As a result company gives good devidend. For the sharehlders the devidend income is taxfree.

## Let's remember!

Whatever may be the market value, the dividend is always reckoned on the Face Value of a share.

## For more Information :

There are two main stock exchanges, of India, BSE (Bombay Stock Exchange) and NSE (National Stock Exchange). BSE is the oldest in A sia while NSE is the India's largest stock Exchange.
There are two share indices namely - SENSEX and NIFTY which reflect the overall market sentiments. SENSEX is SENSitive + indEX. Which was introduced by BSE on 1-1-1986. SENSEX is detemined from 30 stocks. They are the stocks of well established and financially sound companies from the main sectors.
NIFTY as the name suggests is made up of two words that is NSE and FIFTY which was introduced by NSE. It depends on India's topmost outperforming 50 companies.

## Comparison of FV and MV

1) Premium
2) par
3) discount $\left\lvert\, \begin{array}{ll}T V=F V \\ M V & =F V-d i s c o n t ~\end{array}\right.$
(1) If $\underline{M V}>F V$ then the share is at premium.
(2) If $\mathrm{MV}=\mathrm{FV}$ then the share is at par.
(3) If MV < FV then the share is at discount.

$100=100$
$100>1$

For example (1) suppose $\mathrm{FV}=₹ 10, \mathrm{MV}=₹ 15$ and $15-10=₹ 5$
$\therefore$ The share is at premium of $₹ 5$, as $\mathrm{MV}>\mathrm{FV}$
(2) suppose $F V=₹ 10, M V=₹ 10$ and $10-10=0$
$\therefore$ The share is at par. As MV $=F V$
(3) suppose FV $=₹ 10, \mathrm{MV}=₹ 7$ and $10-7=3$
$\therefore$ The share is at discount. As MV $<\mathrm{FV}$.
Sum Invested : Total amount required to purchase the shares is sum invested.
$\checkmark$ Sum invested $=$ Number of shares $\times$ MV
Ex. (1) If 50 shares of $\mathrm{FV} ₹ 100$ each are purchased for $\overline{M V}=120$. Find the sum invested.
Solution: Sum invested $=$ number of shares $\times \mathrm{MV}$

$$
=50 \times 120=₹ 6000
$$

$\mathbf{E x}_{\mathbf{X}}$ (2) If you want to purchase 50 shares $\overline{\text { of MV } ₹ 50 \text { each. What is the total }}$ amount to be paid ?

Solution : Sum invested $=$ Number of shares $\times$ MV $=50 \times 50=₹ 2500$

## Rate of Return - Rod

When we invest in shares, it is important to know the return on investment. Observe the following example.
Ex. (1) Shriyash purchased a share of FV ₹ 100 for MV of ₹ 120. Company declared $15 \%$ dividend on the share. Find the rate of return.
Solution : $\mathrm{FV}=₹ 100, \mathrm{MV}=₹ 120 \mathrm{D}=$ Dividend $=15 \%$ per share. Remember here, that on investment of ₹ 120 Shriyash got ₹ 15 . Let the rate of return be $\mathrm{x} \%$

$$
\therefore \frac{15}{120}=\frac{\mathrm{x}}{100} \quad \therefore \mathrm{x}=\frac{15 \times 100}{120}=\frac{25}{2}=12.5 \%
$$

Ans. The rate of return for Shriyash is $12.5 \%$.

$$
6-8 \cdot 6
$$

Ex. (2) $\mathrm{FV}=₹ 100$, premium $=₹ 65$ then $\mathrm{MV}=$ ?
Solution : MV = FV + Premium = $100+65=₹ 165$. Market value is ₹ 165 per share.
Ex. (3) Complete the following table using given information.

| S/. No. | FV | Share is at | MV |
| :---: | :---: | :---: | :---: |
| (it | ₹ 10, | Premium of ₹ 7 | (7 |
| (ii) | ₹ 25 | Discount ot 9 | $₹ 16$ |
| (iii) | 5 | at par | ₹ 5 |

Solution : (i) $M V=10+7=₹ 17$ (ii) at discount of $25-16=₹ 9$ (iii) $F V=₹ 5$.
Ex. (4) Neel has invested in shares as follows. Find his total investment. Company A: 350 shares, $\mathrm{FV}=₹ 10$, premium $=₹ 7$ Company B : 2750 shares, $\mathrm{FV}=₹ 5$, Discount $=₹ 1$. Company C : 50 shares, $\mathrm{FV}=₹ 100, \mathrm{MV}=₹ 150$.
Solution : Company A : Premium =₹ 7 MV $=$ FV + Premium

$$
=10+7=₹ 17 .
$$

$\therefore$ Investment in company A $=$ Number of shares $\times \mathrm{MV}$

$$
=350 \times 17=₹ 5950 .
$$

Company B : FV = ₹ $5, \mathrm{MV}=₹ 4$.
$\therefore$ Investment in company $\mathrm{B}=$ Number of shares $\times \mathrm{MV}$

$$
=2750 \times 4=₹ 11,000 .
$$

Company C : FV = ₹ 100, MV = ₹ 150 .
$\therefore$ Investment in company C $=$ Number of shares $\times \mathrm{MV}$

$$
=50 \times 150=₹ 7500 .
$$

Ans. Neel has invested $5950+11000+7500=₹ 24,450$.
Ex. (5) Smita has invested ₹ 12,000 and purchased shares of FV ₹ 10 at a premium of ₹ 2. Find the number of shares she purchased. complete the given activity to get the answer.
Solution : FV = ₹ 10 . Premium $=₹ 2$.
$\therefore \mathrm{MV}=\mathrm{FV}+\square=\square+\square=\square$
Total investment 12000
$\therefore$ Number of shares $=\frac{\text { Total investment }}{\mathrm{MV}}=\frac{12000}{\square}=\square$ shares
Ans: Smita has purchased $\square$ shares.

Ex. (6) If 50 shares of FV ₹10 were purchased for MV of ₹ 25 . Company declared $30 \%$ dividend on the shares then find (1) Sum investment (2) Dividend received (3) Rate of return.

Solution : $\mathrm{FV}=₹ 10, \mathrm{MV}=₹ 25$, Number of shares $=50$.
(1) $\therefore$ Sum investment $=25 \times 50=₹ 1250$.
(2) Dividend per share $=10 \times \frac{30}{100}=₹ 3$
$\therefore$ Total dividend received $=50 \times 3=₹ 150$.
Dividend income
(3) Rate of return $=\frac{\text { Sum invested }}{} \times 100$

$$
=\frac{150}{1250} \times 100=12 \%
$$

Ans
(1) Sum invested is ₹ 1250
(2) Dividend received is ₹ 150
(3) Rate of return is $12 \%$.

## Practice Set 4.3

(1) Complete the following table by writting suitable numbers and words.

$N T V=F V=100 \mathrm{~V}$
tav $=F V+$ premion
$575=F V+560$
(2) Mr.A mol purchased 50 shares of Face Value ₹ 100 when the $M$ arket value of the share was ₹ 80. Company had given $20 \%$ dividend. Find the rate of return on investment. $F v=100 \quad M V=80 \quad D D=20 \%$
(3) Joseph purchased following shares, Find his total investment.

Company A: 200 shares, FV = ₹ $2 \quad$ Premium = ₹ 18.
Company B : 45 shares,
$M V=₹ 500$
Company C : 1 share, $\quad M V=₹ 10,540$.
(4) Smt. Deshpande purchased shares of FV ₹ 5 at a premium of ₹ 20 . How many shares will she get for ₹ 20,000 ?
(5) Shri Shantilal has purchased 150 shares of FV ₹ 100 , for MV of ₹ 120. Company has paid dividend at $7 \%$. Find the rate of return on his investment.
(6) If the face value of both the shares is same, then which investment out of the following is more profitable ?

Company A : dividend 16\%, M V =₹ 80, Company B : dividend 20\%, M V =₹ 120.

## ICT Tools or Links.

Select any five shares of your choice, find their Face Values and Market Values using internet or TV or news papers. Draw the joint bar diagram and compare the difference in FV and MV of each share. Take both the types $\square$ of shares.

## Let's learn.

## Brokerage and taxes on share trading

Brokerage: We directly can't go to the stock market and buy or sell shares, only the registered members or organization (agency) of the stock market can buy or sell on our behalf. These members are called 'Share Brokers'. For catering the service of buying and selling of shares they charge some amount which is called 'Brokerage' Brokerage is paid on the Market value of the share. Grossy, Zendha, Angel
Ex. (1) Suppose if the face value of the share is ₹ 100 and market value is ₹ 150 . Let the rate of brokerage be $0.5 \%$. What amount should one pay for purchasing 100 such shares ? What amount should one receive after selling 100 such shares ?
Situation (I) At the time of buying shares:
Buying price of 1 share $=\underline{M V}+$ Brokerage $\quad 3 \quad 0.75$

$$
\begin{aligned}
& =150+0.5 \% \text { of } 150=150+\frac{0.5}{100} \times \sqrt{2}=150+\frac{1.50}{2} \\
& =150+0.75 \\
& =₹ 150.75
\end{aligned}
$$

If someone purchases 100 such shares the total cost is $100 \times 150.75=₹ 15075$. Here ₹ 15000 is the share price and $₹ 75$ is the brokerage paid.
Situation (II) At the time of selling shares.
Selling price per share $=M \vee{ }_{0 .-5}$ Brokerage

$$
\begin{aligned}
& =150-5 \% \text { of } 150=150-0.75= \\
& =₹ 149.25 .
\end{aligned}
$$

1 someone sells 100 such shares, he will get,
$100 \times 150-₹ 75=₹ 14925$ after selling 100 such shares.

- Brokerage is always calculated on $M$ arket value of shares.
- In the contract note of sale-purchase of shares, price of one share is shown with brokerage and taxes.

Project I : Visit the office of a share broker or agency in your area. Collect the information of brokerage charges, other charges and facilities given to the investors and compare.
Project II : Obtain a statement of 'Demat A ccount' and 'Trading Account'. Consult a share broker or elders in the house or use internet. Try to learn all the terms in the statement. Discuss with your friends in the class.

## For more information

Every broker is registered and governed by SEBI (Securities and Exchange Board of India) Act 1992.

For keeping records of shares, bonds, mutual funds one must have Demat account (Dematerialised Account). For sale and purchase of shares, a trading account is a must. These accounts can be opened with banks or share brokers. They are known as DP-Depository Participants. These DPs are under the control of two main depositories namely NSDL and CDSL. Demat account is same as bank saving account where shares bought are credited and shares sold are debited just like bank pass book. The statement of holding is given to the account holder with nominal charges when requested. The shares held in Demat A/C are in electronic form. Saving account is to be linked with these two accounts so that the money can be transfered as and when required. In the same way money gets credited when shares are sold. For opening these accounts share broker or bank representative gives guidance.

## Let's learn.

## GST on Brokerage Services

Share brokers provide services for purchase and sale of shares for their clients. These services are charged under GST. Rate of GST is $18 \%$ on brokerage. You can find the SAC for brokerage services.
Note :- For the safety of the investors, there are other nominal charges besides GST on brokerage. These are Security Transaction Tax (STT), SEBI charge, stamp duty etc. Here we will only consider GST on brokerage.

Ex. (2) As per Ex. (1) suppose a person has paid ₹ 15,075 for buying 100 shares. In that ₹ 75 is the brokerage. So the buyer has to pay $18 \%$ GST on ₹ 75. Let us find the amount of GST he paid to the broker and prepare the contract note.
Solution : GST $=18 \%$ of $75=\frac{-18}{100} \times 75=₹ 13.50$.
For the above share trading the contract note is as follows. (B means Buy)

| No. of <br> shares | GMV | Total price | brokerage <br> $0.5 \%$ | CGST 9\% on <br> brokerage | $\frac{\text { SGST 9\% on }}{\text { brokerage }}$ | Total value. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 100 (B) | 150 | ₹ 15000 | ₹ 75 | $₹ 6.75$ | $₹ 6.75$ | $₹ 15088.50$ |

Ex. (3) Bashirkhan purchased 100 shares of MV ₹ 40. Brokerage paid at the rate of $0.5 \%$ and rate of GST on brokerage is $18 \%$. Find the total amount he paid for the share purchase.
Solution: Value of 100 shares $=40 \times 100=₹ 4000$.
Brokerage per share $=\frac{0.5}{100} \times 40=₹ 0.20$.
$\therefore$ Cost of one share $=M V+B$ rokerage

$$
=40+0.20=₹ 40.20 .
$$

$\therefore$ Cost of 100 shares $=40.20 \times 100=₹ 4020$
$\therefore$ Brokerage on 100 share $=0.20 \times 100=₹ 20$

$$
\begin{aligned}
\therefore \text { GST } & =\frac{18}{100} \times 20 \\
& =₹ 3.60 .
\end{aligned}
$$

Ans. : Bashirkhan paid ₹ 4020 + ₹ 3.60 = ₹ 4023.60 for 100 shares.
Ex. (4) Pankajrao invested ₹ $1,25,295$ in shares of $F V$ ₹ 10 when MV is ₹ 125. Rate of brokerage is $0.2 \%$ and GST is $18 \%$. Then find (1) How many shares were purchased. (2) the amount of brokerage paid and (3) GST paid for the trading.

Solution : Sum invested $=₹ 1,25,250$, brokerage $=0.2 \%$, GST rate $=18 \%$
$\therefore$ Brokerage per share $=125 \times \frac{0.2}{100}=₹ 0.25$.
GST per share on brokerage $=18 \%$ of $0.25=₹ 0.045$
$\therefore$ Cost of 1 share $=M V+$ Brokerage + GST

$$
=125+0.25+0.045=₹ 125.295 .
$$

$\therefore$ No. of shares $=\frac{125250}{125.25}=1000$
Total brokerage $=$ brokerage per share $\times \mathrm{No}$. of shares
$\therefore$ Total brokerage $=0.25 \times 1000=₹ 250$.
Total GST $=1000 \times 0.045=₹ 45$.
Ans. (1) 1000 shares were purchased.
(2) Brokerage paid was ₹ 250 .
(3) GST paid was ₹ 45.

Ex. (5) Nalinitai invested ₹ 6024 in the shares of FV ₹ 10 when the Market Value was ₹ 60. She sold all the shares at MV of ₹ 50 after taking $60 \%$ dividend. She paid $0.4 \%$ brokerage at each stage of transactions. What $\overline{\text { was }}$ the total gain or loss in this transaction ?
Solution : Rate of GST is not given in the example, so it is not considered. $\mathcal{X}$
Shares Purchased: FV =₹ $10, \mathrm{MV}=₹ 60$
Brokerage per share $=\frac{0.4}{100} \times 60=₹ 0.24$
$\therefore$ Cost of one share $=60+0.24=₹ 60.24$
$\therefore$ Number of shares $=\smile \frac{6024}{60.24}=100$

$$
\text { Shares sold : FV ₹ 10, 0.2 , MV = ₹ } 50 \text { ~ }
$$

$\therefore$ Brokerage per share $=\frac{0 . \notin}{100} \times 50=₹ 0.20$
$\therefore$ Selling price per share $=50-0.20=₹ 49.80$
$\therefore$ Selling price of 100 shares $=100 \times 49.80=₹ 4980$
-Dividend received 60\%
$\therefore$ Dividend per share $=\frac{60}{1 \phi g} \times \underline{F} \underline{1 \phi}=₹ \underline{6}$
$\therefore$ Dividend on 100shares $=\underline{6} \times 100=₹ 600$
$\because$ Nalinitai's income $=4980+600=₹ 5580$.
Sum invested = ₹ 6024 し
$\therefore$ Loss $=6024-5580=₹ 444$
Ans. Nalinitai's loss is ₹ 444

$$
444
$$

Activity : In example (5) if GST was paid at $18 \%$ on brokerage, then the loss is ₹ 451.92. Verify whether you get the same answer.

## Let's learn.

## Mutual Fund - MF

We have learnt that a group of persons come together to form a company. They raise capital from the society by issuing shares. If company performs well, then the investors of the company get benefits in terms of dividend, bonus shares and increase in the market value gives more profit on investments. Company's market capitalization rises. All this totality helps for the progress of the country. In short, principle of sociology 'together we can progress' works here. But every coin has two sides. sometimes it might happen that instead of profit an investor may incur a loss. Can we reduce this loss? Is there a way to reduce the risk in investments? Y es, to overcome this more people invest in $M$ utual Funds.

In M utual Fund, many investors with common objectives give their money to the professional experts. They not only invest in one type of shares but also invest in various other schemes. A s a result, investment is diversified which reduces risk factor and total dividend or profit is divided equally among the investors. How to invest in M utual Fund? What is the rate of return? W hat is the locking period? W hat are the different types of investment schemes? All these questions could be answered by a Financial advisor or financial planner.

Y ou may have heard or read this sentence that, 'Investments in M utual Funds are subject to M arket risks. Read all scheme related documents carefully before invesing.' Interpret the meaning correctly. Sometimes instead of profit, investment in M utual Fund might give loss which investors have to bear.

Mutual Fund is a professionally managed investment scheme, usually run by an AMC i.e. Asset Management Company. They invest the money given by the investors in different schemes e.g. equity fund (in shares), debt fund (in debentures, bonds etc.) or balanced funds as per the investor's choice.

As we get 'shares' for the investment in sharemarket, we get 'units' when we invest in mutual fund.

The market value of 'a unit' is called 'NAV' (Net Asset Value)
NAV of one unit $\times$ Number of units $=\overline{T o t a l}$ fund value.

$10 \times 100=1000$

Note : As the market value of share changes frequently NAV of a unit also changes. One can redeem the units when needed.
-Investments in FDs of nationalised bank or Indian Postal services are more secured and safe, in comparison with other investments, but the rate of return is low. It hardly helps to overcome the rate of inflation. One must remember always that if the money is invested wisely it generates more money. For this the knowledge of financial planning is of great help.
Investments in shares and mutual funds should be made carefully because risk and returns always go hand in hand. So the habit of regular and deep study is the only key.

## Systematic Investment Plan

Suppose, one does not want to invest a big amount at once, then one could invest small amounts at regular time intervals e.g. ₹ 500 per month could be invested in mutual fund. Investment could be done monthly or quarterly. This way of investment is called SIP. SIP develops discipline of savings. SIP is a good option which in long term can achieve one's financial goals. Investment in mutual funds through SIP for a long term is beneficial. It protects investor from market fluctuations. One should invest in mutual fund for minimum of 3 to 5 years to get better returns and it is best if investment is for 10 to 15 years.

## Benefits of Mutual Funds

OProfessional fund managers. LoDiversifications of funds.
Transparency and sufficiently safe investment. Liquidity - redemption of units can be done.

- Limited risks. - Advantage of long term and short term gain.
- Investments in funds like ELSS are admissible for deduction under section 80C of income tax.

## கS\&S Solved Examples $\mathscr{S C O}$

Ex. (1) If the total value of the mutual fund scheme is ₹ 200 crores and 8 crore units are issued then find the NAV of one unit.
Solution : NAV =₹ 200 crore / 8 crore units $=₹ 25$ per unit.
Ex. (2) If NAV of one unit is $₹ 25$, then how many units will be alloted for the investment of ₹ 10,000 ?

Solution : Number of units $=$ sum invested $/$ NAV $=10,000 / 25=400$ units.

1. Market value of a share is $₹ \underline{200}$. If the brokerage rate is $0.3 \%$ then find the purchase value of the share. M.V. + Broker $=200+0.60=200.60$
2. A share is sold for the market value of $₹$ 1000. Brokerage is paid at the rate of $0.1 \%$. What is the amount received after the sale ?
3. Fill in the blanks given in the contract note of sale-purchase of shares.

4. Smut. Desai sold shares of face value ₹ 100 when the market value was ₹

HD 50 and received ₹ 4988.20. She paid brokerage $0.2 \%$ and GST on brokerage $18 \%$, then how many shares did she sell ? $50+100=150$
5. Mr. D'souza purchased 200 shares of FV ₹ 50 at a premium of $₹ 100$. He received $50 \%$ dividend on the shares. After receiving the dividend he sold 100 shares at a discount of ₹ 10 and remaining shares were sold at a premium of ₹ 75. For each trade he paid the brokerage of ₹ 20 . Find whether Mr.
D'souza gained or incurred a loss ? by how much ?

## Problem Set 4A

1. Write the correct alternative for each of the following.
(1) Rate of GST on essential commodities is ...
(A) $5 \%$
(B) $12 \%$
(C) $0 \%$
(D) $18 \%$
(2) The tax levied by the central government for trading within state is...
(A) IGST
(B) CGST
(C) SGT
(D) UTGST
(3) GST system was introduced in our country from ...
(A) $31^{\text {st }}$ M arch 2017
(B) $1^{\text {st }}$ A pril 2017
(C) $1^{\text {st }}$ January 2017
(D) $1^{\text {st }}$ July 2017
(4) The rate of GST on stainless steel utensils is $18 \%$, then the rate of State GST is . . .
(A) $18 \%$
(B) $9 \%$
(C) $36 \%$
(D) $0.9 \%$
(5) In the format of GSTIN there are ... alpha-numerals.
(A) 15
(B) 10
(C) 16
(D) 9
(6) W hen a registered dealer sells goods to another registered dealer under GST, then this trading is termed as ...
(A) BB
(B) B2B
(C) $B C$
(D) B2C
2. A dealer has given $10 \%$ discount on a showpiece of $₹ 25,000$. GST of $28 \%$ was charged on the discounted price. Find the total amount shown in the tax invoice. W hat is the amount of CGST and SGST ?
3. A ready-made garment shopkeeper gives $5 \%$ discount on the dress of ₹ 1000 and charges $5 \%$ GST on the remaining amount, then what is the purchase price of the dress for the customer?
4. A trader from Surat, Gujarat sold cotton clothes to a trader in Rajkot, Gujarat. The taxable value of cotton clothes is ₹ 2.5 lacs. W hat is the amount of GST at $5 \%$ paid by the trader in Rajkot?
5. Smt. M al hotra purchased solar panels for the taxable value of ₹ 85,000 . She sold them for ₹ 90,000 . The rate of GST is $5 \%$. Find the ITC of Smt. M alhotra. W hat is the amount of GST payable by her ?
6. A company provided Z -security services for the taxable value of ₹ 64,500 . Rate of GST is $18 \%$. Company had paid GST of ₹ 1550 for laundry services and uniforms etc. W hat is the amount of ITC (input Tax Credit) ? Find the amount of CGST and SGST payable by the company.
7. A dealer supplied Walky-Talky set of ₹ 84,000 (with GST) to police control room. Rate of GST is $12 \%$. Find the amount of state and central GST charged by the dealer. Also find the taxable value of the set.
8. A wholesaler purchased electric goods for the taxable amount of ₹ $1,50,000$. He sold it to the retailer for the taxable amount of ₹ $1,80,000$. Retailer sold it to the customer for the taxable amount of ₹ $2,20,000$. Rate of GST is $18 \%$. Show the computation of GST in tax invoices of sales. Also find the payable CGST and payable SGST for wholesaler and retailer.
9. A nna Patil (Thane, M aharashtra) supplied vacuum cleaner to a shopkeeper in V asai (M umbai) for the taxable value of ₹ 14,000 , and GST rate of $28 \%$. Shopkeeper sold it to the customer at the same GST rate for ₹ 16,800 (taxable value) Find the following -
(1) A mount of CGST and SGST shown in the tax invoice issued by A nna Patil.
(2) A mount of CGST and SGST charged by the shopkeeper in V asai.
(3) W hat is the CGST and SGST payable by shopkeeper in V asai at the time of filing the return.
$10^{\star}$. For the given trading chain prepare the tax invoice I, II, III. GST at the rate of $12 \%$ was charged for the article supplied.

(1) Prepare the statement of GST payable under each head by the wholesaler, distributor and retailer at the time of filing the return to the government.
(2) At the end what amount is paid by the consumer ?
(3) W rite which of the invoices issued are B2B and B2C ?

## Problem Set 4B

1. Write the correct alternative for the following questions.
(1) If the Face Value of a share is ₹ 100 and M arket value is ₹ 75 , then which of the following statements is correct ?
(A ) The share is at premium of ₹ 175
(B) The share is at discount of ₹ 25
(C) The share is at premium of ₹ 25
(D) The share is at discount of ₹ 75
(2) What is the amount of dividend received per share of face value ₹ 10 and dividend declared is $50 \%$.
(A) ₹ 50
(B) ₹ 5
(C) ₹ 500
(D) ₹ 100
(3) The NAV of a unit in mutual fund scheme is ₹ 10.65 then find the amount required to buy 500 such units.
(A) 5325
(B) 5235
(C) 532500
(D) 53250
(4) Rate of GST on brokerage is . . .
(A) $5 \%$
(B) $12 \%$
(C) $18 \%$
(D) $28 \%$
(5) To find the cost of one share at the time of buying the amount of Brokerage and GST is to be . . . the MV of share .
(A) added to
(B) substracted from
(C) Multiplied with
(D) divided by
2. Find the purchase price of a share of $\mathrm{FV} ₹ 100$ if it is at premium of $₹ 30$. The brokerage rate is $0.3 \%$.
3. Prashant bought 50 shares of FV ₹ 100, having MV ₹ 180. Company gave 40\% dividend on the shares. Find the rate of return on investment.
4. Find the amount received when 300 shares of $\mathrm{FV} ₹ 100$, were sold at a discount of ₹ 30 .
5. Find the number of shares received when ₹ 60,000 was invested in the shares of $F V$ ₹ 100 and M V ₹ 120 .
6. Smt. M ita A grawal invested ₹ 10,200 when M V of the share is ₹ 100 . She sold 60 shares when the MV was ₹ 125 and sold remaining shares when the M V was ₹ 90 . She paid $0.1 \%$ brokerage for each trading. Find whether she made profit or loss ? and how much?
7. $M$ arket value of shares and dividend declared by the two companies is given below. FaceV alueis same and it is₹ 100 for both the shares. Investment in which company is more profitable?
(1) Company A - ₹ 132 , 12\%
(2) Company B - ₹ 144, 16\%
8. Shri. A ditya Sanghavi invested ₹ 50,118 in shares of FV ₹ 100 , when the market value is ₹ 50. Rate of brokerage is $0.2 \%$ and Rate of GST on brokerage is $18 \%$, then How many shares were purchased for ₹ 50,118 ?
9. ${ }^{\star}$ Shri. Batliwala sold shares of ₹ 30,350 and purchased shares of ₹ 69,650 in a day. He paid brokerage at the rate of $0.1 \%$ on sale and purchase. $18 \%$ GST was charged on brokerage. Find his total expenditure on brokerage and tax.
10. . Smt. Aruna Thakkar purchased 100 shares of FV 100 when the MV is ₹ 1200. She paid brokerage at the rate of $0.3 \%$ and $18 \%$ GST on brokerage. Find the following -
(1) Net amount paid for 100 shares.
(2) Brokerage paid on sum invested.
(3) GST paid on brokerage.
(4) Total amount paid for 100 shares.
11. Smt. A nagha Doshi purchased 22 shares of FV ₹ 100 for Market Value of $₹ 660$. Find the sum invested. A fter taking $20 \%$ dividend, she sold all the shares when market value was ₹ 650 . She paid $0.1 \%$ brokerage for each trading done. Find the percent of profit or loss in the share trading. (Write your answer to the nearest integer.)

## 5 Probability

## Let's discuss.

Teacher : Friends, this box contains folded chits. The number of chits is exactly the same as the number of students in our class. Each student should pick one chit. Names of different plants are written on the chits. No two chits bear the same name of the plant. Let us see who gets the chit having the name 'B asil'. M ake a line in the order of your roll numbers. No one will unfold the chit until the last student takes his chit.
A runa: Sir, I am the first one in a line, but I do not want to pick a chit first, as the possibility of getting 'basil' chit from all the chits is very low.
Zarina : Sir, I am the last student in the row, I do not want to pick the chit at last as the chit containing the name 'basil' will most likely be picked up by some one else before my turn.
The first and the last student feel that for each of them, the possibility of getting the chit having the name 'basil' is very low. The above conversation indicates the thinking of less or more possibility.
W e use the following words to express the possibility in our daily conversation.

- Probable
- may be
- impossible
- sure
- nearly
- 50-50

Read the following statements regarding predictions (possibilities for the future).

- M ost probably the rain will start from today.
- The inflation is likely to rise.
- It is impossible to defeat Indian cricket team in the next match.
- I will surely get first class.
- There is no possibility of Polio infection if a child is given the polio vaccine in time.

The adjoining picture shows a 'toss' before a cricket match. What are the possibilities?

So here there are $\square$ possibilities.

Activity 1 : Let each student in the class toss a coin once. W hat will you get?
(Teacher writes the observations on the board in a table.)

| Possibilities | (H) | ( T) |
| :---: | :---: | :---: |
| Number of students | $\ldots$ | $\ldots$ |

Activity 2: A sk each student to toss the same coin twice. W hat are the possibilities?

| Possibilities | H H | HT | TH | TT |
| :---: | :---: | :---: | :---: | :---: |
| Number of students |  |  |  |  |

Activity 3: N ow throw a die, once. W hat arethe different possibilities of getting dots on the upper face?

Each of these is a possible result of throwing a die.

## Let's learn.

## Random Experiment

The experiment in which all possible results are known in advance but none of them can be predicted with certainty and there is equal possibility for each result is known as a 'Random experiment'.

For example, Tossing a coin, throwing a die, picking a card from a set of cards bearing numbers from 1 to 50 , picking a card from a pack of well shuffled playing cards, etc.

## Outcome

Result of a random experiment is known as an 'Outcome'.
Ex. (1) In a random experiment of tossing a coin - there are only two outcomes. Head (H) or Tail (T)
(2) In a random experiment of throwing a die, there are 6 outcomes, according to the number of dots on the six faces of the die. 1 or 2 or 3 or 4 or 5 or 6 .
(3) In a random experiment of picking a card bearing numbers from 1 to 50, there are 50 outcomes.
(4) A card is drawn randomly from a pack of well shuffled playing cards.

There are 52 cards in a pack as shown below.

13 heart cards
13 diamond cards

In a pack of playing cards there are 4 sets, namely heart, diamond, club and spade. In each set there are 13 cards as K ing, Queen, Jack, 10, 9, $8,7,6,5,4,3,2$ and $A$ ce.

King, Queen and Jack are known as face cards. In each pack of cards there are 4 cards of king, 4 cards of Queen and 4 cards of Jack. Thus total face cards are 12.

## Equally Likely Outcomes

If a die is thrown, any of the numbers from $1,2,3,4,5,6$ may appear on the upper face. It means that each number is equally likely to occur. However, if a die is so formed that a particular face come up most often, then that die is biased. In this case the outcomes are not likely to occur equally.

Here, we assume that objects used for random experiments are fair or unbiased.
A given number of outcomes are said to be equally likely if none of them occurs
in preferance to others. For example if a coin is tossed, possibilities of getting head or tail are equal. A die, having numbers from 1 to 6 on its different faces, is thrown. Check the possibility of getting one of the numbers. Here all the outcomes are eqully likely.

## Practice Set 5.1

1. How many possibilities are there in each of the following?
(1) V anita knows the following sites in M aharashtra. She is planning to visit one of them in her summer vacation.
Ajintha, Mahabaleshwar, Lonar Sarovar, Tadoba wild life sanctuary, A mboli, Raigad, M atheran, A nandavan.
(2) A ny day of a week is to be selected randomly.
(3) Select one card from the pack of 52 cards.
(4) O ne number from 10 to 20 is written on each card. Select one card randomly.

## Let's think.

In which of the following experiments possibility of expected outcome is more?
(1) Getting 1 on the upper face when a die is thrown.
(2) Getting head by tossing a coin.

## Let's learn.

## Sample Space

The set of all possible outcomes of a random experiment is called the sample space. It is denoted by ' S ' or ' $\Omega$ ' (A greek letter 'Omega'). Each element of sample space is called a 'sample point'. The number of elements in the set ' S ' is denoted by $\mathrm{n}(\mathrm{S})$. If $\mathrm{n}(\mathrm{S})$ is finite, then the sample space is said to be a finite sample space.

Following are some examples of finite sample spaces.

| $\begin{gathered} \text { S. } \\ \text { No. } \end{gathered}$ | Random experiment | Sample space | Number of sample points in S |
| :---: | :---: | :---: | :---: |
| 1 | One coin is tossed | S $=\{\mathrm{H}, \mathrm{T}$ ) | $\mathrm{n}(\mathrm{S})=2$ |
| 2 | Two coins are tossed | $\mathrm{S}=\{\mathrm{HH}, \mathrm{HT}, \mathrm{TH}, \mathrm{TT}\}$ | $n(S)=$ |
| 3 | Three coins are tossed | S = \{HHH, HHT, HTH, THH, HTT, THT, TTH, TTT\} | $\mathrm{n}(\mathrm{S})=8$ |
| 4 | A die is thrown | $S=\{1,2,3,4,5,6\}$ | $n(S)=$ |
| 5 | Two dice are thrown | $\begin{aligned} & S=\{(1,1),(1,2),(1,3),(1,4),(1,5),(1,6), \\ &(2,1),(2,2),(2,3),(2,4),(2,5),(2,6), \\ &(3,1),(3,2),(3,3),(3,4),(3,5),(3,6), \\ &(4,1),(4,2),(4,3),(4,4),(4,5),(4,6), \\ &(5,1),(5,2),(5,3),(5,4),(5,5),(5,6), \\ &(6,1),(6,2),(6,3),(6,4),(6,5),(6,6)\} \end{aligned}$ | $n(S)=36$ |
| 6 | A card is drawn from a pack bearing numbers from 1 to 25 | $\mathrm{S}=\{1,2,3,4, .$. .. ... .. .. .. .. ... .. .., 25\} | $n(S)=$ |
| 7 | A card is drawn fromawell shuffled pack of 52 playing cards. | Diamond: Ace, 2, 3, 4, 5, 6, 7, 8, 9, 10, Jack, Queen, King <br> Spade : A ce, 2, 3, 4, 5, 6, 7, 8, 9, 10, Jack, <br> Queen, K ing <br> Heart : Ace, 2, 3, 4, 5, 6, 7, 8, 9, 10, Jack, Queen, King <br> Club: Ace, 2, 3, 4, 5, 6, 7, 8, 9, 10, Jack, Queen, King | $n(S)=52$ |

## Let's remember!

(i) The sample space for a coin tossed twice is the same as that of two coins tossed simultaneously. The same is true for three coins.
(ii) The sample space for a die rolled twice is the same as two dice rolled simultaneously.

## Practice Set 5.2

(1) For each of the following experiments write sample space ' S ' and number of sample points $n(S)$.
(1) One coin and one die are thrown simultaneously.
(2) Two digit numbers are formed using digits 2, 3 and 5 without repeating a
digits.
2. The arrow is rotated and it stops randomly on the disc. Find out on which colour it may stop.

| MARCH -2019 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| M | T | W | T | F | S | S |
|  |  |  |  | 1 | 2 | 3 |
| 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 11 | 12 | 13 | 14 | 15 | 16 | 17 |
| 18 | 19 | 20 | 21 | 22 | 23 | 24 |
| 25 | 26 | 27 | 28 | 29 | 30 | 31 |

3. In the month of March 2019, find the days on which the date is a multiple of 5. (see the given page of the calender)
4. Form a 'Road safety commitee' of two, from 2 boys $\left(\mathrm{B}_{1}, \mathrm{~B}_{2}\right)$ and 2 girls $\left(\mathrm{G}_{1}, \mathrm{G}_{2}\right)$. Complete the following activity to write the sample space.
(a) Committee of 2 boys = $\square$ (b) Committee of 2 girls $=\square$
(c) Committee of one boy and one girl $=B_{1} G_{1}$ $\square$
$\square$
$\therefore$ Sample space $=\{$..., ..., ..., ..., ..., ... $\}$

## Let's learn.

## Event

The outcomes satisfying particular condition are called favourable outcomes.
A set of favourable outcomes of a given sample space is an 'event'. Event is a subset of the sample space.
Events are generally denoted by capital letters A , B , C, D etc. For example, if two coins are tossed and $A$ is the event of getting at least one tail, then the favourable outcomes are as follows.

$$
A=\{T T, T H, H T\} \quad S=\{(H H, H T, T H, T T\}
$$

The number of elements in the event $A$ is denoted by $n(A)$. Here $n(A)=3$.

## For more information

Types of event.
(i) Certain event/Sure event
(iv) Complement of an event
(ii) Impossible event
(v) M utually exclusive events
(iii) Simple/Elementary event
(vi) Exhaustive event

## SSDSSOlved Examples $\mathscr{S}$ S.

Ex. (1) Two coins are tossed simultaneously. W rite the sample space (S) and number of sample points $\mathrm{n}(\mathrm{S})$. Also write the following events in the set form and write the number of sample points in each event.
(i) Condition for event $A$ : to get at least one ta 1 f. head $\square$
(ii) Condition for event $B$ : to get only one head.
(iii) Condition for event C : to get at most one tail.
, ivy Condition for event D : to get no head.
Solution : If two coins are tossed simultaneously,
$\checkmark S=\{H H, H T, T H, T T\} \quad n(S)=4$
(i) Condition for event A : at least one head.
$\wedge=\{\underline{H} \dot{H}, \underline{H} \bar{T}, T \dot{H}\}$

$$
n(A)=3
$$

(ii) Condition for event B : only one head.

$$
B=\{\underline{H T, T H\}} \text { 苂 } \quad n(B)=2
$$

(iii) Condition for event C : at most one tail.

$$
C=\{\underline{H H}, \underline{H T}, \underline{T H}\} \underset{K}{T} \underline{T}(\mathrm{C})=3
$$

(iv) Condition for event $\mathrm{D}:$ No head.
$\checkmark \bar{D}=\{T T\}$
$n(D)=1$

Ex. (2) A bag contains 50 cards. Each card bears only one number from 1 to 50 . One card is drawn at randomfrom the bag. Write the sample space. Also write the events $\mathrm{A}, \mathrm{B}$ and find the number of sample points in them.
(i) Condition for event A : the number on the card is divisible by 6 .
(ii) Condition for event B : the number on the card is a complete square.

Solution: $S=\{1,2,3, \ldots 49,50\}, n(S)=50$
(i) Condition for event A : number is divisible by 6 .

$$
A=\{6,12,18,24,30,36,42,48\} \quad n(A)=8
$$

(ii) Condition for event B : the number on the card is a complete square.

$$
B=\{1,4,9,16,25,36,49\} \quad n(B)=7
$$

Ex. (3) A sanitation committee of 2 members is to be formed from 3 boys and 2 girls. W rite sample space 'S' and number of sample points n(S). A lso write the following events in set form and number of sample points in the event.
(i) Condition for event A : at least one girl must be a member of the committee.
(ii) Condition for event B : Committee must be of one boy and one girl.
(iii) Condition for event C : Committee must be of boys only.
(iv) Condition for event D : At the most one girl should be a member of the committee.

Solution : Suppose $B_{1}, B_{2}, B_{3}$ are three boys and $G_{1}, G_{2}$ are two girls
Out of these boys and girls, a sanitation committee of two members is to be formed.

$$
\therefore \mathrm{S}=\left\{\mathrm{B}_{1} \mathrm{~B}_{2}, \mathrm{~B}_{1} \mathrm{~B}_{3}, \mathrm{~B}_{2} \mathrm{~B}_{3}, \mathrm{~B}_{1} \mathrm{G}_{1}, \mathrm{~B}_{1} \mathrm{G}_{2}, \mathrm{~B}_{2} \mathrm{G}_{1}, \mathrm{~B}_{2} \mathrm{G}_{2}, \mathrm{~B}_{3} \mathrm{G}_{1}, \mathrm{~B}_{3} \mathrm{G}_{2}, \mathrm{G}_{1} \mathrm{G}_{2}\right\} \therefore \mathrm{n}(\mathrm{~S})=10
$$

(i) Condition for event $A$ is that at least one girl should be in the committee.

$$
A=\left\{B_{1} G_{1}, B_{1} G_{2}, B_{2} G_{1}, B_{2} G_{2}, B_{3} G_{1}, B_{3} G_{2}, G_{1} G_{2}\right\} \quad \therefore n(A)=7
$$

(ii) Condition for event B is that one boy and one girl should be there in the committee.

$$
B=\left\{B_{1} G_{1}, B_{1} G_{2}, B_{2} G_{1}, B_{2} G_{2}, B_{3} G_{1}, B_{3} G_{2}\right\} \quad \therefore n(B)=6
$$

(iii) Condition for event C is that there should be only boys in the committee.

$$
C=\left\{B_{1} B_{2}, B_{1} B_{3^{\prime}}, B_{2} B_{3}\right\} \quad n(C)=3
$$

(iv) Condition for event $D$ is that there can be at most one girl in the committee.

$$
D=\left\{B_{1} B_{2}, B_{1} B_{3}, B_{2} B_{3}, B_{1} G_{1}, B_{1} G_{2}, B_{2} G_{1}, B_{2} G_{2}, B_{3} G_{1}, B_{3} G_{2}\right\} \therefore n(D)=9
$$

Ex. (4) Two dice are rolled, write the sample space ' $S$ ' and number of sample points $n(S)$. A Iso write events and number of sample points in the event according to the given condition.
(i) Sum of the digits on upper face is a prime number.
(ii) Sum of the digits on the upper face is multiple of 5 .
(iii) Sum of the digits on the upper face is 25 .
(iv) Digit on the upper face of the first die is less than the digit on the second die.

Solution : Sample space,

$$
S=\{(1,1),(1,2),(1,3),(1,4),(1,5),(1,6),
$$

$$
\begin{aligned}
& (2,1),(2,2),(2,3),(2,4),(2,5),(2,6), \\
& (3,1),(3,2),(3,3),(3,4),(3,5),(3,6), \\
& (4,1),(4,2),(4,3),(4,4),(4,5),(4,6), \\
& (5,1),(5,2),(5,3),(5,4),(5,5),(5,6), \\
& (6,1),(6,2),(6,3),(6,4),(6,5),(6,6)\} \quad n(S)=36
\end{aligned}
$$

(i) Event E : The sum of the digits on the upper face is a prime number.

$$
\begin{aligned}
E=\{(1,1),(1,2),(1,4),(1,6),(2,1),(2,3), & (2,5),(3,2),(3,4), \\
& (4,1),(4,3),(5,2),(5,6),(6,1),(6,5)\} \quad \therefore n(E)=15
\end{aligned}
$$

(ii) Event F : The sum of the digits on the upper face is a multiple of 5 .

$$
F=\{(1,4),(2,3),(3,2),(4,1),(4,6),(5,5),(6,4)\} \quad \therefore n(F)=7
$$

(iii) Event G : The sum of the digits on the upper face is 25 .

$$
\mathrm{G}=\{ \}=\phi \quad \therefore \mathrm{n}(\mathrm{G})=0
$$

(iv) Event H : The number on upper face of first die is less than the digit on second die.

$$
\begin{aligned}
H=\{ & (1,2)(1,3)(1,4)(1,5)(1,6)(2,3)(2,4)(2,5)(2,6) \\
& (3,4)(3,5)(3,6)(4,5)(4,6)(5,6)\} \quad \therefore n(H)=15
\end{aligned}
$$

## Practice Set 5.3

1. W rite sample space ' $S$ ' and number of sample point $n(S)$ for each of the following experiments. Also write events $A, B, C$ in the set form and write $n(A), n(B), n(C)$. (H )One die is rolled, $S=\{1,2,3,4,5,6\} \quad \eta(S)=6$ Event $A$ : Even number on the upper face. $A=\{2,4,6), D(A) \equiv 3$ Event $B:$ Odd number on the upper face. $B=\{1,3,5\}, n(B)=3$
Event C : Prime number on the upper face. (2łT wo dice are rolled simultaneously,
$c=\{2,3,5\}, \eta(C)=3$
Event A : The sum of the digits on upper faces is a multiple of 6 .
Event B : The sum of the digits on the upper faces is minimum 10.
Event $C$ : The same digit on both the upper faces.

$$
\begin{aligned}
& s=\{H H H, H H T, H T T, H T H, T H T, T T H, T H H, \\
& n(s)=8
\end{aligned}
$$

(3) Three coins are tossed simultaneously.

Condition for event A: To get at least two heads. $A=\{$ HUH, HTH, HHS, THY \} ~
${ }^{2}$ Condition for event B: To get no head.
$n\left(A^{\prime}\right)=4$
Condition for event C: To get head on the second coin.
(4) Two digit numbers are formed using digits $0,1,2,3,4,5$ without repetition
of the digits. $S=\left\{10\left(12,13,1,1520,24,23, \frac{24}{4}, 25,30,31, \frac{32}{4}=, \frac{34}{4}, 35\right.\right.$
Condition for event $A$ : The number formed is even $n(A)=13$ Condition for event A: The number formed is even $40,41,42,43,45,50$ $\eta(B)=9$ Condition for event $B$ : The number formed is divisible $\overline{\overline{b y} 3} 3$.
(5) From three men and two women, environment committee of two persons is $=25$
to be formed. $S=$ ? $n(S)=2 \quad A=$ र
Condition for event A : There must be at least one woman member.
Condition for event B : One man, one woman committee to be formed.
Condition for event C : There should not be a woman member.
(6) One coin and one die are thrown simultaneously.

Condition for event A : To get head and an odd number.
Condition for event B : To get a head or tail and an even number.
Condition for event C: Number on the upper face is greater than 7 and tail on the coin.

## Let's learn.

## Probability of an event

Let us think of a simple experiment. A bag contains 4 balls of the same size. Three of them are white and the fourth is black. You are supposed to pick one ball at random without seeing it. Then obviously, possibility of getting a white ball is more.

In M athematical language, when possibility of an expected event is expressed in number, it is called 'Probability'. It is expressed as a fraction or percentage using the following formula.

For a random experiment, if sample space is ' S 'and ' A ' is an expected event then probability of ' A ' is $\mathrm{P}(\mathrm{A})$. It is given by following formula.

$$
P(A)=\frac{\text { Number of sample points in event } A}{\text { Number of sample points in sample spaces }}=\frac{n(A)}{n(S)}
$$

In the above experiment, getting a white ball is event A. As there are three white balls $n(A)=3$, As the number of balls is $4, n(S)=4$
$\therefore$ probability of getting a white ball is, $P(A)=\frac{n(A)}{n(S)}=\frac{3}{4}$.
Similarly, if getting black ball is event $B$, then $n(B)=1 \therefore P(B)=\frac{n(B)}{n(S)}=\frac{1}{4}$.

## SSOS Solved Examples SOSS

Ex. (1) Find the probability of the following, when one coin is tossed.
(i) getting head
(ii) getting tail

Solution : Let ' S ' be the sample space.

$$
S=\{H, T\} \quad n(S)=2
$$

(i) Let event $A$ be getting head

$$
\begin{aligned}
& A=\{H\} \quad \therefore n(A)=1 \\
& P(A)=\frac{n(A)}{n(S)}=\frac{1}{2}
\end{aligned}
$$

(ii) Let event $B$ be getting tail

$$
\begin{aligned}
& B=\{T\} \quad \therefore n(B)=1 \\
& P(B)=\frac{n(B)}{n(S)}=\frac{1}{2}
\end{aligned}
$$

Ex. (2) If one die is rolled then find the probability of each of the following events.
(i) Number on the upper face is prime
(ii) Number on the upper face is even.

Solution: ' S ' is the sample space.

$$
S=\{1,2,3,4,5,6\} \quad \therefore n(S)=6
$$

(i) Event A: Prime number on the upper face.

$$
\begin{aligned}
& A=\{2,3,5\} \quad \therefore \mathrm{n}(\mathrm{~A})=3 \\
& \quad P(A)=\frac{\mathrm{n}(\mathrm{~A})}{\mathrm{n}(\mathrm{~S})} \\
& \therefore P(A)=\frac{3}{6}=\frac{1}{2}
\end{aligned}
$$

(ii) Event B : Even number on the upper face.

$$
\begin{aligned}
& B=\{2,4,6\} \quad \therefore n(B)=3 \\
& P(B)=\frac{n(B)}{n(S)} \\
& \therefore P(B)=\frac{3}{6}=\frac{1}{2}
\end{aligned}
$$

Ex. (3) A card is drawn from a well shuffled pack of 52 playing cards. Find the probability of each event. The card drawn is (i) a red card
(ii) a face card

Solution: ' S ' is the sample space.

$$
\therefore \mathrm{n}(\mathrm{~S})=52
$$

Event A : Card drawn is a red card.
Total red cards $=13$ hearts +13 diamonds $=26$
$\therefore \mathrm{n}(\mathrm{A})=26$
$\therefore P(A)=\frac{n(A)}{n(S)}=\frac{26}{52}=\frac{1}{2}$
Event B : Card drawn is a face card.
Total face cards $=12 \quad \therefore n(B)=12$
$\therefore \mathrm{P}(\mathrm{B})=\frac{\mathrm{n}(\mathrm{B})}{\mathrm{n}(\mathrm{S})}=\frac{12}{52}=\frac{3}{13}$
Ex. (4) A box contains 5 strawberry chocolates, 6 coffee chocolates and 2 peppermint chocolates. Find the probability of each of the following events, if one of the chocolates is picked from the box at random. (i) it is a coffee chocolate.
(ii) it is a peppermint chocolate.

Solution : Sample space is ' S ' and $\mathrm{n}(\mathrm{S})=5+6+2=13$

Event A : it is a coffee chocolate
$\therefore \quad n(A)=6$
$\therefore \quad P(A)=\frac{n(A)}{n(S)}=\frac{6}{13}$

Event B : it is a peppermint chocolate
$\therefore \quad n(B)=2$
$\therefore \quad P(B)=\frac{n(B)}{n(S)}=\frac{2}{13}$

## Let's remember!

- The Probability is expressed as a fraction or a percentage.
- The probability of any event is from 0 to 1 or $0 \%$ to $100 \%$.

If $E$ is any event, $0 \leq P(E) \leq 1$ or $0 \% \leq P(E) \leq 100 \%$.
e.g. probability $\frac{1}{4}$ is written as $25 \%$.

- This lesson began with a discussion of 40 chits with names of plants and each of 40 students picking a chit. Only one chit had the name B asil on it. The probability of any student getting the chit of Basil is $\frac{1}{40}$. For a student standing first or last in the row, or anywhere in between, the probability is the same.

## Practice Set 5.4

1. If two coins are tossed, find the probability of the following events.
(1) Getting at least one head.
(2) Getting no head.
2. If two dice are rolled simultaneously, find the probability of the following events.
(1) The sum of the digits on the upper faces is at least 10 .
(2) The sum of the digits on the upper faces is 33 .
(3) The digit on the first die is greater than the digit on second die.

There are 15 tickets in a box, each bearing one of the numbers from 1 to 15 . One ticket is drawn at random from the box. Find the probability of event that the 1 $\begin{array}{ll}\text { ticket drawn- } & B=\{5,10,15\} \quad \overline{P(B)=\frac{n(B)}{n(S)}}=\frac{3}{15}=\frac{1}{5} \\ \text { (1) shows an even number. By } 2 \text { (2) shows a number which is a multiple of 5. }\end{array}$

H2 (2) shows a number which is a multiple of 5. 5
A two digit number is formed with digits 2, 3, 5, 7, 9 without repetition. $W$ hat is the probability that the number formed is
(1) an odd number ?

2) a multiple of 5 ?

A card is drawn at random from a pack of well shuffled 52 playing cards. Find the probability that the card drawn is (1) an ace.

## (Aw) Problem Set 5

1. Choose the correct alternative answer for each of the following questions.
(1) W hich number cannot represent a probability ?
(A) $\frac{2}{3}$
(B) 1.5
(C) $15 \%$
D) 0.7
(2) A die is rolled. W hat is the probability that the number appearing on upper face is less than 3 ?
(A) $\frac{1}{6}$
(B) $\frac{1}{3}$
(C) $\frac{1}{2}$
D) 0
(3) W hat is the probability of the event that a number chosen from 1 to 100 is a prime number?
(A) $\frac{1}{5}$
(B) $\frac{6}{25}$
(C) $\frac{1}{4}$
D) $\frac{13}{50}$
(4) There are 40 cards in a bag. Each bears a number from 1 to 40 . $O$ ne card is drawn at random. What is the probability that the card bears a number which is a multiple of 5 ?
(A) $\frac{1}{5}$
(B) $\frac{3}{5}$
(C) $\frac{4}{5}$
D) $\frac{1}{3}$
(5) If $n(A)=2, P(A)=\frac{1}{5}$, then $n(S)=$ ?
(A) 10
(B) $\frac{5}{2}$
(C) $\frac{2}{5}$
D) $\frac{1}{3}$
2. Basketball players John, Vasim, A kash were practising the ball drop in the basket. The probabilities of success for John, Vasim and A kash are $\frac{4}{5}, 0.83$ and $58 \%$ respectively. Who had the greatest probability of success?
3. In a hockey team there are 6 defenders, 4 offenders and 1 goalee. Out of these, one player is to be selected randomly as a captain. Find the probability of the selection that -
(1) The goalee will be selected.
(2) A defender will be selected.
4. Joseph kept 26 cards in a cap, bearing one English alphabet on each card. One card is drawn at random. W hat is the probability that the card drawn is a vowel card?
5. A balloon vendor has 2 red, 3 blue and 4 green balloons. He wants to choose one of them at random to give it to Pranali. W hat is the probability of the event that Pranali gets,
(1) a red balloon
(2) a blue balloon
(3) a green balloon.
6. A box contains 5 red, 8 blue and 3 green pens. Rutuja wants to pick a pen at random. W hat is the probability that the pen is blue?
7. Six faces of a die are as shown below.

If the die is rolled once, find the probability of -
(1) 'A' appears on upper face.
(2) ' $D$ ' appears on upper face.
8. A box contains 30 tickets, bearing only one number from 1 to 30 on each. If one ticket is drawn at random, find the probability of an event that the ticket drawn bears (1) an odd number (2) a complete square number.
9. Length and breadth of a rectangular garden are 77 m and 50 m . There is a circular lake in the garden having diameter 14 m . Due to wind, a towel from a terrace on a nearby building fell into the garden. Then find the probability of the event that it fell in the lake.
10. In a game of chance, a spinning arrow comes to rest at one of the numbers $1,2,3,4,5,6,7,8$.
All these are equally likely outcomes.
Find the probability that it will rest at
(1) 8.
(2) an odd number.

(3) a number greater than 2.
(4) a number less than 9 .
11. There are six cards in a box, each bearing a number from 0 to 5 . Find the probability of each of the following events, that a card drawn shows,
(1) a natural number.
(2) a number less than 1.
(3) a whole number.
(4) a number is greater than 5 .
12. A bag contains 3 red, 3 white and 3 green balls. One ball is taken out of the bag at random. W hat is the probability that the ball drawn is -
(1) red.
(2) not red
(3) either red or white.
13. Each card bears one letter from the word 'mathematics' The cards are placed on a table upside down. Find the probability that a card drawn bears the letter ' $m$ '.
14. Out of 200 students from a school, 135 like K abbaddi and the remaining students do not like the game. If one student is selected at random from all the students, find the probability that the student selected dosen't like K abbaddi.
15. A two digit number is to be formed from the digits $0,1,2,3,4$. Repetition of the digits is allowed. Find the probability that the number so formed is a -
(1) prime number
(2) multiple of 4
(3) multiple of 11.
16. The faces of a die bear numbers $0,1,2,3,4,5$. If the die is rolled twice, then find the probability that the product of digits on the upper face is zero.
17. Do the following activity -

Activity I: Total number of students in your class, $n(S)=$ $\square$ Number of students from your class, wearing spectacles, $n(A)=\square$
Probability of a randomly selected student wearing spectacles, $P(A)=\square$
Probability of a randomly selected student not wearing spectacles, $P(B)=\square$
Activity II : Decide the sample space yourself and fill in the following boxes.

$\therefore \mathrm{P}(\mathrm{A})=\frac{\square}{\square}=\square$

- M easures of a central tendency-
mean, median and mode from grouped frequency table.
- Graphical representation of statistical data -
histogram, frequency polygon, pie diagram
Statistics is useful in many fields of life: for example, agriculture, economics, commerce, medicine, botany, biotechnology, physics, chemistry, education, sociology, administration etc. An experiment can have many outcomes. To assess the possibility of possible outcomes, one has to carry out the experiment on a large scale and keep the record meticulously. Possibilities of different outcomes can be assessed using the record. For this purpose, rules are formulated in statistics.

Francis Galton (1822-1911) has done much of fundamental work in statistics. H e used to prepare questionnaires, di stribute them among people and request them to fill them up. He collected information from a number of people and recorded their backgrounds, financial situations, likes and dislikes, health etc. on a large scale. By that time, it was known that the fingerprints of different people are different. He collected finger-prints of a large number of people and invented a method of their

FrancisGalton classification. Using statistical methods, he showed that the possibility of finger prints of two different people being identical is nearly zero. This result made it possible to identify a person from his finger-prints. This method of identifying criminals was accepted in the judiciary. He had done much work in the field of anthropology of humans and other animals also.

## Let's recall.

We usually find a specific property in the numerical data collected in a survey that the scores have a tendency to cluster around a particular score. This score is a representative number of the group. The number is called the measure of central tendency.

In the previous standards we have studied the measures of central tendency, namely the mean, median and mode, for ungrouped data.

Activity 1 : M easure the height in cm of all students in your class. We find that the heights of many students cluster near a specific number.

Activity 2 : Collect a number of fallen leaves of a peepal tree. Distribute the leaves among the students and ask them to measure the lengths of them. Record the lengths. W e notice that their lengths tend to cluster around a number.

Now we are going to do some more study of the mean, median and mode. Let us know the symbols and the terminology required for it.

The mean of statistical data $=\frac{\text { The sum of all scores }}{\text { Total no. of scores }}=\frac{\sum_{i=1}^{N} x_{i}}{N}$
(Here $\mathrm{X}_{\mathrm{i}}$ is the $\mathrm{i}^{\text {th }}$ score)
$M$ ean is denoted by $\overline{\mathrm{X}}$ and it represents the average of the given data.
$\bar{X}=\frac{\sum_{i=1}^{N} x_{i}}{N}$

## Let's learn.

## Mean from classified frequency distribution

W hen the number of scores in a data is large, it becomes tedious to write all numbers in the above formula and take their sum. So we use some different methods to find the sum.

Sometimes, the large data collected from an experiment is presented in a table in the grouped form. In such a case, we cannot find the exact mean of statistical data. Hence, let us study a method which gives the approximate mean, or a number nearby.

## Direct method

Let us study the method by an example.
Ex. : The following table shows the frequency distribution of the time required for each worker to complete a work. From the table find the mean time required to complete the job for a worker.

| Time (H rs.) for each to complete the work | $15-19$ | $20-24$ | $25-29$ | $30-34$ | $35-39$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| N o. of workers | 10 | 15 | 12 | 8 | 5 |

Solution :
(1) Vertical columns are drawn as shown in the table.
(2) Classes are written in the first column.
(3) Theclass mark $X_{i}$ is in the second column.
(4) In the third column, the number of workers, that is frequency $\left(f_{i}\right)$ is written.
(5) In the fourth column, the product $\left(X_{i} \times f_{i}\right)$ for each class is written.
(6) Then $\sum_{i=1}^{N} X_{i} f_{i}$ is written.
(7) The mean is found using the

| Class <br> (Timehours) | $\begin{gathered} \text { Class } \\ \text { mark } \\ x_{i} \end{gathered}$ | Frequency (No. of W orkers) $\Omega f_{i}$ | $\begin{gathered} \text { Class mark } \times \\ \text { Frequency } \\ x_{i} f_{i} \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| 15-19 | 17 | 10 | 170 |
| 20-24 | 22 | $\times 15$ | $330$ |
| 25-29 | 27 | $x+12$ | $T_{324}$ |
| 30-34 | 32 | $x 8$ | $256$ |
| 35-39 | 37 | $x^{+5}$ | $=185$ |
| Total |  | $\sum \mathrm{f}_{\mathrm{i}}=50$ | $\begin{gathered} \sum \mathrm{X}_{\mathrm{i}} \mathrm{f}_{\mathrm{i}}= \\ 1265 \end{gathered}$ | formula

M ean $=\bar{X}=\frac{\sum x_{i} f_{i}}{N}=\frac{1265}{50}=\underline{25.3} \because \sum f_{i}=N$
The mean time required to complete the work for a worker $=25.3 \mathrm{hrs}$. (A pprox)

## SSS\& Solved Examples $\mathscr{S}$ S.

Ex. (1) The percentage of marks of 50 students in a test is given in the following table. Find the mean of the percentage.

| Percentage of marks | $0-20$ | $20-40$ | $40-60$ | $60-80$ | $80-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| N N. of students | 3 | 7 | 15 | 20 | 5 |

Solution : The following table is prepared as per steps.

| $0+20$ | Class <br> (Percentage of marks) | Class <br> mark <br> $X_{i}$ | Frequency <br> (No. of students) $\mathrm{f}_{\mathrm{i}}$ | Class mark $x$ frequency $x_{i} f_{i}$ | $\begin{aligned} \overline{\mathrm{X}} & =\frac{\sum \mathrm{x}_{\mathrm{i}} \mathrm{f}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}} \\ & =\frac{2840}{50} \\ & =56.8 \\ \therefore & \text { Themean of } \end{aligned}$ the percentage$=56.8$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{r} 2 \\ =\frac{10}{20} \\ 1 \end{array}$ | $\begin{gathered} \frac{0-20}{20-40} \\ 40-60 \\ 60-80 \\ 80-100 \end{gathered}$ | $\begin{aligned} & \rightarrow 10 \\ & \rightarrow 30 \\ & \rightarrow \end{aligned}{ }^{7} 0$ |  | $\begin{aligned} & +30 \\ & +210 \\ & +750 \\ & +1400 \\ & +\quad 450 \end{aligned}$ |  |
|  | Total |  | $\mathrm{N}=\sum \mathrm{f}_{\mathrm{i}}=50$ | $\sum \mathrm{X}_{\mathrm{i}} \mathrm{f}_{\mathrm{i}}=\underline{2840}$ |  |

Ex. (2) The maximum temperatures in ${ }^{\circ} \mathrm{C}$ of 30 towns, in the last summer, is shown in the following table. Find the mean of the maximum temperatures.

| M ax. temp. | $24-28$ | $28-32$ | $32-36$ | $36-40$ | $40-44$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| No. of towns | 4 | 5 | 7 | 8 | 6 |

## Solution :

| Class <br> $\left(\right.$ Temp. ${ }^{\circ} \mathrm{C}$ ) | Class mark <br> $\mathrm{X}_{\mathrm{i}}$ | Frequency <br> (No. of towns) <br> $\mathrm{f}_{\mathrm{i}}$ | Class mark $\times$ <br> frequency <br> $\mathrm{X}_{\mathrm{i}} \mathrm{f}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| $24-28$ | 26 | 4 | 104 |
| $28-32$ | 30 | 5 | 150 |
| $32-36$ | 34 | 7 | 238 |
| $36-40$ | 38 | 8 | 304 |
| $40-44$ | 42 | 6 | 252 |
| Total |  | $\mathrm{N}=\sum \mathrm{f}_{\mathrm{i}}=30$ | $\sum \mathrm{x}_{\mathrm{i}} \mathrm{f}_{\mathrm{i}}=1048$ |

$M$ ean $=\bar{X}=\frac{\sum x_{i} f_{i}}{\sum f_{i}}=\frac{1048}{30}=34.9^{\circ} \mathrm{C}$

## Assumed mean method

In the examples solved above, we see that some times the product $X_{i} f_{i}$ is large. Hence it becomes difficult to calculate the mean by direct method. So let us study another method, called the 'assumed mean method'. Finding the mean becomes simpler if we use addition and division in this method.

For example, we have to find the mean of the scores $40,42,43,45,47$ and 48.
The obeservation of the scores reveals that the mean of the data is more than 40. So let us assume that the mean is $40.40-40=0,42-40=2,43-40=3$, $45-40=5,47-40=7,48-40=8$ These are called 'deviations'. Let us find their mean. A dding this mean to the assumed mean, we get the mean of the data.

That is, mean $=$ assumed mean + mean of the deviations

$$
\bar{X}=40+\left(\frac{0+2+3+5+7+8}{6}\right)=40+\frac{25}{6}=40+4 \frac{1}{6}=44 \frac{1}{6}
$$

Using the symbols-
A- for assumed mean; $d$ - for deviation and $\bar{d}$ - for the mean of the deviations, the formula for mean of the given data can be briefly written as $\bar{X}=A+\bar{d}$. Let us solve the same example taking 43 as assumed mean. For this, let us find the deviations by subtracting 43 from each score.

$$
40-43=-3,42-43=-1,43-43=0,45-43=2,47-43=4,48-43=5
$$

The sum of the deviations $=-3-1+0+2+4+5=7$
Now, $\bar{X}=A+\bar{d}$

$$
\begin{aligned}
& =43+\left(\frac{7}{6}\right) \quad(\text { as the number of deviations is } 6) \\
& =43+1 \frac{1}{6}=44 \frac{1}{6}
\end{aligned}
$$

Note that; use of assumed mean method reduces the work of calculations.
A lso note that; taking any score, or any other convenient number as asssumed mean does not change the mean of the data.

Ex. : The daily sale of 100 vegetable vendors is given in the following table. Find the mean of the sale by assumed mean method.

| Daily sale (Rupees) | $1000-1500$ | $1500-2000$ | $2000-2500$ | $2500-3000$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of vendors | 15 | 20 | 35 | 30 |

Solution : A ssumed mean $=A=2250, d_{i}=\underline{x}_{i}-A$ is the deviation.

|  | Class <br> Daily sale (Rupees) | Class mark $\mathrm{X}_{\mathrm{i}}$ | $\frac{d_{i}=x_{i}-A}{=x_{i}-2250}$ | Frequency ( N o. of vendors) $\mathrm{f}_{\mathrm{i}}$ | Frequency $\times$ deviation $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $=\frac{25}{2}$ | $\begin{aligned} & 1000-1500 \rightarrow \\ & 1500-2000 \longrightarrow \\ & 2000-2500 \rightarrow \\ & 2500-3000 \rightarrow \end{aligned}$ | $\xrightarrow[\underset{\sim}{2250 \rightarrow A}]{\frac{1250}{\underline{1750}}}$ | $\begin{array}{r} \rightarrow-\frac{-1000}{-500} \\ \rightarrow 0 \\ \rightarrow 500 \end{array}$ | $\begin{aligned} & x+15= \\ & x+20 \\ & x+35 \\ & x+30 \end{aligned}=$ | $\begin{aligned} & \begin{array}{c} -15000 \\ + \\ = \\ = \\ = \\ = \\ \\ +_{15000} \end{array} \end{aligned}$ |
|  | Total |  |  | $\mathrm{N}=\sum \mathrm{f}_{\mathrm{i}}=\underline{100}$ | $\sum f_{i} d_{i}=-10000$ |

The table is prepared according to the following steps :-
(1) A ssumed mean, A is choosen as 2250. (Generally, the class mark of the class having maximum frequency is chosen as the assumed mean.)
(2) Classes of sale are written in the first column.
(3) Class marks are written in the second column.
(4) $V$ alues of $d_{i}=X_{i}-A=X_{i}-2250$ are written in the third column.
(5) In the fourth column, the number of vendors and their sum is written as $\sum f_{i}$.
(6) In the fifth column, the product $\left(f_{i} \times d_{i}\right)$ and their sum is written as $\sum f_{i} d_{i}$. $\overline{\mathrm{d}}$ and $\overline{\mathrm{X}}$ are calculated using the formulae.

$$
\begin{aligned}
& \overline{\mathrm{d}}=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{~d}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=-\frac{10000}{100}=-100 \therefore \text { mean } \overline{\mathrm{X}}=\mathrm{A}+\overline{\mathrm{d}}=2250-100=2150 \\
& \text { The mean of sale is } ₹ 2150 .
\end{aligned}
$$

Activity :- Solve the above example by direct method.

## S\&\& Solved Examples © © S

Ex. (1) The following table shows the frequency table of daily wages of 50 workers in a trading company. Find the mean wages of a worker, by assumed mean method.

| Daily W ages <br> (Rs) | $200-240$ | $240-280$ | $280-320$ | $320-360$ | $360-400$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency <br> (N o. of workers) | 5 | 10 | 15 | 12 | 8 |

Solution : Let us take the assumed mean $\mathrm{A}=300$.

| Class <br> ( $₹$ Wage) | Class <br> mark <br> $\mathrm{X}_{\mathrm{i}}$ | $\mathrm{d}_{\mathrm{i}}=\mathrm{X}_{\mathrm{i}}-\mathrm{A}$ <br> $\mathrm{d}_{\mathrm{i}}=\mathrm{x}_{\mathrm{i}}-300$ | Frequency <br> (No. of workers) <br> $\mathrm{f}_{\mathrm{i}}$ | Frequency $\times$ <br> Deviation <br> $\mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: |
| $200-240$ | 220 | -80 | 5 | -400 |
| $240-280$ | 260 | -40 | 10 | -400 |
| $280-320$ | $300 \rightarrow \mathrm{~A}$ | 0 | 15 | 0 |
| $320-360$ | 340 | 40 | 12 | 480 |
| $360-400$ | 380 | 80 | 8 | 640 |
| Total |  |  | $\sum \mathrm{f}_{\mathrm{i}}=50$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}=320$ |

$$
\begin{aligned}
\bar{d} & =\frac{\sum f_{i} d_{i}}{\sum f_{i}}=\frac{320}{50}=6.4 \\
\text { M ean, } & \bar{X}=A+\bar{d} \\
& =300+6.4 \\
& =306.40
\end{aligned}
$$

The mean of daily wages $=306.40$ ₹

## Step deviation method

W e studied the direct method and assumed mean method to find the mean. Now we study one more method which reduces the calculations still further.

- Find the values of $d_{i}$ as $d_{i}=x_{i}-A$ and write in the column.
- If we can find $g$, the G.C.D. of all $d_{i}$ easily, we create a column for all $u_{i}$ where $u_{i}=\frac{d_{i}}{g}$
- Find the mean $\bar{u}$ of all $u_{i}$.
- Using the formula $\bar{X}=A+\bar{u} g$, find the mean of the data.

Example : The amount invested in health insurance by 100 families is given in the following frequency table. Find the mean of investments using step deviation method.

| A mount <br> invested <br> (₹) | $800-1200$ | $1200-1600$ | $1600-2000$ | $2000-2400$ | $2400-2800$ | $2800-3200$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> families | 3 | 15 | 20 | 25 | 30 | 7 |

Solution : A ssumed mean A $=2200$ observing all ' $\mathrm{d}_{\mathrm{i}}$ 's $g=400$.

| $\begin{gathered} \text { Class } \\ \text { (Insurance ₹) } \end{gathered}$ | Class <br> M ark <br> $X_{i}$ | $\begin{aligned} & d_{i}=x_{i}-A \\ & =x_{i}-2200 \end{aligned}$ | $u_{i}=\frac{d_{i}}{g}$ | Frequency (No. of families) $f_{i}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 800-1200 | 1000 | -1200 | -3 | 3 | -9 |
| 1200-1600 | 1400 | -800 | -2 | 15 | -30 |
| 1600-2000 | 1800 | -400 | -1 | 20 | -20 |
| 2000-2400 | $2200 \rightarrow$ A | 0 | 0 | 25 | 0 |
| 2400-2800 | 2600 | 400 | 1 | 30 | 30 |
| 2800-3200 | 3000 | 800 | 2 | 7 | 14 |
| Total |  |  |  | $\sum \mathrm{f}_{\mathrm{i}}=100$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=-15$ |

The above table is made using the following steps.
(1) The classes of investment are written in the first column.
(2) The values of $X_{i}$ are written in the second column.
(3) The values of $d_{i}=x_{i}-A$ are written in the third column.
(4) The G.C.D of all values of $d_{i}$ is 400 . Therefore $\mathscr{g}=400$.
(5) The corresponding frequencies are written in the fifth column.
(6) The product $f_{i} \times u_{i}$ for each class is written in the sixth column.

The mean of $u_{i}$ is found by the following formula.

$$
\begin{aligned}
& \bar{u}=\frac{\sum f_{i} u_{i}}{\sum f_{i}}=\frac{-15}{100}=-0.15 \\
\bar{X} & =A+\bar{u} g \\
= & 2200+(-0.15)(400) \\
= & 2200+(-60.00) \\
= & 2200-60=2140
\end{aligned}
$$

$\therefore$ The mean of investments in health insurance $=₹ 2140$.
Activity : Solve the above example by direct method and by assumed mean method and see that the mean found by any method is the same.

## S\&\&S Solved Example \&\&\&

Ex. (1) The following table shows the funds collected by 50 students for flood affected people. Find the mean of the funds.

| Fund <br> (R upees) | $0-500$ | $500-1000$ | $1000-1500$ | $1500-2000$ | $2000-2500$ | $2500-3000$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> students | 2 | 4 | 24 | 18 | 1 | 1 |

If the number of scores in two consecutive classes is very low, it is convenient to club them. So, in the above example, we club the classes $0-500,500-1000$ and 2000-2500, 2500-3000. Now the new table is as follows

| Fund (Rupees) | $0-1000$ | $1000-1500$ | $1500-2000$ | $2000-3000$ |
| :---: | :---: | :---: | :---: | :---: |
| N o. of students | 6 | 24 | 18 | 2 |

Solution: Let $\mathrm{A}=1250$, examining all $\mathrm{d}_{\mathrm{i}}, g=250$.

| Class <br> Fund (₹) | Class mark <br> $x_{i}$ | $d_{i}=x_{i}-A$ <br> $=x_{i}-1250$ | $u_{i}=\frac{d_{i}}{g}$ | Frequency <br> $f_{i}$ | $\mathrm{f}_{\mathrm{i}} u_{i}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0-1000$ | 500 | -750 | -3 | 6 | -18 |
| $1000-1500$ | $1250 \rightarrow A$ | 0 | 0 | 24 | 0 |
| $1500-2000$ | 1750 | 500 | 2 | 18 | 36 |
| $2000-3000$ | 2500 | 1250 | 5 | 2 | 10 |
| Total |  |  |  | $\sum \mathrm{f}_{\mathrm{i}}=50$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=28$ |

$$
\bar{u}=\frac{\sum f_{i} u_{i}}{\sum f_{i}}=\frac{28}{50}=0.56
$$

$\bar{u} g=0.56 \times 250=140$

$$
\overline{\mathrm{X}}=\mathrm{A}+\mathscr{V} \overline{\mathrm{U}}=\quad 1250+140=1390
$$

$\therefore$ the average of the funds is ₹ 1390 .

## Activity -

1. Solve the above example by direct method.
2. Verify that the mean calculated by assumed mean method is the same.
3. Find the mean in the above example by taking $\mathrm{A}=1750$.

## Practice Set 6.1

1. The following table shows the number of students and the time they utilized daily for their studies. Find the mean time spent by students for their studies by direct method.

| Time (hrs.) | $0-2$ | $2-4$ | $4-6$ | $6-8$ | $8-10$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 7 | 18 | 12 | 10 | 3 |

2. In the following table, the toll paid by drivers and the number of vehicles is shown. Find the mean of the toll by 'assumed mean' method.

| Toll (R upees) | $300-400$ | $400-500$ | $500-600$ | $600-700$ | $700-800$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of vehicles | 80 | 110 | 120 | 70 | 40 |

3. A milk centre sold milk to 50 customers. The table below gives the number of customers and the milk they purchased. Find the mean of the milk sold by direct method.

| M ilk Sold (Litre) | $1-2$ | $2-3$ | $3-4$ | $4-5$ | $5-6$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of Customers | 17 | 13 | 10 | 7 | 3 |

4. A frequency distribution table for the production of oranges of some farm owners is given below. Find the mean production of oranges by 'assumed mean' method.

| (i)Production <br> (Thousand rupees) | $25-30$ | $30-35$ | $35-40$ | $40-45$ | $45-50$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of farm owners | 20 | 25 | 15 | 10 | 10 |

5. A frequency distribution of funds collected by 120 workers in a company for the drought affected people are given in the following table. Find the mean of the funds by 'step deviation' method.

| Fund (Rupees) | $0-500$ | $500-1000$ | $1000-1500$ | $1500-2000$ | $2000-2500$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| No. of workers | 35 | 28 | 32 | 15 | 10 |

196. The following table gives the information of frequency distribution of weekly wages of 150 workers of a company. Find the mean of the weekly wages by 'step deviation' method.

| W eekly wages (R upees) | $1000-2000$ | $2000-3000$ | $3000-4000$ | $4000-5000$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of workers. | 25 | 45 | 50 | 30 |

## Let's recall.

There was a science exhibition in a city for two days. A school sent two boys and two girls to participate in the exhibition. There were ten hotels, within a distance of one kilometer, from the venue of exhibition. Their rates of meals, in the ascending order were rupees $40,45,60,65,70,80,90,100$ and 500 . They had to choose one of them for the dinner.

The average of rates in all the hotels was ₹ $\frac{1130}{10}=113$.
Which hotel do you think they chose? Except the rate ₹ 500, all others were less than ₹ 113 . The students decided to choose a hotel having medium rate. The first day they chose the hotel with rate ₹ 70 and on the next day, the hotel with the rate ₹ $80 /$-.

This example shows that sometimes the median is used instead of the mean.
In the previous standard we have studied the concept of a median.

- If the numbers in a data are arranged in the ascending order, the number at the middle position is called the median of the data.
- The median divides the array of numbers in two equal parts, that is the number of scores below and above the median is equal.
- The scores are written as $k_{1} \leq k_{2} \leq k_{3} \ldots \ldots \leq k_{n}$.
- If the number of scores is odd, then the $\frac{n+1}{2}$ th score is the median of the data. That is, the number of scores below as well as above $\mathrm{k}_{\frac{n+1}{2}}$ is $\frac{n-1}{2}$; verify the fact by taking $n=2 m+1$.
- If the number of the scores is even, then the mean of the middle two terms is the median. This is because the number of terms below $k_{\frac{n}{2}}$ and above $k_{\frac{n+2}{2}}$ is equal, which is $\frac{n-2}{2}$. Verify this by taking $n=2 m$.
- Hence the mean of $\frac{n}{2}$ th and $\frac{n+2}{2}$ th term is the median of the data.

Ex. (1) In $32,33,38,40,43,48,50$; the fourth number is at the middle. Hence the median of the data is 40

Ex. (2) In $61,62,65,66,68,70,74,75$; the number of scores is 8 , that is even. Therefore, the fourth and the fifth numbers are at the middle, which are 66 and 68. Hence the median $=\frac{66+68}{2}=67$

## Let's learn.

## Median for grouped frequency distribution

W hen the number of scores in a data is large, it is difficult to arrange them in ascending order. In such case, the data is divided into groups. So let us study, with an example, how the median of grouped data is found.
Ex. The scores $6,8,10.4,11,15.5,12,18$ are grouped in the following table.

| Class | Tally M arks | Frequency |
| :---: | :---: | :---: |
| $6-10$ | ॥ | 2 |
| $11-15$ | ॥ | 2 |
| $16-20$ | । | 1 |

| Class | Tally M arks | Frequency |
| :---: | :---: | :---: |
| $5.5-10.5$ | $॥$ II | 3 |
| $10.5-15.5$ | ॥ | 2 |
| $15.5-20.5$ | ॥ | 2 |

We could not record the scores 10.4 and 15.5 in the first table, as they cannot be placed in any of the classes $6-10,11-15,16-20$. We know that in such a case the classes are made continuous.

For this, in the first table, the lower class limits are reduced by 0.5 and the upper class limits are increased by 0.5 and the second table is prepared. In the second table, the score 15.5 is placed in the class 15.5-20.5.

Note that if the method of making groups is changed, the frequency distribution may change.

## Let's remember!

In the above table, the class mark of $6-10$ is $=\frac{6+10}{2}=\frac{16}{2}=8$;
Similarly, the class mark of $5.5-10.5$ is $=\frac{5.5+10.5}{2}=\frac{16}{2}=8$.
This shows that, if the classes are made continuous, the class marks do not change

Solved Example :
The following table shows frequency distribution of marks of 100 students of $10^{\text {th }}$ class which they obtained in a practice examination. Find the median of the marks.

| Marks in exam | $0-20$ | $20-40$ | $40-60$ | $60-80$ | $80-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 4 | 20 | 30 | 40 | 6 |

Solution : $\mathrm{N}=100$
$\therefore \frac{N}{2}=50$. Hence the $50^{\text {th }}$ number will be the approximate median. Hence we have to find out the class which contains the $50^{\text {th }}$ term. Writing the cumulative frequencies less than the upper limit, we can find it.

So, let us prepare less than cumulative frequency distribution table.

| Class <br> (Student's marks ) | No. of students <br> $f i$ | Cumulaive frequency <br> less than the <br> upper limit <br> cf |
| :---: | :---: | :---: |
| $0-20$ | 4 | 4 |
| $20-40$ | 20 | 24 |
| $40-60$ | 30 | 54 |
| $60-80$ | 40 | 94 |
| $80-100$ | 6 | 100 |

- From the table, the $50^{\text {th }}$ score is in the class $40-60$. The class which contains the median, is called the median class. So, here $40-60$ is the median class.
- The lower class limit of $40-60$ is 40 . Its frequency is 30 .
- Out of the first 50 scores, 24 scores are less than 40 . The remaining $50-24=26$ are in class $(40-60)$. The $50^{\text {th }}$ score in that class is estimated as follows.
- 26 out of 30 scores in the class $40-60$, are upto the $50^{\text {th }}$ score and the class interval is 20 . So it is assumed that, the $50^{\text {th }}$ score is more than 40 by $\frac{26}{30} \times 20$.
$\therefore$ it is approximately $40+\frac{26}{30} \times 20=40+\frac{52}{3}=57 \frac{1}{3}$.
$\therefore$ median $=57 \frac{1}{3}$
- We can formulate this as follows,

$$
\text { Median }=\mathbf{L}+\left[\frac{\frac{N}{2}-c f}{f}\right] \times h
$$

In the formula,
$\mathrm{L}=$ Lower class limit of the median class,
$N=$ Sum of frequencies
$\mathrm{h}=$ Class interval of the median class,
$f=$ Frequency of the median class
cf = Cumulative frequency of the class preceding the median class. In the above example; $\frac{N}{2}=50, \mathrm{cf}=24, \mathrm{~h}=20, \mathrm{f}=30, \mathrm{~L}=40$,

$$
\begin{aligned}
\text { Median } & =\mathrm{L}+\left[\frac{\frac{N}{2}-c f}{f}\right] \times h \ldots(\text { Formula }) \\
& =40+\left(\frac{50-24}{30}\right) \times 20 \\
& =40+\frac{26 \times 20}{30} \\
& =40+17 \frac{1}{3} \\
& =57 \frac{1}{3}
\end{aligned}
$$

## Let's remember!

$\downarrow$ If the given classes are not continuous, we have to make them continuous to find out the median.

- It is difficult to write the scores in the asscending order when the number of scores is large. So the data is classified into groups. It is not possible to find the exact median of a classified data, but the approximate median is found by the formula.

$$
\text { Median }=\mathbf{L}+\left[\frac{\frac{N}{2}-c f}{f}\right] \times h
$$

## \& S S Solved Examples SS S

Ex. (1) Observe the following frequency distribution table. It shows the distances travelled by 60 public transport buses in a day. Find the median of the distance travelled.

| Daily distance travelled (in K m) | $200-209$ | $210-219$ | $220-229$ | $230-239$ | $240-249$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of buses | 4 | 14 | 26 | 10 | 6 |

Solution : (1) The classes in the table are not continuous.
The upper class limit of a class and the lower class of its succeeding class differ by 1.
$\therefore$ Let us subtract $1 \div 2=0.5$ from the lower class limit of each class and add to the upper class limit of each class, and make the classes continuous.
(2) Make a column of cumulative frequency 'less than' in the new table showing the continuous classes.

| Given <br> Class | Continuous <br> classes | Frequency <br> $\mathrm{f}_{\mathrm{i}}$ | Cumulative frequency <br> less than |
| :---: | :---: | :---: | :---: |
| $200-209$ | $199.5-209.5$ | 4 | 4 |
| $210-219$ | $209.5-219.5$ | 14 | $18 \rightarrow \mathrm{cf}$ |
| $220-229$ | $219.5-229.5$ | $26 \rightarrow \mathrm{f}$ | 44 |
| $230-239$ | $229.5-239.5$ | 10 | 54 |
| $240-249$ | $239.5-249.5$ | 6 | 60 |

Here, total of frequencies $=\Sigma \mathrm{f}_{\mathrm{i}}=\mathrm{N}=60 \therefore \frac{\mathrm{~N}}{2}=30$.
$\therefore$ 30th score is the approximate median.
First 18 scores are less than 219.5 and the remaining, $30-18=12$ scores are in the class $219.5-229.5$. Therefore, 219.5-229.5 is the median class. The cumulative frequency of the class $219.5-229.5$ is 44 .
In the formula,
$\mathrm{L}=$ Lower class limit $=219.5, \mathrm{~h}=$ Class interval of the median class $=10$
cf $=$ The frequency of the class preceding the median class $=18$,
$f=$ The frequency of the median class $=26$
Median $=\mathbf{L}+\left[\frac{\frac{N}{2}-c f}{f}\right] \times h$

$$
\begin{aligned}
\therefore \text { M edian } & =219.5+\left(\frac{30-18}{26}\right) \times 10 \\
= & 219.5+\left(\frac{12 \times 10}{26}\right) \\
= & 219.50+4.62 \\
= & 224.12
\end{aligned}
$$

$\therefore$ The median of the distance travelled is $=224.12 \mathrm{Km}$
Ex. (2) The following table shows the ages of persons who visited a museum on a certain day. Find the median age of the persons visiting the museum.

| A ge (Y ears) | N o. of persons |
| :---: | :---: |
| Less than 10 | 3 |
| Less than 20 | 10 |
| Less than 30 | 22 |
| Less than 40 | 40 |
| Less than 50 | 54 |
| Less than 60 | 71 |

Solution : The given cumulative frequency table is of the 'less than' form. So, we will have to decide the true class limits first. We know that, the 'less than' cumulative frequency is associated with the upper class limits. The upper class limit of the first class is 10 . The age of any person is a positive number, so the first class must be $0-10$. The upper class limit of the next class is 20, so the second class must be 10-20. In this way, make the classes of interval 10. In this way the last class is 50-60. So the given table can now be rewritten as follows.

| A ge (years) | Class | No. of persons <br> (Frequency) | Cumulative frequency <br> Less than |
| :---: | :---: | :---: | :---: |
| Less than 10 | $0-10$ | 3 | 3 |
| Less than 20 | $10-20$ | $10-3=7$ | 10 |
| Less than 30 | $20-30$ | $22-10=12$ | $22 \rightarrow \mathrm{Cf}$ |
| Less than 40 | $30-40$ | $40-22=18 \rightarrow \mathrm{f}$ | 40 |
| Less than 50 | $40-50$ | $54-40=14$ | 54 |
| Less than 60 | $50-60$ | $71-54=17$ | 71 |

Here $\mathrm{N}=71 \therefore \frac{\mathrm{~N}}{2}=35.5$ and $\mathrm{h}=10$
The number 35.5 is in the class $30-40$, hence it is the median class. The cumulative frequency of its precending class is $22, \therefore \mathrm{cf}=22, \mathrm{~L}=30, \mathrm{f}=18$.

$$
\begin{aligned}
\text { Median } & =\mathbf{L}+\left[\frac{\frac{N}{2}-c f}{f}\right] \times h \\
& =30+(35.5-22) \frac{10}{18} \\
& =30+(13.5) \frac{10}{18} \\
& =30+7.5 \\
& =37.5
\end{aligned}
$$

$\therefore$ the median age of the persons visiting the museum is $=37.5$ years

## Practice Set 6.2

1. The following table shows classification of number of workers and the number of hours they work in a software company. Find the median of the number of hours they work.

| Daily No. of hours | $8-10$ | $10-12$ | $12-14$ | $14-16$ |
| :--- | :---: | :---: | :---: | :---: |
| Number of workers | 150 | 500 | 300 | 50 |

2. The frequency distribution table shows the number of mango trees in a grove and their yield of mangoes. Find the median of data.

| No. of M angoes | $50-100$ | $100-150$ | $150-200$ | $200-250$ | $250-300$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of trees | 33 | 30 | 90 | 80 | 17 |

3. The following table shows the classification of number of vehicles and their speeds on Mumbai-Pune express way. Find the median of the data.

| A verage Speed of <br> Vehicles $(\mathrm{Km} / \mathrm{hr})$ | $60-64$ | $64-69$ | $70-74$ | $75-79$ | $79-84$ | $84-89$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of vehicles | 10 | 34 | 55 | 85 | 10 | 6 |

4. The production of electric bulbs in different factories is shown in the following table. Find the median of the productions.

| No. of bulbs <br> produced (Thousands) | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ | $80-90$ | $90-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of factories | 12 | 35 | 20 | 15 | 8 | 7 | 8 |

## Mode for grouped frequency distribution

We know that the score repeating maximum number of times in a data is called the mode of the data.
For example, a company manufactures bicycles of different colours. To know which colour is most wanted, the company needs to know the mode. If a company manufactures many items, it may want to know which item sells most. In such cases, the mode is needed.

We have learnt the method of finding the mode of an ungrouped data.
Now let us study the method of estimation of mode of grouped data.
The following formula is used for the purpose.
Mode $=L+\left[\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right] \times \mathrm{h}$
In the above formula,

$$
\begin{aligned}
& L=\text { Lower class limit of the modal class. } \\
& f_{1}=\text { Frequency of the modal class. } \\
& f_{0}=\text { Frequency of the class preceding the modal class. } \\
& f_{2}=\text { Frequency of the class succeeding the modal class. } \\
& h=\text { Class interval of the modal class. }
\end{aligned}
$$

Let us see, with an example, how the mode is estimated using the above formula.

## SSSS Solved Examples $\mathscr{S}$ SSS

Ex.(1) The classification of children according to their ages, playing on a ground is shown in the following table. Find the mode of ages of the children.

| A ge-group of children <br> $(\mathrm{Y}$ rs $)$ | $6-8$ | $8-10$ | $10-12$ | $12-14$ | $14-16$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of children | 43 | $58 \rightarrow \mathrm{f}_{0}$ | $70 \rightarrow \mathrm{f}_{1}$ | $42 \rightarrow \mathrm{f}_{2}$ | 27 |

From the table, we note that the maximum number of children is of the age-group 10-12. So the modal class is 10-12

Solution : Here $f_{1}=70$, and modal class is 10-12.
$\therefore$ in the given example,
$\mathrm{L}=$ Lower class limit of the modal class $=10$
h = Class interval of the modal class $=2$
$\mathrm{f}_{1}=$ Frequency of the modal class $=70$
$\mathrm{f}_{0}=$ Frequency of the class preceding the modal class $=58$
$f_{2}=$ Frequency of the class succeeding the modal class $=42$
Mode $=L+\left[\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right] \times \mathrm{h}$
$=10+\left[\frac{70-58}{2(70)-58-42}\right] \times 2$
$=10+\left[\frac{12}{140-100}\right] \times 2$
$=10+\left[\frac{12}{40}\right] \times 2$
$=10+\frac{24}{40}$
$=10+0.6$
= 10.6
$\therefore$ the mode of the ages of children playing on the ground is 10.6 Y ears.

Ex. (2) The following frequency distribution table shows the classification of the number of vehicles and the volume of petrol filled in them. Find the mode of the volume.

| Petrol filled (Litre) | $1-3$ | $4-6$ | $7-9$ | $10-12$ | $13-15$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of vehicle | 33 | 40 | 27 | 18 | 12 |

Solution : The given classes are not continuous. So, let us make them continuous and rewrite the table.

| Class | Continuous classes | Frequency |
| :---: | :---: | :---: |
| $1-3$ | $0.5-3.5$ | $33 \rightarrow \mathrm{f}_{0}$ |
| $4-6$ | $3.5-6.5$ | $40 \rightarrow \mathrm{f}_{1}$ |
| $7-9$ | $6.5-9.5$ | $27 \rightarrow \mathrm{f}_{2}$ |
| $10-12$ | $9.5-12.5$ | 18 |
| $13-15$ | $12.5-15.5$ | 12 |

From the above table, the modal class is $3.5-6.5$

$$
\begin{aligned}
\text { Mode } & =L+\left[\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}}\right] \times \mathrm{h} \\
\text { Mode } & =3.5+\left[\frac{40-33}{2(40)-33-27}\right] \times \mathrm{h} \\
& =3.5+\left[\frac{7}{80-60}\right] \times 3 \\
& =3.5+\frac{21}{20} \\
& =3.5+1.05 \\
& =4.55
\end{aligned}
$$

$\therefore$ The mode of the volume of petrol filled is $=4.55$ litre.

## Practice Set 6.3

1. The following table shows the information regarding the milk collected from farmers on a milk collection centre and the content of fat in the milk, measured by a lactometer. Find the mode of fat content.

| Content of fat (\%) | $2-3$ | $3-4$ | $4-5$ | $5-6$ | $6-7$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| M ilk collected (Litre) | 30 | 70 | 80 | 60 | 20 |

2. Electricity used by some families is shown in the following table. Find the mode for use of electricity.

| Use of electricity <br> (Unit) | $0-20$ | $20-40$ | $40-60$ | $60-80$ | $80-100$ | $100-120$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| N o. of families | 13 | 50 | 70 | 100 | 80 | 17 |

3. Grouped frequency distribution of supply of milk to hotels and the number of hotels is given in the following table. Find the mode of the supply of milk.

| M ilk (Litre) | $1-3$ | $3-5$ | $5-7$ | $7-9$ | $9-11$ | $11-13$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of hotels | 7 | 5 | 15 | 20 | 35 | 18 |

4. The following frequency distribution table gives the ages of 200 patients treated in a hospital in a week. Find the mode of ages of the patients.

| A ge (years) | Less than 5 | $5-9$ | $10-14$ | $15-19$ | $20-24$ | $25-29$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| N o. of patients | 38 | 32 | 50 | 36 | 24 | 20 |

## Activity :-

- Find the mean weight of 20 students in your class.
- Find the mode of sizes of shirts of students in your class
- Every student in your class should measure his/her own pulse rate, note the pulse rates of all students and find the mode of the pulse rate.
- Measure the height of every student in the class, prepare a grouped frequency distribution table and find the median of the heights.

## Let's remember!

We have studied the central tendencies mean, median and mode. Before selecting any of these measures, we have to know the purpose of its selection clearly.

Suppose, we have to judge the performance of five divisions of standard 10 in the internal examination. For the purpose, we have to find the 'mean' of marks of students in each division.

If we have to make two groups of students in a division based on their marks in the examination, we have to find the 'median' of their marks

If a 'bachat' group producing chalks wants to know about the colour of chalks having maximum demand, it will have to choose the 'mode'.

## Pictorial representation of statistical data

The mean, median or mode of a numerical data or analysis of the data is useful to draw some useful inferences.

We know that tabulation is one of the methods of representing numerical data in brief. But a table does not quickly reveal some aspects of the data. A common man is interested in the important aspects of a data. For example, annual budget, information about a game, etc. Let us think of another way of data representation for the purpose.

## Presentation of data

Pictorial and graphical presentation are attractive methods of data interpretation. The tree chart below shows different methods of data interpretation.

We have studied some of these methods and graphs in previous standards. Now we will learn a histogram, a frequency polygon and a pie diagram.

Florence Nightingale (1820-1910) The lady is considered as an idol in the field of nursing. She was devoted to the work of caring for the wounded and the sick. In the crimean war, she nursed wounded soldiers and saved their lives. She is also known for her fundamental work is the field of statistics. She kept a systematic record of the conditions of wounded soldiers, treatments given to them and
 the results of the treatments and deduced important conclusions. The cause of the death of soldiers was more often a disease like typhoid or cholera and not the wounds in the war. The causes of the diseases were lack of cleanliness of the surronding, polluted water and crowded dwelling of the patients. Florence exhibited the information in the form of graphs, and pie charts to convince the people. She showed that proper treatments and observing the rules of cleanliness decreases the death rate considerably. The municipalities accepted her observations, that to maintain the hygiene of town, good drainage system and clean drinking water for everyone are necessary. Her work established that systematic records and the statistical methods are useful in drawing reliable inferences.

## Let's learn.

Histogram
Study the following example to know about a histogram and how to draw it.

Ex : $\quad$ The table below shows the net asset value (NAV) per unit of mutual funds of some companies.
Draw a histogram representing the information.

| NAV (₹) | $8-9$ | $10-11$ | $12-13$ | $14-15$ | $16-17$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of mutual <br> funds | 20 | 40 | 30 | 25 | 15 |

Solution : The given classes are not continuous. Lets make the classes continuous.

| Continuous Classes | $7.5-9.5$ | $9.5-11.5$ | $11.5-13.5$ | $13.5-15.5$ | $15.5-17.5$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 20 | 40 | 30 | 25 | 15 |

Classes
fig 6.1
Method of drawing a histogram :

1. If the given classes are not continuous, make them continuous. Such classes are called extended class intervals.
2. Show the classes on the $X$ - axis with a proper scale.
3. Show the frequencies of the $Y$ - axis with a proper scale.
4. Taking each class as the base, draw rectangles with heights proportional to the frequencies.

## Note:

On the $X$-axis, a mark '-ـ-' is called the krink mark and it is shown between the origin and the first class. It means, there are no observations upto the first class. The mark can be used on the $Y$ - axis also, if needed. This enables us to draw a graph of optimum size.

## Practice Set 6.4

1. Draw a histogram of the following data.

| Height of student (cm) | $135-140$ | $140-145$ | $145-150$ | $150-155$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of students | 4 | 12 | 16 | 8 |

2. The table below shows the yield of jowar per acre. Show the data by histogram.

| Y ield per acre (quintal) | $2-3$ | $4-5$ | $6-7$ | $8-9$ | $10-11$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of farmers | 30 | 50 | 55 | 40 | 20 |

3. In the following table, the investment made by 210 families is shown. Present it in the form of a histogram.

| Investment <br> (Thousand Rupees) | $10-15$ | $15-20$ | $20-25$ | $25-30$ | $30-35$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of families | 30 | 50 | 60 | 55 | 15 |

4. Time alloted for the preparation of an examination by some students is show $n$ in the table. Draw a histogram to show the information.

| Time (minutes) | $60-80$ | $80-100$ | $100-120$ | $120-140$ | $140-160$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 14 | 20 | 24 | 22 | 16 |

## Let's learn.

## Frequency polygon

The information in a frequency table can be presented in various ways. We have studied a histogram. A frequency polygon is another way of presentation.

Let us study two methods of drawing a frequency polygon.
(1) With the help of a histogram (2) Without the help of a histogram.
(1) We shall use the histogram in figure 6.1 to learn the method of drawing a frequency polygon.

Fig. 6.2

1. $M$ ark the mid - point of upper side of each rectangle in the histogram.
2. A ssume that a rectangle of zero height exists preceeding the first rectangle and mark its mid-point. Similarly, assume a rectangle succeeding the last rectangle and mark its mid-point.
3. Join all mid-points in order by line segments.

The closed figure so obtained is the frequency polygon.
(2) Observe the following table. It shows how the coordinates of points are decided to draw a frequency polygon, without drawing a histogram.

| Class | Continuous class | Class mark | Frequency | Coordinates of points |
| :---: | :---: | :---: | :---: | :---: |
| $6-7$ | $5.5-7.5$ | 6.5 | 0 | $(6.5,0)$ |
| $8-9$ | $7.5-9.5$ | 8.5 | 20 | $(8.5,20)$ |
| $10-11$ | $9.5-11.5$ | 10.5 | 40 | $(10.5,40)$ |
| $12-13$ | $11.5-13.5$ | 12.5 | 30 | $(12.5,30)$ |
| $14-15$ | $13.5-15.5$ | 14.5 | 25 | $(14.5,25)$ |
| $16-17$ | $15.5-17.5$ | 16.5 | 15 | $(16.5,15)$ |
| $18-19$ | $17.5-19.5$ | 18.5 | 0 | $(18.5,0)$ |

The points corresponding to the coordinates in the fifth column are plotted. Joining them in order by line segments, we get a frequency polygon. The polygon is shown in figure 6.3. Observe it.

S\&\& Solved Examples $\mathscr{S}$ S\&

Ex. (1) Answer the following questions based on the frequency polygon given in the adjacent figure.
(1) W rite frequency of the class 50-60.
(2) State the class whose frequency is 14.
(3) State the class whose class mark is 55.
(4) W rite the class in which the frequency is maximum.
(5) W rite the classes whose frequencies are zero.

## Solution :

(1) The class marks are on the $X$ - axis. The point whose $X$ - coordinate is 55 (as the mid - point of the class $50-60$ is 55.) $y$-coordinate is 10 . So, the frequency of the class 50-60 is 10 .
(2) The frequencies are shown on the Y-axis. The $X$-coordinate of the point whose $y$-coordinate is 14 , is 25 . N ote the mark 14 on the $Y$-axis. The class mark of the class 20-30 is 25 . Hence, the frequency of the class $20-30$ is 14 .
(3) The class mark of the class $50-60$ is 55.
(4) The frequency is shown on the Y-axis. On the polygon the maximum value of the $y$-coordinate is 20 . Its corresponding $X$-coordinate is 35 , which is the mark of the class 30-40. Therefore, the maximum frequency is in the class 30-40.
(5) The frequencies of the classes $0-10$ and $60-70$ are zero.

Ex. (2) The following table shows the weights of children and the number of children. Draw a frequency polygon showing the information.

| W eight of children (kg) | $18-19$ | $19-20$ | $20-21$ | $21-22$ | $22-23$ | $23-24$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of children | 4 | 13 | 15 | 19 | 17 | 6 |

Let us prepare a table showing the co-ordinates necessary to draw a frequency polygon.

| Class | $18-19$ | $19-20$ | $20-21$ | $21-22$ | $22-23$ | $23-24$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Class mark | 18.5 | 19.5 | 20.5 | 21.5 | 22.5 | 23.5 |
| Frequency | 4 | 13 | 15 | 19 | 17 | 6 |
| Coordinates <br> of points | $(18.5,4)$ | $(19.5,13)$ | $(20.5,15)$ | $(21.5,19)$ | $(22.5,17)$ | $(23.5,6)$ |

Fig. 6.5

Class mark (W eight-kg)

## Practice Set 6.5

1. Observe the following frequency polygon and write the answers of the questions below it.

Marks
fig 6.6
(1) Which class has the maximum number of students?
(2) W rite the classes having zero frequency.
(3) W hat is the class-mark of the class, having frequency of 50 students?
(4) W rite the lower and upper class limits of the class whose class mark is 85 .
(5) How many students are in the class $80-90$ ?
2. Show the following data by a frequency polygon.

| Electricity bill (₹) | $0-200$ | $200-400$ | $400-600$ | $600-800$ | $800-1000$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Families | 240 | 300 | 450 | 350 | 160 |

3. The following table shows the classification of percentages of marks of students and the number of students. Draw a frequency polygon from the table.

| R esult <br> (Percentage) | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ | $80-90$ | $90-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| N o. of students | 7 | 33 | 45 | 65 | 47 | 18 | 5 |

## Let's recall.

## Pie diagram

In the previous standards, we have seen the following figures in Geography and Science. Such graphs are called pie diagrams.

Proportion of land and water on the earth

Proportion of
constituents of air
fig 6.7
In a pie diagram, the numerical data is shown in a circle. Different components of a data are shown by proportional sectors of the circle.

In figure 6.8, seg $O A$ and seg $O B$ are radii of a circle with centre O .
$\angle \mathrm{AOB}$ is the central angle.
The shaded region O -AXB is a sector of the circle.

fig 6.8

## Let's learn.

## Reading of Pie diagram

The following example illustrates how a pie chart gives information at a glance.
120 students of standard 10 were asked which game they like. The information obtained is shown in the adjacent pie diagram. Answers to the question as'Which game is liked the most'
'W hat percentage of students like kho-kho?' 'W hat percentage of students like kabaddi?'

fig 6.9 can be obtained from the pie diagram at a glance.

Observe one more pie diagram.
Figure 6.10 shows the annual financial planning of a school. From the pie diagram we see that

- $45 \%$ of the amount is reserved for educational equipment.
- $35 \%$ of the amount is shown for games.
- $10 \%$ of the amount is kept for sanitation.
- $10 \%$ of the amount is reserved for environment.

fig 6.10

In this way, we get information at a glance from a pie diagram.
Let us have more information about a pie diagram.
Many times we find information of different types in newspapers given in the form of pie diagrams. For example, the annual budget, performance of different nations in olympic games, etc.

Now we shall see, by examples, how to interpret the information from a pie diagram.

## Example:

As deduced from a survey, the classification of skilled workers is shown in the pie diagram (fig 6.11). If the number of workers in the production sector is 4500, answer the following questions.

fig 6.11
(i) W hat is the total number of skilled workers in all fields?
(ii) W hat is the number of skilled workers in the field of constructions?
(iii) How many skilled workers are in agriculture?
(iv) Find the difference between the numbers of workers in the field of production and construction.

Solution : (i) Suppose, the total number of skilled workers in all fields is $x$.
$\therefore$ the central angle for x persons is $=360^{\circ}$
Central angle for number of persons in production field

$$
\begin{aligned}
& =\frac{\text { Number of persons in production field }}{x} \times 360 \\
\therefore 90 & =\frac{4500}{x} \times 360 \\
\therefore x & =18000
\end{aligned}
$$

$\therefore$ total number of skilled workers in all the fields together $=18000$.
(ii) The angle shown for construction sector $=72^{\circ}$.

$$
\therefore 72=\frac{\text { Number of persons in construction }}{18000} \times 360
$$

$\therefore$ number of persons in construction field $=\frac{72 \times 18000}{360}$

$$
=3600
$$

(iii) The central angle for agriculture field is $24^{\circ}$.

$$
\begin{aligned}
\therefore 24 & =\frac{\text { Number of workers in agriculture }}{\text { total skilled workers }} \times 360 \\
24 & =\frac{\text { Number of workers in agriculculture }}{18000} \times 360
\end{aligned}
$$

$\therefore$ number of workers in agriculture $=\frac{24 \times 18000}{360}$
(iv) The difference between angles relating fields of production and construction

$$
=90^{\circ}-72^{\circ}=18^{\circ} .
$$

$\therefore$ The difference between the central angles $=$
$\frac{\text { Difference between numbres of workers in the fields }}{\text { Total number of skilled workers }} \times 360$
$18=\frac{\text { Difference between the numbers of workers in the fields }}{18000} \times 360$
Difference between the numbers of workers in the two fields $=\frac{18 \times 18000}{360}$

$$
=900
$$

## Let's remember!

- Every component of a data is shown by a sector associated with it.
- The measure of the central angle of the sector is in proportion with the number of scores in that component.
The measure of central angle $(\theta)=\frac{\text { Number of scores in component }}{\text { Total number of scores }} \times 360^{\circ}$
- A circle of suitable radius should be drawn. Divide the circle in sectors such that the measure of central angle of each sector is proportional to the number of scores in its corresponding component in the data.

## Let's learn.

## To draw a Pie diagram

We have seen how to read a pie diagram. Now let us learn to draw it.

1. To draw a pie diagram, the whole circle is divided into sectors proportional to the components of the data
2. The measure of central angle of each sector is found by the following formula.

The measure of central angle of sector $\theta$

$$
=\frac{\text { Number of scores in the components }}{\text { Total number of scores }} \times 360
$$

A circle of a suitable radius is drawn. Then it is divided into sectors such that, the number of sectors is equal to the number of components in the data.

Let us understand the method through examples.

## SSSSS Solved Examples $\mathscr{E}$ SSS

Ex. (1) In a bicycle shop, number of bicycles purchased and choice of their colours was as follows. Find the measures of sectors of a circle to show the information by a pie diagram.
Solution : In all 36 bicycles were purchased. Out of them 10 bicycles were white coloured.
$\therefore$ the measure of sector showing white coloured bicycles

$$
\begin{aligned}
& =\frac{\text { Number of white bicycles }}{\text { Total number of bicycles }} \times 360 \\
& \quad=\frac{10}{36} \times 360=100
\end{aligned}
$$

The measures of angles of sector relating to bicycles of other colours can be calculated similarly which are shown in

| Colour | Number of <br> bicycles | Central angle of <br> the sector |
| :---: | :---: | :---: |
| White | 10 | $\frac{10}{36} \times 360^{\circ}=100^{\circ}$ |
| Black | 9 | $\frac{9}{36} \times 360^{\circ}=90^{\circ}$ |
| Blue | 6 | $60^{\circ}$ |
| Grey | 7 | $70^{\circ}$ |
| Red | 4 | $40^{\circ}$ |
| Total | 36 | $360^{\circ}$ | the adjacent table.

Ex. (2) The following table shows the daily supply of electricity to different places in a town. Show the information by a pie diagram.

| Places | Factories | Houses | Roads | Shops | Offices | Others |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Supply of electricity <br> (Thousand units) | 24 | 14 | 7 | 5 | 6 | 4 |

Solution : The total supply of electricity is 60,000 units. Let us find the measures of central angles and show in the table.

| Supply of electricity | Unit | M easure of central angle |
| :---: | :---: | :---: |
| Factories | 24 | $\frac{24}{60} \times 360=144^{\circ}$ |
| Houses | 14 | $\frac{14}{60} \times 360=84^{\circ}$ |
| Roads | 7 | $\frac{7}{60} \times 360=42^{\circ}$ |
| Shops | 5 | $\frac{5}{60} \times 360=30^{\circ}$ |
| Offices | 6 | $\frac{6}{60} \times 360=36^{\circ}$ |
| Others | 4 | $\frac{4}{60} \times 360=24^{\circ}$ |
| Total | 60 | $360^{\circ}$ |

fig 6.12

Steps of drawing pie chart :
(1) A s shown in the figure, a circle and a radius is drawn. Then the sectors having measures of angles in the table, $\left(144^{\circ}, 84^{\circ}, 42^{\circ}, 30^{\circ}, 36^{\circ}\right.$, and $24^{\circ}$ ) were drawn one by one, in the clockwise direction. (While drawing the sectors one by one, we can change their order.)
(2) The components of the data were recorded in the sectors.

## Activity :

The monthly expenditure of a family on different items is shown in the following table. Calculate the related central angles and draw a pie chart.

| Different <br> items | Percentage of <br> expenditure | M easure of central angle |
| :---: | :---: | :---: |
| Food | 40 | $\frac{40}{100} \times 360=\square$ |
| Cloting | 20 | $\square \times \square=\square$ |
| House rent | 15 | $\square \times \square=\square$ |
| Education | 20 | $\square \times \square$ |
| Expenditure | 05 | $\square \times \square$ |
| Total | 100 |  |

## Practice Set 6.6

1. The age group and number of persons, who donated blood in a blood donation camp is given below. Draw a pie diagram from it.

| A ge group (Y rs) | $20-25$ | $25-30$ | $30-35$ | $35-40$ |
| :--- | :---: | :---: | :---: | :---: |
| N o. of persons | 80 | 60 | 35 | 25 |

2. The marks obtained by a student in different subjects are shown. Draw a pie diagram showing the information.

| Subject | English | M arathi | Science | M athematics | Social science | Hindi |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| M arks | 50 | 70 | 80 | 90 | 60 | 50 |

3. In a tree plantation programme, the number of trees planted by students of different classes is given in the following table. D raw a pie diagram showing the information.

| Standard | 5 th | 6 th | 7 th | 8 th | 9 th | 10 th |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of trees | 40 | 50 | 75 | 50 | 70 | 75 |

4. The following table shows the percentages of demands for different fruits registered with a fruit vendor. Show the information by a pie diagram.

| Fruits | M ango | Sweet lime | A pples | Cheeku | Oranges |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Percentages of demand | 30 | 15 | 25 | 20 | 10 |

5. The pie diagram in figure 6.13 shows the proportions of different workers in a town. A nswer the following questions with its help.

fig 6.13
(1) If the total workers is 10,000 ; how many of them are in the field of construction?
(2) How many workers are working in the administration?
(3) W hat is the percentage of workers in production?
6. The annual investments of a family are shown in the adjacent pie diagram. Answer the following questions based on it.
(1) If the investment in shares is ₹ 2000/, find the total investment.
(2) How much amount is deposited in bank?
(3) How much more money is invested in immovable property than in mutual fund?
(4) How much amount is invested in post?

fig 6.14

## Miscellaneous Problems - 6

1. Find the correct answer from the alternatives given.
(1) The persons of O-blood group are $40 \%$. The classification of persons based on blood groups is to be shown by a pie diagram. What should be the measures of angle for the persons of O - blood group?
(A) $114^{\circ}$
(B) $140^{\circ}$
(C) $104^{\circ}$
(D) $144^{\circ}$
(2) Different expenditures incurred on the construction of a building were shown by a pie diagram. The expenditure ₹ 45,000 on cement was shown by a sector of central angle of $75^{\circ}$. W hat was the total expenditure of the construction?
(A) $2,16,000$
(B) 3,60,000
(C) $4,50,000$
(D) $7,50,000$
(3) Cumulative frequencies in a grouped frequency table are useful to find . . .
(A) M ean
(B) M edian
(C) M ode
(D) All of these
(4)Theformulatofindmean froma groupedfrequency tableis $\bar{X}=A+\frac{\sum f_{i} u_{i}}{\sum f_{i}} \times h g$
In the formula $u_{i}=\ldots$
(A) $\frac{\mathrm{X}_{\mathrm{i}}+\mathrm{A}}{q}$
(B) $\left(\mathrm{X}_{\mathrm{i}}-\mathrm{A}\right)$
(C) $\underline{x_{i}-A}$
(D) $\frac{\mathrm{A}-\mathrm{X}_{\mathrm{i}}}{g}$

| Distance Covered per litre (km) | $12-14$ | $14-16$ | $16-18$ | $18-20$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of cars | 11 | 12 | 20 | 7 |

(5)

The median of the distances covered per litre shown in the above data is in the group . . . . . .
(A) 12-14
(B) 14-16
(C) 16-18
(D) 18-20
(6)

| No. of trees planted by each student | $1-3$ | $4-6$ | $7-9$ | $10-12$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of students | 7 | 8 | 6 | 4 |

The above data is to be shown by a frequency polygon. The coordinates of the points to show number of students in the class 4-6 are . . . .
(A) $(4,8)$
(B) $(3,5)$
(C) $(5,8)$
(D) $(8,4)$
2. The following table shows the income of farmers in a grape season. Find the mean of their income.

| Income <br> (Thousand Rupees) | $20-30$ | $30-40$ | $40-50$ | $50-60$ | $60-70$ | $70-80$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Farmers | 10 | 11 | 15 | 16 | 18 | 14 |

3. The loans sanctioned by a bank for construction of farm ponds are shown in the following table. Find the mean of the loans.

| Loan (Thousand rupees) | $40-50$ | $50-60$ | $60-70$ | $70-80$ | $80-90$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of farm ponds | 13 | 20 | 24 | 36 | 7 |

4. The weekly wages of 120 workers in a factory are shown in the following frequency distribution table. Find the mean of the weekly wages.

| W eekly wages <br> (Rupees) | $0-2000$ | $2000-4000$ | $4000-6000$ | $6000-8000$ |
| :---: | :---: | :---: | :---: | :---: |
| No. of workers | 15 | 35 | 50 | 20 |

5. The following frequency distribution table shows the amount of aid given to 50 flood affected families. Find the mean of the amount of aid.

| A mount of aid <br> (Thosand rupees) | $50-60$ | $60-70$ | $70-80$ | $80-90$ | $90-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of families | 7 | 13 | 20 | 6 | 4 |

6. The distances covered by 250 public transport buses in a day is shown in the following frequency distribution table. Find the median of the distances.

| Distance (km) | $200-210$ | $210-220$ | $220-230$ | $230-240$ | $240-250$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of buses | 40 | 60 | 80 | 50 | 20 |

7. The prices of different articles and demand for them is shown in the following frequency distribution table. Find the median of the prices.

| Price (Rupees) | 20 less than | $20-40$ | $40-60$ | $60-80$ | $80-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of articles | 140 | 100 | 80 | 60 | 20 |

8. The following frequency table shows the demand for a sweet and the number of customers. Find the mode of demand of sweet.

| W eight of sweet <br> (gram) | $0-250$ | $250-500$ | $500-750$ | $750-1000$ | $1000-1250$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of customers | 10 | 60 | 25 | 20 | 15 |

9. Draw a histogram for the following frequency distribution.

| Use of electricity <br> (U nit) | $50-70$ | $70-90$ | $90-110$ | $110-130$ | $130-150$ | $150-170$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of families | 150 | 400 | 460 | 540 | 600 | 350 |

10. In a handloom factory different workers take different periods of time to weave a saree. The number of workers and their required periods are given below. Present the information by a frequency polygon.

| No. of days | $8-10$ | $10-12$ | $12-14$ | $14-16$ | $16-18$ | $18-20$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of workers | 5 | 16 | 30 | 40 | 35 | 14 |

11. The time required for students to do a science experiment and the number of students is shown in the following grouped frequency distribution table. Show the information by a histogram and also by a frequency polygon.

| Time required for <br> experiment (minutes) | $20-22$ | $22-24$ | $24-26$ | $26-28$ | $28-30$ | $30-32$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 8 | 16 | 22 | 18 | 14 | 12 |

12. Draw a frequency polygon for the following grouped frequency distribution table.

| A ge of the donor <br> (Y rs.) | $20-24$ | $25-29$ | $30-34$ | $35-39$ | $40-44$ | $45-49$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of blood doners | 38 | 46 | 35 | 24 | 15 | 12 |

13. The following table shows the average rainfall in 150 towns. Show the information by a frequency polygon.

| A verage rainfall <br> $(\mathrm{cm})$ | $0-20$ | $20-40$ | $40-60$ | $60-80$ | $80-100$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of towns | 14 | 12 | 36 | 48 | 40 |

14. Observe the adjacent pie diagram. It shows the percentages of number of vehicles passing a signal in a town between 8 am and 10 am
(1) Find the central angle for each type of vehicle.
(2) If the number of two-wheelers is 1200 , find the number of all vehicles.

fig 6.15
15. The following table shows causes of noise pollution. Show it by a pie diagram.

| Construction | Traffic | A ircraft take offs | Industry | Trains |
| :---: | :---: | :---: | :---: | :---: |
| $10 \%$ | $50 \%$ | $9 \%$ | $20 \%$ | $11 \%$ |

16. A survey of students was made to know which game they like. The data obtained in the survey is presented in the adjacent pie diagram. If the total number of students are 1000,
(1) How many students like cricket?
(2) How many students like football?
(3) How many students prefer other games?

fig 6.16
17. Medical check up of 180 women was conducted in a health centre in a village. 50 of them were short of haemoglobin, 10 suffered from cataract and 25 had respiratory disorders. The remaining women were healthy. Show the information by a pie diagram.
18. On an environment day, students in a school planted 120 trees under plantation project. The information regarding the project is shown in the following table. Show it by a pie diagram.

| Tree name | Karanj | Behada | A rjun | Bakul | K adunimb |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of trees | 20 | 28 | 24 | 22 | 26 |

## Answers

## 1. Linear Equations In T wo V ariables

## Practice Set 1.1

2.

$(5)(3,1)$
4. (1) 22
(2) -1
(3) 13
5. 

(1) $\left(-\frac{2}{3}, 2\right)$
(2) $(1,4)$
(3) $\left(\frac{1}{2},-\frac{1}{2}\right)$
(4) $\left(\frac{7}{11}, \frac{116}{33}\right)$
(5) $(2,6)$
6. (1) $(6,-4)$
(2) $\left(-\frac{1}{4},-1\right)$
(3) $(1,2)$
(4) $(1,1)$
(5) $(2,1)$
7. (2) Tea; ₹300 per kg. sugar; ₹ 40 per kg.
(3) ₹100 notes 20
₹50 notes 10
(4) M anisha's age 23 years
(5) Skilled worker's wages ₹ 450 .
unskilled worker's wages ₹ 270.
(6) Hamid's speed $50 \mathrm{~km} / \mathrm{hr}$.

J oseph's speed 40 km/hr. Savita's age 8 years.

## 2. Quadratic E quations

## Practice Set 2.1

1. A ny equations of the type $\mathrm{m}^{2}+5 \mathrm{~m}+3=0, \mathrm{y}^{2}-3=0$
2. (1), (2), (4), (5) are quadratic equations.
3. (1) $y^{2}+2 y-10=0, \quad a=1, b=2, c=-10$
(2) $x^{2}-4 x-2=0, \quad a=1, b=-4, c=-2$
(3) $x^{2}+4 x+3=0, \quad a=1, b=4, c=3$
(4) $\mathrm{m}^{2}+0 \mathrm{~m}+9=0, a=1, b=0, c=9$
(5) $6 p^{2}+3 p+5=0, a=6, b=3, c=5$
(6) $x^{2}+0 x-22=0, a=1, b=0, c=-22$
4. (1) 1 is a root, -1 is not. (2) $\frac{5}{2}$ is a root, 2 is not.
5. $k=3$
6. $k=-7$

## Practice Set 2.2

1. (1) 9,6
(2) $-5,4$
(3) $-13,-\frac{1}{2}$
(4) $5,-\frac{3}{5}$
(5) $\frac{1}{2}, \frac{1}{2}$
(6) $\frac{2}{3},-\frac{1}{2}$
(7) $-\frac{5}{\sqrt{2}},-\sqrt{2}$
(8) $\frac{\sqrt{2}}{\sqrt{3}}, \frac{\sqrt{2}}{\sqrt{3}}$
(9) $25,-1$
(10) $-\frac{3}{5}, \frac{3}{5}$
(11) 0,3
(12) $-\sqrt{11}, \sqrt{11}$

## Practice Set 2.3

1. (1) $4,-5$
(2) $(\sqrt{6}-1),(-\sqrt{6}-1)$
(3) $\frac{\sqrt{13}+5}{2}, \frac{-\sqrt{13}+5}{2}$
(4) $\frac{\sqrt{2}+2}{3}, \frac{-\sqrt{2}+2}{3}$
(5) $-2,-\frac{5}{2}$
(6) $\frac{2+\sqrt{39}}{5}, \frac{2-\sqrt{39}}{5}$

## Practice Set 2.4

1. (1) $1,-7,5(2) 2,-5,5(3) 1,-7,0$
2. (1) $-1,-5$
(2) $\frac{3+\sqrt{17}}{2}, \frac{3-\sqrt{17}}{2}$
(3) $\frac{-1+\sqrt{22}}{3}, \frac{-1-\sqrt{22}}{3}$
(4) $\frac{2+\sqrt{14}}{5}, \frac{2-\sqrt{14}}{5}$
(5) $\frac{-1+\sqrt{73}}{6}, \frac{-1-\sqrt{73}}{6}$
(6) $-1,-\frac{8}{5}$
3. $-\sqrt{3},-\sqrt{3}$

## Practice Set 2.5

1. (1) Roots are distinct and real when $b^{2}-4 a c=5$, not real when $b^{2}-4 a c=-5$.
(2) $x^{2}+7 x+5=0$
(3) $\alpha+\beta=2, \alpha \times \beta=-\frac{3}{2}$
2. (1) $53(2)-55(3) 0$
3. (1) Real and equal.
(2) Real and unequal.
(3) Not real.
4. (1) $X^{2}-4 X=0$
(2) $X^{2}+7 X-30=0$
(3) $x^{2}-\frac{1}{4}=0$
(4) $X^{2}-4 X-1=0$
5. $k=3$
6. (1) 18
(2) 50
7. (1) $\mathrm{k}=12$ or $\mathrm{k}=-12(2) \mathrm{k}=6$

## Practice Set 2.6

1. 9 years 2.10 and 12 3. In vertical row 10 , in horizontal row 15 .
2. Kishor's present age is 10 years and Vivek's present age is 15 years
3. 10 marks
4. No. of pots 6 , production cost of each is ₹ 100 .
5. $6 \mathrm{~km} / \mathrm{hr}$
6. For Nishu 6 days, for Pintu 12 days.
7. Divisor $=9$, quotient $=51$
8. $\mathrm{AB}=7 \mathrm{~cm}, \mathrm{CD}=15 \mathrm{~cm}, \mathrm{AD}=\mathrm{BC}=5 \mathrm{~cm}$.

## Problem Set 2

1. (1) $\mathrm{B}(2) \mathrm{A}$ (3) C (4) B (5) B (6) D (7) C (8) C
2. (1) and (3) are quadratic equations.
3. (1) $-15(2) 1(3) 21$
4. $\mathrm{k}=3$
5. (1) $X^{2}-100=0$
(2) $X^{2}-2 X-44=0$
(3) $X^{2}-7 X=0$
6. (1) Not real.
(2) Real and unequal
(3) Real and equal
7. 

(1) $\frac{1+\sqrt{21}}{2}, \frac{1-\sqrt{21}}{2}$
(2) $\frac{1}{2},-\frac{1}{5}$ (3) $1,-4$
(4) $\frac{-5+\sqrt{5}}{2}, \frac{-5-\sqrt{5}}{2}$
(5) Roots are not real. (6) $(2+\sqrt{7}),(2-\sqrt{7})$
8. $\quad \mathrm{m}=14$
9. $\mathrm{X}^{2}-5 \mathrm{X}+6=0$
10. $x^{2}-4 p q x-\left(p^{2}-q^{2}\right)^{2}=0$
11. ₹ 100 with Sagar, ₹ 150 with Mukund.
12. 12 and $\sqrt{24}$ or 12 and $-\sqrt{24}$ 13. No. of students 60
14. Breadth 45 m . length 100 m , side of the pond 15 m .
15. For larger tap 3 hours and for smaller tap 6 hours.

## 3. Arithmetic Progression

## Practice Set 3.1

1. (1) Yes, $d=2$
(2) Yes, $d=\frac{1}{2}$
(3) Yes, $d=4$
(4) No
(5) Yes, $d=-4$
(6) Yes, $d=0$
(7) Yes, $d=\sqrt{2}$
(8) Yes, $d=5$
2. (1) $10,15,20,25$,
(2) $-3,-3,-3,-3, \ldots$
(3) $-7,-6.5,-6,-5.5, .$.
(4) $-1.25,1.75,4.75,7.75, \ldots$ (5) $6,3,0,-3 \ldots$
(6) $-19,-23,-27,-31$
3. (1) $a=5, d=-4$ (2) $a=0.6, d=0.3$ (3) $a=127, d=8$ (4) $a=\frac{1}{4}, d=\frac{1}{2}$

## Practice Set 3.2

1. (1) $d=7$ (2) $d=3$ (3) $a=-3, d=-5$ (4) $a=70, d=-10$
2. Yes. 121
3. 104
4. 115
5. -121
6. 180
7. 55
8. $55^{\text {th }}$
9. 60
10. 1

## Practice Set 3.3

1. 1215
2. 15252
3. 30450
4. 5040
5. 2380
6. 60
7. $4,9,14$ or $14,9,4$
8. $-3,1,5,9$

## Practice Set 3.4

1. ₹ 70455
2. First instalment ₹ 1000 , last instalment ₹ 560 .
3. ₹ $1,92,000$
4. 48,1242
5. $-20^{\circ},-25^{\circ},-30^{\circ},-35^{\circ},-40^{\circ},-45^{\circ}$ 6. 325

## Problem Set 3

1. (1) $\mathrm{B}(2) \mathrm{C}(3) \mathrm{B}(4) \mathrm{D}$ (5) B (6) C (7) C (8) $\mathrm{A}(9) \mathrm{A}(10) \mathrm{B}$
2. 40
3. $1,6,11, \ldots$
4. -195
5. $16,-21$
6. -1
7. 6,10
8. 8
9. $67,69,71$
10. $3,7,11, \ldots, 147$
11. ₹ 2000 .

## 4. Financial Planning

## Practice Set 4.1

1. CGST 6\%, SGST 6\% 2.SGST 9\%, GST 18\%
2. CGST ₹ 784 and SGST ₹ 784
3. The customer gets the belt for ₹ 691.48.
4. Taxable value of toy car is ₹ 1500 , CGST ₹ 135 , SGST ₹ 135
5. (1) Rate of SGST $14 \%$
(2) Rate of GST on AC $28 \%$
(3) Taxable value of $A C$ ₹ 40,000 .
(4) Total GST ₹ $11,200$.
(5) CGST ₹ 5600.
(6) SGST ₹ 5600 .
6. Prasad gets the washing machine for ₹ 48,640 and CGST ₹ 5320, SGST ₹ 5320 .

## Practice Set 4.2

1. Payable GST ₹ 22,000 .
2. Input Tax Credit for Nazama is ₹ 12,500 and her payable GST is ₹ 2250 .
3. A meer Enterprises : Payable GST ₹ 300 , payable CGST ₹ 150 , payable SGST ₹ 150 .
A kabari B rothers : payable GST ₹ 400, payable CGST ₹ 200, payable SGST ₹ 200.
4. Payable GST ₹ 100 so CGST ₹ 50 and UTGST ₹ 50. $5 . \operatorname{CGST}=$ SGST $=₹ 900$

## Practice Set 4.3

1. (1) $M V$ ₹ 100
(2) FV ₹ 75
(3) At discount of ₹ 5 .
2. $25 \%$
3. ₹ 37,040
4. 800 shares
5. R ate of return $5.83 \%$
6. Company A - more profitable.

## Practice Set 4.4

1. ₹ 200.60
2. ₹ 999
3. 

| No. of <br> shares | MV of <br> shares | Total <br> value | Brokerage <br> $0.2 \%$ | $9 \%$ <br> CGST on <br> brokerage | $9 \%$ <br> SGST on <br> brokerage | Total value <br> of shares |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 100 B | $₹ 45$ | $₹ 4500$ | $₹ 9$ | $₹ 0.81$ | $₹ 0.81$ | $₹ 4510.62$ |
| $75 \quad$ S | $₹ 200$ | $₹ 15000$ | $₹ 30$ | $₹ 2.70$ | $₹ 2.70$ | $₹ 14964.60$ |

4. No. of shares sold $=100$.
5. Loss of ₹ 8560 .

## Problem Set 4A

1. (1) $C$ (2) $B(3) D(4) B(5) A(6) B$
2. Total bill ₹ 28,800, CGST ₹ 3150, SGST ₹ 3150 .
3. ₹ 997.50
4. ₹ 12,500
5. ITC ₹ 4250 , payable tax ₹ 250
6. ITC ₹ 1550 , payable CGST ₹ 5030 , payable SGST ₹ 5030 .
7. Taxable value ₹ 75,000 , CGST ₹ 4500 , SGST ₹ 4500
8. (1) Wholesaler's tax invoice : CGST ₹ 16200; SGST ₹ 16200.

Retailer's tax invoice: CGST ₹ 19,800; SGST ₹ 19,800.
(2) W holesaler : payable CGST ₹ 2700 and payable SGST ₹ 2700 , Retailer : payable CGST ₹ 3600 and payable SGST ₹ 3600
9. (1) A nna Patil's invoice: CGST ₹ 1960, SGST ₹ 1960
(2) Trader in V asai : CGST ₹ 2352 and SGST ₹ 2352
(3) Trader in V asai : payable CGST ₹ 392 and payable SGST ₹ 392
10.
(1)

| Person | Payable CGST (₹) | Payable SGST (₹) | Payable GST (₹) |
| :---: | :---: | :---: | :---: |
| M anufacturer | 300 | 300 | 600 |
| Distributor | $360-300=60$ | 60 | 120 |
| Retailer | $390-360=30$ | 30 | 60 |
| Total Tax | 390 | 390 | 780 |

(2) Finally, the customer will get the article for ₹ 7280 .
(3) M anufacturer to distributor B2B, distributor to retailer B2B, retailer to customer B2C

## Problem Set 4B

1. (1) B
(2) B
(3) A
(4) C
(5) A
2. ₹ 130.39
3. $22.2 \%$
4. will get ₹ 21,000 .
5. Will get 500 shares. 6. Profit ₹ 1058.52
6. Company $B$, as returns are more
7. Will get 1000 shares. 9. ₹ 118 .
8. (1) ₹ $1,20,000$
(2) ₹ 360
(3) ₹ 64.80
(4) ₹ 120424.80 .
9. $1 \%$ profit
10. Probability

Practice Set 5.1

1. (1) $8(2) 7(3) 52(4) 11$

$$
\text { Practice Set } 5.2
$$

1. (1) $S=\{1 \mathrm{H}, 1 \mathrm{~T}, 2 \mathrm{H}, 2 \mathrm{~T}, 3 \mathrm{H}, 3 \mathrm{~T}, 4 \mathrm{H}, 4 \mathrm{~T}, 5 \mathrm{H}, 5 \mathrm{~T}, 6 \mathrm{H}, 6 \mathrm{~T}\} \mathrm{n}(\mathrm{S})=12$
(2) $\mathrm{S}=\{23,25,32,35,52,53\} \quad \mathrm{n}(\mathrm{S})=6$
2. $S=\{$ Red, Purple, Orange, Yellow, Blue, Green $\} \quad n(S)=6$
3. $\mathrm{S}=$ \{Tuesday, Sunday, Friday, Wednesday, Monday, Saturday\} $\mathrm{n}(\mathrm{S})=6$
4. (1) $\square$ (2) $\mathrm{G}_{1} \mathrm{G}_{2}$
(3)

$\square$
(4) $\mathrm{S}=\left\{\mathrm{B}_{1} \mathrm{~B}_{2}, \mathrm{~B}_{1} \mathrm{G}_{1}, \mathrm{~B}_{1} \mathrm{G}_{2}, \mathrm{~B}_{2} \mathrm{G}_{1}, \mathrm{~B}_{2} \mathrm{G}_{2}, \mathrm{G}_{1} \mathrm{G}_{2}\right\}$

## Practice Set 5.3

1. (1) $S=\{1,2,3,4,5,6\} \quad n(S)=6$

$$
\mathrm{A}=\{2,4,6\} \mathrm{n}(\mathrm{~A})=3, \quad \mathrm{~B}=\{1,3,5\} \mathrm{n}(\mathrm{~B})=3, \quad \mathrm{C}=\{2,3,5\} \quad \mathrm{n}(\mathrm{C})=3
$$

(2) $S=\{(1,1), \ldots,(1,6),(2,1), \ldots,(2,6),(3,1), \ldots,(3,6)$,

$$
(4,1), \ldots,(4,6),(5,1), \ldots,(5,6),(6,1), \ldots,(6,6)\} \quad n(S)=36
$$

$$
\mathrm{A}=\{(1,5)(2,4)(3,3)(4,2)(5,1)(6,6)\} \quad \mathrm{n}(\mathrm{~A})=6
$$

$$
B=\{(4,6)(5,5)(5,6)(6,4)(6,5)(6,6)\} \quad n(B)=6
$$

$$
\mathrm{C}=\{(1,1)(2,2)(3,3)(4,4)(5,5)(6,6)\} \quad \mathrm{n}(\mathrm{C})=6
$$

(3) $\mathrm{S}=\{\mathrm{HHH}, \mathrm{HHT}, \mathrm{HTT}, \mathrm{HTH}, \mathrm{THT}, \mathrm{TTH}, \mathrm{THH}, \mathrm{TTT}\} \mathrm{n}(\mathrm{S})=8$
$\mathrm{A}=\{\mathrm{HHH}, \mathrm{HHT}, \mathrm{HTH}, \mathrm{THH}\} \quad \mathrm{n}(\mathrm{A})=4$
$\mathrm{B}=\{\mathrm{TTT}\} \quad \mathrm{n}(\mathrm{B})=1$
$\mathrm{C}=\{\mathrm{HHH}, \mathrm{HHT}, \mathrm{THH}, \mathrm{THT}\} \quad \mathrm{n}(\mathrm{C})=4$

(3) $\frac{1}{5}$
16. $\frac{11}{36}$

## 6. Statistics

## Practice Set 6.1

(1) 4.36 hrs
(2) ₹ 521.43.
(3) 2.82 litre
(4) ₹ 35310
(5) ₹ 985 or ₹ 987.5 .
(6) ₹ 3070 or ₹ 3066.67 .

## Practice Set 6.2

(1) 11.4 hrs (2) 184.4 means 184 mangoes approximately (3) $74.558 \approx 75$ vehicles
(4) 52750 lamps

Practice Set 6.3

1. 4.33 litre
2. 72 unit
3. 9.94 litre
4. 12.31 years

## Practice Set 6.5

1. 

(1) $60-70$
(2) 20-30 and 90-100
(3) 55
(4) 80 and 90
(5) 15

Practice Set 6.6
5. (1) 2000 (2) 1000 (3) $25 \%$
6. (1) ₹ 12000 (2) ₹ 3000 (3) ₹ 2000 (4) ₹ 1000 .

Problem Set - 6

1. (1) $D$
(2) A
(3) B
(4) C
(5) C
(6) C
2. ₹ 52,500
3. ₹ 65,400
4. ₹ 4250
5. ₹ 72,400
6. 223.13 km .
7. ₹ 32
8. 397.06 gm
9. (1) Cars $-108^{\circ}$, Tempos $-43^{\circ}$, Buses $-29^{\circ}$, A uto-rickshaws $-36^{\circ}$,

Two wheelers $-144^{\circ}$
(2) Total number of vehicles -3000
16. (1) Cricket-225, (2) Football-175 (3) Other games- 200.

## Practical Notebook for Standard X Practical Notebook Cum Journal - Mathematics

- Based on Government approved syllabus and textbook
- Inclusion of practicals based on all chapters as per Evaluation scheme.
- With full of various activities, pictures, figures/ diagrams, etc.
- Inclusion of objective/multiple choice questions
- Inclusion of useful questions for oral examination
- More questions for practice and separate space for writing answers

## Practical notebooks are available for sale in the regional depots of the Textbook Bureau.
